THE SAN FRANCISCO MERCHANT

ESPECIALLY DEVOTED TO THE ENCOURAGEMENT OF THE

Productions, Manufactures and Commerce of the Pacific Coast.

VOL. XI. NO. 1. SAN FRANCISCO, OCTOBER 12, 1883. PRICE TEN CENTS.

THE PRICE OF WHEAT.

A Correspondent's Cheerful View of the Situation.

(From Bradstreet.)

Never in the history of the [illegible] has there [illegible] a time when the [illegible] of the [illegible] so difficult to understand. Mr. [illegible] Walker, the [illegible] of the New York Produce Exchange [illegible] estimates the probable wants of the importing countries for the harvest year 1883-4 at 313,000,000 bushels of wheat. He also estimates the available supplies from the export countries of [illegible] Europe and the rest of the world at 232,000,000 bushels of wheat, making a deficiency of supply of 81,000,000 bushels. This startling statement is [illegible] by the [illegible] for that No. 2 red wheat was selling in New York market on the 15th Sept. at $1.11 per bushel and English wheat at [illegible] per imperial quarter in the United Kingdom.

In the first place [illegible] note the position this country holds among the countries exporting wheat. In 1868 the export of wheat from countries that had a surplus to those countries that required to import was estimated at 120,000,000 bushels of wheat and wheat flour, of which, in 1868, the United States furnished in [illegible] exports 26,000,000.

In 1880, the [illegible] shipped by the export countries was estimated at 300,000,000 bushels of wheat; in 1880 the United States exported 184,000,000 bushels of wheat. In the coming crop year Mr. Walker estimates that the [illegible] surplus that will be shipped by the export countries will amount to 232,000,000 bushels, of which from the crop of 1883 the United States will ship 115,000,000 bushels.

It will be seen from the above that the export of wheat from this country from the crop of 1883 is estimated at 69,000,000 bushels less than what we exported in 1880, within 12,000,000 bushels of the estimated deficiency of the world's supply this season, so that if this country was able to export as much wheat as from the crop 1879-80 there would be nearly enough for the world's supply. Let us see how prices stood in England in 1868 and in 1880, and what the exports were from United States.

	Wheat and wheat flour in bushels	Price in United Kingdom per bushel
Exports for the year ending June 30, 1868, from United States to all countries	26,323,000	7s 11½d
Exports for year ending June 30, 1880, from United States to all countries	183,309,000	5s 6½d

From the above statement, as English [illegible] are a good [illegible] to [illegible] the [illegible] of Europe [illegible] seen at [illegible] which [illegible] when there is a light export from the United States, [illegible] at what prices it [illegible] Europe when [illegible] is a bad crop [illegible] heavy exports from the United States. Now, the question is, Where [illegible] wheat [illegible] for the year [illegible] 1884 [illegible] expect to export [illegible] 15,000,000 bushels of wheat.

Before [illegible] into this question of probable prices let me give [illegible] statement of our [illegible] exports [illegible] the [illegible] ending June 30, from 1868 to 1883, and prices in England, which may help to a solution of the range of prices.

	United States wheat and wheat flour in bushels	United Kingdom wheat per bushel
1868	26,323,000	[illegible]
1869	[illegible]	[illegible]
1870	[illegible]	[illegible]
1871	[illegible]	[illegible]
1872	[illegible]	[illegible]
1873	[illegible]	[illegible]
1874	[illegible]	[illegible]
1875	[illegible]	[illegible]
1876	[illegible]	[illegible]
1877	[illegible]	[illegible]
1878	[illegible]	[illegible]
1879	148,000,000	[illegible]
1880	18[illegible],000,000	[illegible]
1881	184,000,000	[illegible]
1882	118,000,000	[illegible]
1883	145,781,772	[illegible]
1884	[illegible],000,000	[illegible]

Estimated to Sept. [illegible]

It will be observed that I estimate the export of wheat from the United States from the crop of 1883 at 100,000,000 bushels, only [illegible] for the following reasons: First, I consider the United States wheat crop of 1882 over-estimated at 504,000,000 bushels. It was not, in my opinion, over 480,000,000 bushels, and is accounted for as follows:

		Bushels
Wheat crop of 1882		480,000,000
Seed for 36,000,000 acres	54,000,000	
Consumption 55,000,000 people, 4½ bushels each	247,500,000	
Export	14[illegible],500,000	
		445,000,000
For reserves		35,000,000

This makes the reserves at the commencement of harvest of 1883, 35,000,000 bushels above the normal reserve of August 1, 1882, which, like 1877, were as low as they could be after the bad wheat crops of 1876 and 1881. There must be a normal reserve to be carried over from all the crops, whether good or bad. The short wheat crop of 1881 left us at the beginning of the crop year 1882 with as small a reserve as we could hold in any year, which could not have been over 30,000,000 bushels, standing thus.

	Bush. wheat.
Low normal reserve August 1, 1882	30,000,000
Add surplus reserve of crop 1882-83	35,000,000
Total reserve August 1, 1883	65,000,000

I, therefore, in the second place, conclude that as 30,000,000 bushels wheat is the lowest normal reserve we can carry over, that 35,000,000 bushels is as much as can be added to increase the exports from the crop of 1883.

[illegible]

From the above tables it [illegible] seen that the [illegible] United Kingdom [illegible] the [illegible] years in the United States [illegible]

[illegible]

Fun and Fact.

[illegible]

DER WINE CROP.

The grape harvest and wine making in California, now completed in some districts and two-thirds through in others, indicates a crop somewhat less than last year's, or a little less than 10,000,000 gallons in place of 13,000,000. A number of new wine-yards come in this year for the first time, bearing from three-quarters of a ton to two tons, but many of our old full-bearing vineyards have failed this year from various causes to produce their usual crop by one-third and one-half, and sometimes by two-thirds. The latter, of course, are extreme cases, but most of these cases it was fine varieties, such as Riesling, that suffered. However, the new vineyards, being all of fine varieties, have made up for this, and the average of this year's vintage promises to exceed in quantity and nobility of variety anything California has hitherto produced. Moreover, each year our vintners become more proficient in their business and experience teaches them how to manage their wines, so as to produce the best results.

Next year, we may hope for an average crop from the old vineyards; those that bore this year for the first time should double their yield, and an immense acreage will bear fruit the first time. We shall not be overstating reasonable expectations if we place the total for 1884 at 15,000,000 gallons, or some 5,000,000 more than we have hitherto produced, but we should start the season 1885 so again with but any stock of old wine on hand and a great demand, and therefore, no doubt, fair average values need be expected in that season. There will, however, probably be greater difference in the price of the products of the several varieties, and of the several localities where they are grown. The tendency of straight Mission will be downward so with Malvasie grown in the low counties, Mountain Zinfandel will, or at least should, command higher prices than Valley Zinfandel. The wines from the fine flavored grapes of the sky-bearing foreign vines, recently so largely planted, will be sought after at prices remunerative to the grower. The problems that are now discussed with so much feeling between wine producers and wine dealers will naturally solve themselves. We shall have sound, wholesome but coarse wines at low prices for those whose tastes and pockets they suit, and we shall have noble wines at higher prices for another class of customers. As the grapes and wines from the coarser, heavy yielding vines decline in price, the grapes and wine from the finer varieties will advance. Thus, we shall extend the business at two times. We shall reach a class of customers for whom any of our wines have hitherto been too costly and reach another class, to whom price is no object, but whom we have not hitherto been able to satisfy in quality. Then, moreover, the day is approaching when, instead of a few thousand, two or three million gallons of two three and four-year old California wines will be found in dealers' hands here and in the East. When that day comes, the best of our California wines will rank in any country with the noble wines of the world. The big crops that may furnish supplies beyond the demands can hardly come earlier than 1885 or 1886 and, for one or two years, these may bring a strain on the market that may entail prices. But if our wine is good there is no fear of any permanent depression of values below the line of reasonable profits. Good matured wines have never been too plentiful in ancient or modern times. And when we do produce 30,000,000 gallons a year, and that is but a drop in a bucket of what Europe produces, California will consume one-half of it at home. We have only to consider the increasing trend here to drinking wine as a daily beverage in this State, and the remarkable figures as to home consumption by portion of our population, to recognize us great possibilities of future local demand.

ST. HELENA GRAPE CROP.

We hear from Mr Krug, of St. Helena, that his vineyard will yield as follows, and this is also a fair statement of what average other vineyards in his vicinity will yield. Zinfandel — first crop, tolerable, second crop, good if weather favors ripening. Riesling Mr. K. is sorry to say will be only one-third of a crop, and Malvasie only one-fourth but this latter is a less not so much regretted as if it had occurred to a more valuable variety. Gutedel, sometimes called Chasselas — good. Berger — good. Gray Riesling — good. Mataro — good. Chauché Noir, sometimes called Black Pinot or Black Riesling — good Black Burgundy — good Mission — good. The St. Helena wine producers have been giving $32 to $35 a ton for Zinfandel grapes delivered, and other grapes in proportion. The majority of the wine makers of Napa Valley are half through with the vintage.

THE NAPA VALLEY WINE CO.

The Napa Valley Wine Company, incorporated a few weeks ago, is making considerable progress, and promises to become a very prominent enterprise in our viticultural commerce. The stockholders held a meeting at the Wine Growers' Hall, St. Helena, on Saturday last, present: A. L. Tubbs, President, M. M Estee C Krug, Wm. Scheffler, H. A. Pellet, and W. W. Lyman Secretary. The by-laws as reported by the committee, with amendments were adopted; adjourned to meet next annual meeting, first Saturday in October, 1884

At a directors' meeting, immediately afterwards, the following committees were appointed. On trademark, certificates of stock and such books as are necessary for the Company, Chas. Krug, W. W. Lyman and M. M. Estee. On wines and supervision of all technical work in cellars of the Company, Chas. Krug, Wm. Scheffler and W. W. Lyman. On site for wine cellars, Wm. Scheffler, H. A. Pellet and W. W. Lyman.

The offer of Chas Krug to rent his cellar and cooperage sufficient for 400,000 gallons of wine, from January 1, 1884 to Aug. 15, 1884, for the sum of $100 per month, was accepted, and the meeting adjourned to Saturday, October 20.

M. M. Estee on Grape Picking, Resistent Vines, Etc.

In its report of a meeting of Napa grape-growers, the *Reporter* gives the interesting remarks of Mr. Estee, who briefly stated the result of his mission as a delegate at the State Viticultural Convention: In speaking of grape-picking he said it was the general opinion of experts that grape-growers in Napa Valley allowed their grapes to ripen too fully before they were picked. Very ripe grapes contain too much sugar, except the Berger, and, as a consequence, the wine so ontain an excess of alcoholic spirit. Grapes should be picked before perfect ripeness. The convention believed that vines should be pruned as close as in the general practice; three or four runners should be allowed to each vine. He favored staking vines—of course this practice entailed an additional expense, but the vine was benefitted by such support. He referred to the wild Riparia as a resistent stalk. It had been found to be so in Sonoma and also in France. It was not phylloxera proof in the sense that the grape louse would not attack it, but its juices seemed repugnant to the insects and they soon abandoned the Riparia. Prof. Chas. A. Wetmore and other experienced viticulturalists claim that the Vitis Californica is equally resistent with the Riparia, but equal success does not seem to attend the propagation and cultivation of the native wild vine. In the course of Mr. Estee's remarks he referred to a discovery purporting to be a way of ageing wines by electricity, and characterized it as an arrant fraud.

One of the oldest fruit distillers in California, and at one time foreman in the distillery of Otard, Dupruy & Co., Cognac, France, in which honse he served his apprenticeship, desires an engagement for the season as distiller. See advertisement.

Mr. Thomas Hardy, of Bankside Vine, yard, Adelaide, South Australia, who visited this State, three or four months ago, and examined the vineyards and wineries in several districts, especially in St. Helena, is writing his impressions at length for publication in Adelaide journals. The latest we have seen contains a detailed description of Mr. Thomaun's cellar and his methods of handling grapes and wine.

THE WINE MARKET.

(For Exports and Imports, see Merchandise Market.)

There is little wine of vintage of 1882 in the cellars of makers except that controlled by the Napa Wine Company and such makers as L. J. Rose, Jacob Schramm, Lefranc and others who job their own wines.

Vintage of 1882—

CEMENT—

Exports, 375 bbls lime.

The market here at present is supplied but prices are a point higher in consequence of the loss of the Cairnsmore with 7500 barrels for the Oregon market. Invoices of foreign brands to arrive by the next three vessels are all sold from first hands.

English Groceries—Crosse & Blackwell's Pickles, pts, $4; qts, $6 75; Olives, qts, $7; Lucca Oil, qts, $9 50; Sauces, $9 00 ₩ case. Jams, $4 00; Jellies, $5 00 ₩ doz; Fry's Chocolate, 50c ₩ lb; Cocoa, 45c ₩ lb; Colman's Mustard, 60c ₩ lb.

COAL—

Imports, 9117 tons Pacific Coast, 3610 tons Foreign and Eastern coal. Exports, 44 tons.

Notwithstanding the liberal arrivals of coals the past month, no tendency toward a decline has displayed itself; the explanation is simple. The consumption has kept pace with the importation, hence the yards show a light supply of all coal except Cumberland and Anthracite.

There is a disposition to advance prices this week somewhat, with every indication of success. The delay in getting Wellington to market aids the advance, the detention is caused by difficulty in procuring suitable miners to replace the strikers.

Coal freights from the East have been advanced, hence Cumberland and Anthracite will be sensibly affected by the change in the near future. Unless grain freights outward improve soon, coal freights inward must materially advance.

Importers prices of coal, Foreign and American, to arrive: Australian, $7@7¼; Liverpool Steam, $6⅝@$7; West Hartley, $8@8¼; Scotch Splint, $7½c; Cardiff Steam, $7@7 25; Lump Lehigh, $12 75@13; Egg Hard, $10½@10¾; Cumberland, bulk $10½@10¾. Spot prices are as follows: Australian, $7 25; Liverpool Steam, $7 25; West Hartley, $8 25; Scotch Splint, $8; Cardiff, $7 25; Lehigh Lump, $13; Cumberland, bulk, $11 50; Egg Hard, $10.50.

COFFEE—

Imports, Exports, 7186 lbs.

Owing to a sharp and sudden rise in the New York market where fair Rio coffee has advanced to 12c, local prices are higher, demand of all kinds of C. American good.

We quote Prime Guatemala, 12@12½c; Costa Rica 12½@13c; Good Salvador, 11½@11¾c; O G Java, 19½@20c. No Manila in the market.

CORDAGE—

Imports, 60 coils. Exports, 2 coils.

We now quote as follows: Manila, 1¼-inch (7-16 dia) and upward, 17c; do, 12-thread (⅜ dia) 17½c; do, 6 and 9-thread (¼ and 5-16 dia), 18c; Manila Bale Rope, 2 and 4 thread, 17c; Manila Cordage, tarred, 2 in (⅝ dia) and upward, 17c; do Lathyarn, 17c. Discount on lots of 10,000 lbs, 1c ₩ lb. Sisal Rope, 1¼-in (7-16 dia) and upward, 13c; do, 12-thread (⅜ dia), 13½c; do 6 and 9-thread (¼ and 5-16 dia), 14c. Sisal Bale Rope, 3 and 4-thread, 13c

CORKS—

Imports, 3 bls 12 bags. Exports,

DRIED FRUITS—

Imports, 4 sks 2300 lbs dried fruits, 50 cs citron. Exports, 5966 lbs dried fruits, 16 cs raisins.

DRUGS AND CHEMICALS—

Imports, 264 cs drugs, 2 bls alum, 30 bbls 2959 lbs ginseng. Exports, 39 cs drugs 26 carboys acid.

The market of late has developed a stronger tone and trade has been fairly active. Enquiry for near at hand lots still continues.

We quote Nitric Acid, 12c; Strong Sulphuric Acid 3@3½c; Sulphuric Acid, 2½c; Muriatic Acid 3½c (all lots of 20 carboys or more); Caustic Soda, 60 deg, 5c; 70 deg, 4¾@5c; 76 deg, 6¼@6½c; Powdered Caustic Soda, 7@9c; Caustic Potash, 9½@10½c; Chlorate of Potash, 16@19c; Soda Ash, 2@3¼c; Soda Crystals, 1⅜c

We quote at ship's side: Soda Ash, 1 90@2¼c for 52 deg. Ash, Soda Crystals, 1¼c; Chloride Lime, 2½@2¾c; Copperas, 1½c on spot; Caustic Soda, 60 per cent, 5c

DRY GOODS—

Imports, 140 cs 110 bls. Exports, 65 cs.

FISH—

Imports, 3000 lbs 21 cs fish, 250 M codfish, 5414 cs 14 kits 440 bbls salmon. Exports, 287 cs fish, 535 cs salmon.

We quote: Columbia River Salmon, 1 lb tin, $1 20 @1 35 for export, according to brand. Sacramento river, $1 10@1 20 for export; barrels $14 00; hf barrels, 7 50. California Cod, in 50-lb bundles, 6 selected in cases, 7 boneless 8c.

G & B POWDER—

Exports, 2 cs gun powder, 1000 kegs blasting powder.

California Blasting is quotable at $3 25 ₩ keg; Dupont Blasting, iron kegs, $3; Hazard do do, $3 25; Hazard K B P, in canisters, 50c ₩ lb. do do Electra, $1; do American Sport, 75c. Dupont's Sporting—Golden Pheasant, kegs F, FF and FFF, $5 50; ½-kgs, $3 00; ¼ kegs, $1 75; Superior Rifle, kegs, Fg, FFg, FFFg, $7 00; ½-kegs, $3 75; ¼-kegs, $2 25. Winchester Metallic Cartridges, rim fire, according to brand, from $2 50 to $16 00 ₩ 1000; central fire, according to brand, from $8 50 to $35 ₩ 1000; U S Cartridges $100 ₩ 1 000.

HARDWARE—

Imports, 3 car-loads, 602 pkgs. Exports, 40 kgs.

IRON—

Imports, 1018 bdls 50 tons 59 brs 68 plts 7 cs 3 bls iron, 187 bdls 6 pcs iron pipe, 65 bdls 1 cs 59 brs steel. Exports, 90 cs 87 pkgs iron, 12 bars steel.

No change to note. Consumers still fully supplied, and a few stray lots are on the market seeking buyers at considerable less than cost of importation. Prudent buyers are laying in full stocks at present asking prices, as the cable quotations this week on Scotch for early loading are $1 00 to $1 50 per ton above spot prices. Hence none is being loaded, and in a few months hence there will necessarily be a change in quotations.

Importers prices of Pig Iron, Foreign and American, to arrive: Shotts No. 1, $27¼@—; Glengarnock, $26 50@—; Eglinton, $25 00; Clay Lane White, $23 50; American, Eastern, Soft, $28 00; Spot prices are as follows: Glengarnock, $26; Eglinton, $25; Clay Lane, white, $25@; Shotts No 1, $28 50; American, Soft Eastern; $30. Clipper Gap Nos. 1 to 4 $32 50@$35 00.

We quote: California Castor Oil, No 1, $1 20 ₩ gal.; No. 2, $1 10. The Pacific Oil Work's list for Linseed, 65c ₩ gal for raw; 62½c for boiled in 100 bbl lots. We quote: Eastern linseed oil, 61½c; winter strained lard oil, 95c, in bbls; Cocoanut Oil, in bbls, 57½; China Nut Oil, 80c ₩ gal; Coast Whale, 37½c; Arctic Whale, 42½@45; Cal Neatsfoot, 85c; Eastern do, 90; Naphtha, 16@18; Red Oil, 5¾; California Olive Oil, $1 ₩ gal or $12 ₩ doz.

PAINTS—

Imports, 63 bbls 56 cs paints, 32 sks 1 cs glue, 11 hbls 21 cs varnish, 28 kgs white lead. Exports, 3 cs paints, 56 kgs white lead.

We quote White Lead 6¼ in ton lots; Litharge, 7½; Ochre Yellow dry, 3 to 3½c; Ochre, ground, 7 to 8 cts.; Venetia Red, 3½ to 5c; do, in oil, 7 to 8c; Chrome dry, 18 to 30c., do, in oil, 25c; Red Lead 7½ cents.

PETROLEUM—

Imports, 600 cs 2 tanks coal oil. Exports, 350 cs coal oil.

We quote, California, S. W., 110 deg, cased with banker faucet, 18c per gal; plain caps, 17c; bulk, in pat. bbls 14c. per gal.

PROVISIONS—

Imports, 5 cs 26,000 lbs bacon, 2 cs 1 bbl 201,000 lbs hams, 1 cs, 20,200 lbs lard, 50 bbls pork. Exports 5385 lbs bacon, 117 bbls beef, 4252 lbs hams, 13,871 lbs lard, 5 pkgs, 40 bbls pork.

We quote: California hams, 14¼; Eastern, 15½@19c; Our Choice hams, 18c. California bacon, 12@14c; California covered bacon, 14½c; extra clear sides, 13¾; California shoulders—mess pork, $20 per bbl prime mess $13¼, clear pork, $21 per bbl; extra clear do, $22 per bbl, pig pork, $24 per bbl, mess beef, $14 50 per bbl; extra mess beef, $15 50 per bbl, family beef $16½ per bbl; Eastern refined lard, in tcs, 13½c per lb; California refined lard, in tcs, 11½c per lb; 10s, 10½c; 5s, 11c; Banner lard, 10s, 12½c; 5s, 12¾c; 3s, 13c; Fairbanks lard—10s, 13c; 5s, 13⅛c; 3s, 13¼c.

QUICKSILVER—

Quicksilver continues very dull, we quote 34⅝c@34¾. At present there is but a small demand for Hongkong, as considerable quantities are being shipped from London to that market.

RICE—

Exports, 2000 lbs rice.

Asiatic Rice is only in moderate demand with Mixed lower.

We quote mixed 4 25@4 30. No 2 China 4 75 @4 35; good No 1 5 75@5 75c; Extra No 1 very scarce at $6 40. Hawaiian $4 87½c.

SALT—

Imports, —. Exports, 9849 lbs.

Liverpool fine we quote at 16 at 20 ₩ ton. California, $6@10 for Bay; do crystal, $10@15 Carmen Island, fine, $16@22; do coarse, $12; do do half ground, $9@14.

SOAP—

Imports, 496 bxs. Exports, 226 bxs.

We quote: California Castile, Mottled, 8¾@12 White, 16; French Castile, Mottled, 11@12½ White, 17@20. California Pale and Chemical Olive, ½@6c; Washing Powders, $12@15 per gross.

SPICES—

Imports, 2 pkgs spices.

We quote: Black Pepper, 15@16c; White Pepper 22@—c; Allspice, 12@15c; Cloves, 22@27c; Cassia, 9@10c; Ceylon Cinnamon, 45c@50c; Ginger, 8@15c; Nutmegs, 65@—c; Mace, 60c; Borneo Ginger, 16@18c.

SPIRITS—

Imports, 56 bbls spirits, 1 cs 247 bbls whiskey, 805 cs liquors. Exports, 60 cs brandy, 93 gals 5 cs whiskey.

SUGAR—

Imports, 65,712 pckgs, 5853 bgs 915 kgs raw. Exports, 18,000 lbs refined.

Raws—The principle business of the week has been in Hutchinson keg which was freely taken at 9c. Very little bag sugar was sold. The sales of the week comprise 915 kegs Hutchinson at 9c and 125 bags various grades at 5½@7¾.

Refined—The local demand has been rather light during the week. This, however, is to be expected as the canners have finished for the year, and the wholesale grocers are well supplied. The New York market is about steady under a moderate demand with granulated and Standard A lower.

We quote New York prices yesterday, A crushed 9⅛, granulated 8 11-16 and Standard A 8 3-16, Yellow C, 6¼@7¼.

We quote local refinery rates, prices subject to change without notice.

(A) Pat Cube Sugar, in bbls, 11⅛c; (A) Crushed Sugar, 11⅛c; Extra Powdered sugar, in barrels, 9c. Fine Crushed sugar, in barrels, 11¼; Dry Granulated sugar, in barrels, 11¼c; Extra Granulated sugar in barrels, 11; Extra C 10½; Golden C sugar, in barrels 10; D sugar in barrels, 9½; Extra Fine Powdered, in bbls, 12½c; Confectioners' (A), 11; El Dorado C, in barrels, 10¼c; Mariposa C, 9¾c; Nonpareil, 9½c; half barrels, ¼c, and boxes, ½c, more for all kinds.

STARCH—

Imports, 1079 bxs.

TEA—

Imports, —. Exports, 1087 lbs.

TIN, ETC.—

Owing to advance in rate of freights outward from England consequent on the low rates of charter from here the price for shipment has advanced. Stock on hand is large and will have to be carried over until next year, as this season's canning requirements are filled.

	Spot.	To arrive
I. C. Coke Tin Plates, from first bands:		
A. B. Grades	$6 15	6 25
Yspitty "		
Good B. V " } Ordinary " } Common " }	$5 75@6 10	$6 00

We quote: PigTin, on spot, 22½c.

WINES—

Imports, 2 cs Foreign. Exports, 15 cs Foreign, 400 gals Native.

See market report in the Wine Department.

He slipped quietly in at the door, but catching sight of an inquiring face over the stair rail, said: "Sorry so late dear; couldn't get a car sooner." "So the cars were full, too," said the lady, and further remarks were unnecessary.

RETAILERS' CORNER.

Trade during the week has been fairly active and collections are coming in very well. There are no special changes in quotations, with the exception of an advance in Coffee and Coal Oil.

SUGAR.

The demand has been rather light during the week, as the canners are no longer in the market and the grocers are well supplied at present. The moderate demand in New York has had the effect of making the grocers of this city purchase slowly, but as prices keep firm there, we see no immediate fear of a decline. The Standard Sugar Company commenced on the present crop of beets about ten days ago, and now have Beet Sugar on the market, which they offer at the same price as Cane Sugar.

COFFEE.

The local Coffee market is advancing in consequence of the firm tone of the New York market. The market for Rio on the Atlantic side is very active, and prices have advanced to 12c for fair. Receipts at Rio continue light and purchasers are decreasing the stock. The amount of Central American Coffees held in city and expected to arrive this season is only sufficient to fill our actual wants, so that there is no danger of this market going below the parity of the New York market.

RICE.

The local demand for all kinds of Rice has been light. Mixed is a little lower, and Extra No. 1 is very scarce at an advance. The crop of Carolina Rice promises to be large this year, the inside figures being placed at 225,000 bbls. and the outside figure 300,000 bbls. The opening price of Carolina this year in Chicago was much lower than last year.

CANNED GOODS.

The canning season is now pretty well over, the only article that any of our packers are working on being Tomatoes and they will be finished inside of two weeks The Tomato crop was short this year and stocks are well held. Business in Canned Goods continues very good, both England and the Eastern States taking freely of our fruits. The *Northwestern Grocer*, of Chicago, says that there is a very good distributive demand prevailing for our fruits and that some cheap Apricots, Pears and Grapes have been offered, which were readily taken at asking prices.

SALMON.

The market for both Columbia and Sacramento River Salmon continues active, the Eastern States buying largely on account of the shortage of the shortage of the Mackerel crop.

DRIED FRUITS.

Prices still continue high, but from the splendid quality of the fruit dried this year has commanded ready sale. Receipts still continue light.

MISCELLANEOUS.

Provisions are in active demand, but at lower rates. Coal oil generally is higher other ohanges are merely nominal.

Trade Failures.

The feature of the week in commercial circles has been the large failures in the clothing and clothing trades in the order named. Brouner & Co., Seidenbach, Schwab & Co, F. Mayer & Co, and Levy Brothers & Co. These failures hinged one upon another on account of the close relations of the firms and their exchange of paper They were virtually the result of trying to carry on such an enormous and extended business in that way and the locking up of surplus capital in real estate which, although valuable, could not be made immediately available to meet the emergency. Outside of these failures there were none elsewhere of any great importance. There were 164 failures in the United States reported to *Bradstreet's* during the week ending Sept 29th, 17 less than the preceding week, 9 less than the corresponding week 1882 and 52 more than the same week of 1881. Compared with the previous week the middle states had 83, a decrease of 7; New England stated 24, an increase of 13, southern states 23, an increase of 2, west an states 50, a decrease of 2; Pacific states and territories 38, an increase of 7; Canada and British Provinces 11, an increase of 5. In the principal trades they were as follows, Grocers 31, general traders 21, liquors 21, clothing 9, manufacturers 8, shoes 7, hardware 6, tobacco and sugars 5, lumber 5, furniture 4, hotels and restaurants 4, bakers and confectioners 4, grain and flour 4, dry goods 4, jewelry 4, drugs 3, stationers 3, carriages 3, hats 2, fancy goods 2.

Spirit of the New York Markets.

NEW YORK, Oct 3d.—The features of the general market remain much the same as last week, and indeed for many weeks The failures in the Woolen trade in the fore part of last week created a feeling of temporary apprehension that they might be indicative of unsoundness in the dry goods trade. It was soon learned, however, that these suspensions were the result of outside speculation by members of the woolen firms, and a more healthy tone promptly supervened. Business over the country seems to be moving with a fair degree of activity, the railroads reporting a large increase of freight. In the local market, however, the dealings continue to be overturned by much the same spirit of conservatism that has characterized business transactions all through the year. There is very little change in merchan lise prices, and there is very few exceptions to the rule than they have been since the fore part of 1879. The great Grain markets in Europe are over-stocked, and the demand is very small, which interferes with the full movement of cereals for a time on this side of the Atlantic. The bank clearings continue to show a decrease, compared with last year, which is in part due to the shrinkages in prices. Thus the clearings in the New York banks this week were 21 per cent less than for the corresponding week last year, and for the month of September 24 6 per cent, less than for September, 1882. For the nine months of the year the gross New York clearances were $27,482,-158,064, against $33,905,665,301 same period last year. The clearings of most of the interior cities also show more or less falling off. The Bank of England has reduced the rate of discount to 2½ per cent, which, as the rates for money are advancing and Exchange is declining on this side, is favorable to gold shipments in this direction. The Wheat market has been subject to very little change, and the export trade is slow. Corn and Oats have declined, as have also Winter Wheat brands of Flour Lard is also lower Choice Butter and Cheese are in light supply, and prices favor sellers Spot Cotton is unchanged, but futures are higher. Wools is still but steady Tobacco is very firm, but is quiet. Hops are dull. Drugs and Dyes are generally about steady, except Shellac, which is in active demand, with prices advancing Hides, Leather and Naval Stores are dull, with prices barely steady Cuba Sugar is active and firm at higher prices. Refined is in moderate request, and hardly steady. Molasses in good jobbing demand Tea is in fair demand at firm prices Coffee is strongly held but quiet Rice is in moderate request Spices are steady. Pig Iron is dull and Lower Tin is easier Lead is dull, Copper is steady Both freights by the Europ an steam lines are quite active and firm, while the Canadian business is very slow, but rates are kept firm by the continued light supply of sailing vessels.—*Shipping List.*

Oregon Trade.

PORTLAND, Oct. 5th.—Light showers this morning, followed by a heavy downpour of rain this afternoon, and later by clearing weather, has rendered the lay of the land more favorable, and the fears manifested for the week has not been complained of, but on the contrary it is difficult to obtain stocks to meet demands Several coasting steamers have arrived from California and two are now en route.

On land freights show a steady increase. Yesterday's blockade at the crossing of Snake river has delayed the passage of forty cars of merchandise The canned corn train is included in the delay A very large quantity of grass seed has been received this week.

Receipts for past seven days have been 49,682 ctls wheat, 5753 bbls flour, 1597 ctls oats, 1096 ctls bran, 1411 ctls millstuff, 151 sks potatoes, 50,787 lbs wool, 8011 lbs hides, 2580 bxs eggs, 1197 bxs butter, 8252 lbs hops, from the valley section, and 96,360 ctls wheat, 5132 bbls flour, 687 ctls bran, 296 ctls millstuff, 61 sks potatoes, 54,418 lbs wool, 14,824 lbs hides, 80 bxs fruit, 10,981 lbs hops, from the eastern section.

No new spot charters are reported, and the situation shows no change, owners generally holding higher. The last business here was on the basis of 55s 9d per ton to United Kingdom, and at San Francisco, 45s Arrivals for a week past, all coming under prior charter and with rates as above, is about what is at present obtainable. These arrivals and the wreck of the Carnsmore, which was also under charter, have reduced our tonnage en route to that extent Five vessels have completed cargoes and seven others are well along The movement for September was fully up to expectations, but was slightly restricted by a depressed foreign grain trade.

The wooden ship Heela, 1529 tons, now at Tacoma, has been chartered to load wheat at Tacoma for the United Kingdom Rate private. She will be loaded by a Portland firm

TONNAGE STATEMENT

In port, loaded, iron	4,872
In port, loaded, wood	1,135
In port, waiting	6,578
In port, loading, wood	3,532
In port, engaged, iron	5,037
In port, engaged, wood	1,507
In port, disengaged, wood	12,385
On way to this port	50,505

The foreign trade in Wheat has shown extreme dullness together with its weakness, but at the close is steadier. Imports into Great Britain have recently been up to large, and when [illegible] upon the heavy stocks of fruit not but have a depressing effect upon the market, especially when the demand failed to keep pace with increasing arrivals. This is the present condition abroad, and until the harvest on Europe can be seen and the probable available supply and general requirements made apparent, no material change can be looked for. Meanwhile operations on this coast are compelled to fill their ships with wheat at an apparent loss, and only a brief market is had for flour All this goes to show that there has been confidence in the future and that the same confidence rules to-day although in a lessened degree. Some few holds have been taken as high as 60d two months ago, and there is a general belief that something better than to-day is coming. Farmers have on hand good prices for their grain and sales have been more large than the situation warrants, because of a free business in chartering ships to arrive. This has given the farmer an advantage which he has seen and consequently he is holding for 90c per ctl. Prices for wheat are 85c eastern and valley, respectively, for round lots of shipping grades. In the interior, millers are paying a shade advance for milling grades Receipts from the Upper Columbia and from eastern Oregon and Washington seem to be restricted by transportation facilities.

A fair local trade is doing in Flour and some is being sent to China. We quote standard brands $6, less usual trade discount

While receipts of Millstuffs show a marked increase, yet the demand is also large, and both are steady in their offerings and some cutting in that direction is soon expected. The demand is good

Receipts of choice oats same as more than supply not to meet demand and sales are from 85c to 87½c for good to choice feed. Milling would bring a slight advance

Eastern lard has been received at 9c. Meats are firm at full prices, with choice sales active

Supplies of California fruit are dwindling, reminding us that the season is far advanced. Oregon stocks are almost entirely confined to apples, which sell at $1 to $2 25

New Oregon dried plums and apples are at hand, the former held at 15@16c California supplies is fair, with apples and peaches

A fair trade doing at 15c for California cheese and 15@15c for eastern. Some fancy eastern direct is held higher

The Petaloe market is rather weak at 1c, although offerings have lessened The vessels soon to sail for China will call for some California are held higher) sweets, 3c—*Oregonian*

TOBACCO MARKETS.

SAN FRANCISCO.—There is good demand for old Havana Fillers, say 1881 and 1882 In seed there is an inquiry for 1 A and B's of 1881

There have been more arrivals of 1880, but the demand seems to have fallen off, the quality in later shipments does not give equal satisfaction with that of the earlier ones Many manufactories are looking anxiously for 1882 being ready for packing, say August, and will get along as best they can on '80 and '81 with the aid of Sumatra, until after Christmas Trade generally with local cigar manufacturers is quiet.

In manufactured tobacco there is a fair trade with out any unusual features Eastern run ners have generally deserted this market and got a lesson that will probably tend to keep them out of Oregon

OVERLAND RECEIPTS OF CIGARS AND TOBACCO

[U. S Tobacco Journal.]

NEW YORK, Sept 29.—What our market stands in need of is more frost A real, good, substantial frost that would turn the green tobacco into adamantine sticks, is what the holders of tobacco in the market pray for. The coincident frosts of the last days of the month, which were severe enough to kill a few hundred acres of tobacco, were made to appear as having blighted nearly all the crops, leaving hardly enough material for the escapades of smoky and subsequent hail storms This caused a rush for seed leaf, last week especially Three weeks ago the newspapers in most of the tobacco growing sections simultaneously broke out into wails over the destruction of the crops by hail and frost. As a silver lining to this cloud they spoke of coming high prices for all the old tobacco then on hand. This frost alarm did really chase a lot of people into buying up old tobaccos indiscriminately. And now, all of a sudden, these very same papers glory in the "magnificent results" of the new crop, speaking of the late frosts as having only slightly injured but some 15 to inferior lots, fikely out of the crop, for the most part having still to ripen on the fields perfected This is not a f With the exception of a few of these papers, they all now southe and trumpet the small yield per acre of the new crop. Notwithstanding. Notwithstanding considerable of rumors and packers are guided by such statements, a fact which in itself only is not complimentary to the intelligence of the trade.

The business done in the market on or about Tuesday last. Till then some heavy sales of '82 New York State Big Flats were made. After that the character of the transactions changed. The sales of this type amounted to about two big tons of '82 Pennsylvania, consisting of purchases made some time ago. Although the whole offer comprises but a few hundred cases, the different qualities offered are pretty much of a piece. In point of excitement and of flying reports relating to prices for a coming crop it seems to run neck and neck with '81. The '82 is undoubtedly a big piece of extent and up to the present time a splendid crop, but it has a mass of faults, as told by speculators, who do not possess the information that I have. In the hosiery necessary for packing tobacco for a particular trade. If, therefore, purchases in the market will sooner trust to the blustering stuff in mid-of moonshine dealers strutting b ut as big as a drove of bulls at market, and by unscrupulous jobbers, they deserve to be bitten, and if they reject any goods afterward it is by no means a sign of the coolness or dullness of the tobacco they bought. Whatever, at this time of the year such a speculation dealer has large lots of old tobacco on hand he rushes into the country, purchases several acres here a d there, harvests extremely high prices for the growers, pays his compliments to the big bulled '82 and the local papers, indices him to mention these purchases which he claims he made pooled out of scarcity of tobacco and of which he will, indeed, have packed in order to make a profit, has to buy tobacco reasonably in the country. The speculan packer has blocked his business, the grower, made wild, will not sell reasonably He will have to learn to wait, and wait he does till the end of the season, when he accepts an offer and most always a low price offer

We repeat that the crop is a big one. There is no earthly reason why any other than exceptionally fine tobaccos should bring high prices. There is no scarcity of seed leaf and none there will be as matters stand at present.

[Western Tobacco Journal.]

CINCINNATI, Oct 1 Saturday's offerings were moderate in quantity and contained a large number of really good and Fancy Leaf On Smokers and low grades of Fillers and Binders the offerings were not very firm, and were not generally underbaby prices of the previous saturday, especially on Smokers Notwithstanding this fact to persons were very small, especially when the fancy grades considered, crop reports are so unfavorable For Medium to Good and Fancy Wrappers as well as strictly good Fillers and Binders full figures were obtained.

[New York Tobacco Leaf.]

AMSTERDAM, Sept. 18th—Messrs Schrap & Van Veen report as follows: Of 18,350 bales Sumatra to-day offered this week by subscription, 16,841 bales were sold. The competition was keen and not only good qualities fetched high prices, but also medium tobaccos were well paid for The great want of all other kinds suitable for wrappers makes it certain that Sumatra will keep its position on our market, while it may be expected that the next subscription, when the remaining crop will be brought on the market, will not bring lower prices. The subscription of to-day will take place the end of this month.

Imported—8,235 bales Sumatra

Stock to-day 11,000 bales Sumatra, 17,144 bales Java, 295 bales Grecian, 1,981 bales Turkish, 255 hhds Maryland, and 61 hhds Mason County.

Customs Duties.

" 9, Tuesday	21,813 24
" 10 Wednesday	11,125 97
" 11, Thursday	9,663 30
Total	$116,665 02

England Jealous of United States Influence in Mexico.

U S. Consul-General Merritt, at London, in a letter to the State Department, says the proposed commercial treaty between the United States and Mexico has attracted great attention in England, both in business and Government circles, and Parliament is being constantly memorialized by commercial bodies to again open diplomatic relations with Mexico, so that English trade with that country may not be supplanted by the United States. The possibility of Mexico growing large quantities of coffee for the United States was recently referred to by a member of Parliament as one of the probable results of the treaty, which would not unfavorably to English trade interests. This reads as if the members of Parliament did not know that coffee was on the free list, and that there were the same inducements now for Mexico to go into coffee planting as there would be were the proposed treaty in force.

FRIDAY OCTOBER 12, 1883

SEARLES STILL SCOLDING ABOUT THE TREATY.

It is quite evident that Mr. Searles, of the Hawaiian Sugar Commission, was both disappointed and displeased that he could find nothing on which he could induce his fellow commissioners to frame a report adverse to the continuance of the the Hawaiian Treaty. When the sugar refiners of New York won from the Secretary of the Treasury the appointment of Mr Searles as one of the three Commissioners, they flattered themselves with the hope that their cause was gained. They had a friend, a co-conspirator on the Board. Their primary object was not the abrogation of the treaty as a matter of public policy; about that they cared nothing. What they were aiming at was, through the abrogation of the treaty, to win back this market for their refined sugars. It has been recognized on both sides of the United States that this was a fight between two sugar refining interests for the possession of this market, and the treaty or its abrogation were merely weapons. For this reason it was hardly just to the planters on the Islands to place on one of the parties at interest, and that a member of the firm who had brought the charges against the treaty, on the bench as one of the triumvirate who were to try the cause. The evidence, however, was so conclusive that this biased judge, this interested witness, has been compelled to acknowledge publically that the charges he himself had helped to make and which he was authorized to investigate, were unfounded. To soften the regrets of his associates in accusation, and, if possible, to modify the effects of his own report, this New York refiner is seeking to bring up new matter against the treaty, but his new accusations are as false in statement and erroneous in their inferences as those which the commission was appointed to investigate. He professes to have other means of knowing what the framers of the treaty and Congress in ratifying it, meant, than can be inferred from the text of the treaty itself. If he goes outside of that text he will learn that Secretary of State Hamilton Fish, said his object was to make it so favorable to Hawaiian planters and people that every other power on this continent would come to Washington begging similar treaties, which the United States would grant, though probably not quite so liberal in terms, and thus divert $700,000,000 of trade from European merchants and manufacturers to American merchants and manufacturers. He computes the nominal exports of the Islands, not the net receipts of the planters after paying American ship owners and companies, freights and insurance, and the San Francisco agents' commissions. On the other side, he fails to add the freight, insurances and commissions on exports from the United States to the Hawaiian Islands, and so forces figures into the position of liars. He takes no account of any of the indirect benefits this country derives from the treaty. He states that Chinese are getting all the benefit of the remission of the duty on rice, when it is well-known that native Hawaiians who own all these lands, and which were formerly used for growing taro, are making as large, if not a larger share of the profit of the rice crop than the actual growers, and moreover that as in sugar, American shipowners and American insurance companies and San Francisco commission merchants get a large slice out of rice profit. His arguments about the Chinese are ingenious but have nothing to do with the matter, and certainly both the Chinese, the Portuguese and the Swedes are of more benefit to the United States merchants and manufacturers while they are on the Islands than if they were in Hongkong, the Azores or Sweden. His dingsat the smallness of Kalakaua's kingdom and at the antecedents of Minister Gibson show his desire to throw stones when he cannot fire heavy guns. It is very clear now who was responsible for the blunder in the report about there being so few American planters. It speaks badly either for his ability or his honesty that when sent at the expense of the United States people nearly 6,000 miles to investigate a particular fact, he comes back and reports that he could find few Americans; most of the planters being subjects of European powers, when the well-known fact and one that can not be denied, concealed or evaded is that, of the sixty-five principal plantations, 47 are owned by Americans, 11 by Englsh, 5 by Germans, one by Scotch and one by Chinese. The object of all this outcry is to get a market for Havemeyers' sugar in California. That object will never be attained and for these reasons, treaty or no treaty, we shall not need this sugar, because our own refiners give us a better sugar than theirs at a price with which the Havemeyer sugar cannot compete, and that's what has caused the animus against the treaty.

CHINA REFINERY SUGAR.

Within the last three months two or three lots of soft sugar from a refinery in Hong Kong have been placed on this market at prices slightly below what our jobbers can sell California, American or Standard sugars at, of corresponding grade. These China sugars are apparently a little cheaper than ours, but being in bags and not in barrels, are only apparently so. Moreover, we know by experience that both our cane sugar refineries and our beet sugar refinery turn out pure sugars and use no cheap ingredients to add to the weight. The Chinese are known to be adept in the arts of adulteration. In these diabolical practices they even excel the French. To counteract their villainies, which, if unrestrained, would saturate tea drinkers with slowly-acting poisons, Congress has made a special law, and appointed for each of the principal cities of import a tea inspector. For refined sugars, however, there is no inspector, and yet they are one of the easiest commodities in the world to adulterate. Any white clay, if the unscrupulous refiner does not wish to go to the expense of glucose, will answer his purpose, and five per cent admixture would hardly precipitate a deposit at the bottom of a cup of tea, which would necessarily attract the attention of the drinker. This China refined sugar may be an excellent article, and it certainly affords dealers a chance of making a quarter of a cent a pound over the profit on California refined sugars, but consumers, who take it into their own stomachs and feed it to young children, would do well to examine it closely. For ourselves, we would not risk it if it were sold at half price, and a good many intelligent people are of our way of thinking. How much more then should we prefer sugar known to be pure at 12 cts. per pound to a possible mixture of sugar and clay at 11½ cents.

EUROPEAN DEMAND AND THE WORLD'S WHEAT SURPLUS.

A member of the New York Produce Exchange has written a very interesting and exhaustive statement of the outlook of the grain trade for the season 1883 4, which we give *in extenso* on another page. The conclusions he arrives at are that the world's supply is less than the demand, and that prices must rise sufficiently before the next harvest to check consumption, and bring supply and demand closer to par. Granting his premises to be correct, and that Europe's wants from this country are as great as in 1879-80, and the United States' possible surplus for export considerably less, our farmers are making no mistake in upholding wheat. This is not a matter on which a journal can give advice. We can only publish statements that seem authoritative, and give our readers an opportunity of judging for themselves of their reliability and drawing their own conclusions.

THE STATE PRISON.

From personal observation of the State Prison at San Quentin and the management of Warden Ames and the late directors, and comparison with the management under former wardens during the last sixteen years, we formed the opinion that for the first time in our knowledge San Quentin penitentiary, under Warden Ames, was not a disgrace but a credit to the State. We read from day to day such testimony as was published in the two investigations, and came to the conclusion that though some mistakes might have been made, the Board had done its duty and was deserving of commendation, rather than rebuke. The exigency of politics, and not justice to taxpayers or regard for discipline in the jail, forced the Governor to oust the old directors, and with them goes Warden Ames, the only man in authority in our experience, which is since 1866, who had a single qualification for this most important office. We understand that he is to be succeeded by Paul Shirley, of Martinez. Mr. Shirley has served as Senator for Contra Costa and Marin, and was at one time a candidate for the office of Secretary of State. A good man in his way, but if he has any special aptitude for governing a jail containing 1,200 or more convicts and doing the best that can be done for the State, for the reformation of the less guilty prisoners and the control of the confirmed criminals, if he has ever given an hour's study to the science of penalogy, if he is competent to manage a number of very diversified manufactures so as to make them profitable, including a large jute factory, we never heard of it, and we do not hear of anybody else who has. His chief recommendation is that he is a Democrat, and it is supposed that his appointment will gratify every other Democrat who is not a rival candidate for the office. This is a miserable condition of affairs, when an important office, one of the most important in the State, one which affects the present and future life of 1,200 men, to whom he is to be the law, the judge and the executioner, is given over to a man for the reason that he has been voting and supporting a certain party ticket, for his own benefit, for twenty or thirty years. In other countries, men are selected for such positions for their supposed special fitness; with us it is made a reward for party services, and fitness plays no part in the choice. Some good Democrats do not believe that such an office as governor of the great jail of the State and with it all the subordinate offices of the penitentiary, should be thrown open for hungry office seekers, even of their own party, to scramble for. The stipends to be earned by tending paupers, prisoners, patients and lunatics should not be made prizes for loud-mouthed politicians, who have no other recommendations than they have voted right or wrong, through thick or thin, for any ticket their leaders have put up, to contend for. Decency and humanity should forbid this; there should be enough other prizes where the lives, liberties, health, happiness and welfare of unfortunate or misguided human beings are not concerned, to satisfy our party when intrusted by the people with power. But the answer of both parties is that most of the leaders and a majority of the rank and file are bread and butter politicians, and sometimes we think with shame that the Democrats are the worst. In our view of this State Prison affair we are glad to find that so good a Democrat as John Boggs, of Colusa, is very much of our way of thinking. In an interview on Tuesday, between a *Chronicle* reporter and Mr. Boggs, the gentleman said: "I am in favor of continuing the present system of management. I am convinced that the prison was never conducted so well before, and I do not believe that we can improve upon it by making changes, at least, not at present. I frankly admit that all I have seen of the prison convinces me that the former directors were capable and anxious to make a good record."

"Then, why did the Governor remove them?"

"I am not quarreling with the Governor," replied Mr. Boggs. "I merely want to indorse the now prevailing system of management. I am in favor of continuing it. We shall run the jute mill as usual, of course, and keep the prisoners at work. Work, in my opinion, is a great reformatory agent."

"The new Board organizes to-morrow, I believe?"

"Yes."

"Will you elect a new Warden?"

"Not unless Mr. Ames resigns. He has expressed a determination to do so. If he does we shall elect, and our choice will probably fall upon Paul Shirley."

"How about the minor offices?"

"Oh, there are hundreds of applicants. I am in favor of letting the Warden make his appointments."

We acknowledge an invitation from the *Examiner* Publishing Company to inspect their new Scott press, built to their order by C. Potter, Jr., & Co., of New York. This is the only press of the Scott pattern on the coast, and we understand that in speed and in excellence of impression equals any other press for newspaper work made in America, and in economy excells them all.

It is an amusing coincidence and nothing more that the middle name of Miss Sarah Althea Hill is the generic term for the Rose of Sharon.

Brown. "Hello," Robinson, how are you, old fellow?"

R. "920 fine; how's yours if?"

That Boucicault's dressing room is a "Star chamber."

That the collection of back taxes is chiefly for the benefit of the lawyers who have the contract.

That California never kept much money at home until producing and manufacturing took the lead of mining.

That there is another condemned stranger to divide with Wheeler the attentions of foolish women.

That the man who understands the chemistry of the stomach never puts oysters on the top of a bellyful of whisky.

That yesterday was the great Jewish fast, the Day of Atonement, and all Hebrew establishments were closed from sundown Wednesday until sundown on Thursday.

That every merchant should weigh, count, measure or gauge everything he receives and compare the result with the invoice rendered him

That the growth of trade within the State, that is an increase in the number of consumers, who in turn are themselves producers, is becoming more and more important to all classes.

That every man or woman in the State can help to build up the State, and thereby share in its prosperity, by always selecting the home manufactured article in preference to any other.

That home manufactures are increasing, but the number of employees could be doubled or trebled if our people would always give these manufactures the preference over anything made in other States or in foreign countries.

That California is out of luck. Other states can have fevers, floods, tornadoes, and electric storms that slaughter hundreds, and we have only an earthquake once in a decade and nobody hurt, and not even a wine glass broken.

That the State of California and the City and County of San Francisco are the legalized usurers of the State. They demand two per cent per month interest on delinquent taxes. From the poor which hath not shall be taken that which he has.

That home manufactures means employment for those who live in towns and more customers for those in the country who raise anything that can be eaten or drank, or is used in house building, in manufacturing or enters into local commerce.

That there is great rejoicing over the conviction of LeRoy, the murderer of Skerrett, but why rejoice: Wheeler, the strangler, was convicted of murder in the first degree nearly three years ago, and still lives, and the crime of one was as atrocious as another.

That the [illegible] account of the financial condition of the Western Union Telegraph Company [illegible] by the President to the stockholders at the annual meeting, on March [illegible] the company's treatment of its [illegible] on a worse light than ever.

That President Wood, [illegible] has concluded to [illegible] the city papers a little [illegible] and [illegible] months hereafter [illegible] the [illegible] of the business and [illegible] people who have become [illegible] to [illegible] towards [illegible] of specials, which [illegible] community.

That [illegible] South should have some manufactories, [illegible] should select some line [illegible] locality has some special [illegible] and which the selection is made the [illegible] should make a beginning, without waiting for some San Francisco capitalist to come along, and do the work for them.

That the *Bulletin* has been making its usual [illegible] about ships being dispatched to [illegible] Coal, or Queenstown for orders, and [illegible] ship masters prefer that last port. The City of Corinth is heard of [illegible] miles south of [illegible] and is connected by railroad with Queenstown and [illegible] landing place at the other end of [illegible] Cork Harbor. Queenstown was formerly called the Cove of Cork, and to prevent confusion the name was changed, but the *Bulletin* has got its ports worse mixed than ever.

That Nelson's case to have been at his old tricks. It is said, Mr. Sharon has a letter from Governor Richard[illegible] of Wisconsin, in that he does not know anything about Moss Hill, never heard Mr. Sharon acknowledge that she was his wife, never heard Mr. Sharon refer to her in any way, never visited Hill nothing to [illegible] as he remembered, and so on. Now, we want to hear from that Judge [illegible] Supreme Court. Nelson's chickens are coming home to roost, and Australia is yet to be heard from.

That Commissioner Scates, on his arrival in New York, has returned like a hog to his wont, and is making fresh charges against the Hawaiian treaty, to stand in place of those which he himself has acknowledged had no foundation. Congress has [illegible] done to this outcry and given the Hawaiians [illegible] Belmont-Searles crowd a chance to prove what they charged. They have [illegible] utterly failed that Congress will not [illegible] any time which might otherwise be employed, as to bestow it in listening to their railings.

OFF FOR HAVANA.

Mr. Simon L. Goldberg, of the house of Brandenstein & Co., tobacco dealers, leaves this city to-day for his annual visit to Havana, taking the northern route—that is, by way of New York. Mr. Goldberg is one of the best known experts of leaf tobacco in the United States. His judgment is uniformly excellent, and as he is equally well acquainted with the planters and merchants of Havana and the growers of Ohio, Connecticut and Pennsylvania, he will not only purchase largely of Cuban leaf, but of domestic tobacco, before his return to this city. Mr. Goldberg was one of the first tobacco experts to discover and announce in unmistakable terms the extraordinary superiority of the Pennsylvania tobacco crop of 1882, and every opinion given since has confirmed the view he took months ago. The business of Brandenstein & Co. has increased so rapidly within the past two years that they have been forced to add to their already spacious premises on Washington street, by taking a large store on Montgomery near Jackson. The new warehouse is 137½ feet by 30 or about the same size as the establishment on Washington street.

SHALL WE SELL WOOL OR WOOLEN YARN?

There are three hundred flock masters in this State who suffer yearly in their pockets because their product, wool, is at the mercy of speculators and Eastern manufacturers. Little of our wool, if any, is washed or can conveniently be washed on the sheep's back in this State, and between grease, and the dust and dirt from the fleeces collected on our sun-dried plains and mountain sides, they become too heavy for profitable shipment East. If a hundred of these flockmasters would each risk a thousand dollars in a yarn factory, and try fairly the experiment of shipping wool a yarn East instead of wool with its grease and dirt, we believe their difficulties would be in a fair way of being removed. None of the objections, and they are grossly exaggerated, about increasing our weaving factories apply to spinning yarn for sale East. Instead of one yarn factory, we ought to have three or four in the State, one in each of the leading wool districts. If we cannot sell our wool in the form of blankets and cloth in the East, we can sell all we do not manufacture into textile fabrics, as yarns for other manufacturers to finish. There was a day when it was considered insanity to talk of building flouring mills to depend on European custom for their support. No one thinks it insanity now. We may be considered by some to be entertaining a chimera when we recommend turning our wool into yarn before selling, but the day will soon come when it will be largely done. There are no such risks in the experiment as there were in manufacturing flour for British consumption.

WOOL.

Some Texan flock masters are considering with some hesitation about continuing the crossing of Merino on graded sheep, produced originally from Mexican stock. They claim that this shrinks the carcass, already none too large for mutton. By this crossing, they add to the weight of the fleece at the cost of the carcass, and descend from medium and a possible combing wool, to a shorter staple and abundance of crease. The graded Merino produce a dense, fine staple, but unless a high price is paid for superior rams, the staple gets shorter and shorter and the price for the product less and less. By using coarse wooled rams the value per pound of the wool in the fleece can be increased but at a corresponding loss of weight but at the same time the weight of the carcass for mutton is also increased. In which way the most profit lies, each flockmaster must decide for himself.

A grocer grossly insulted Mrs. McGoffin the other day without intending it. She was an immensely stout woman, and stepping upon the scales, playfully requested the grocer to weigh her. As he adjusted the weights, he remarked that she weighed 190 pounds, which proved to be her exact weight. "How did you come to guess it?" she asked. "I am used to guessing at weights. I weigh on hogs for five years in Cincinnati."

Wool Shrinkages.

It would seem by an article in one of our contemporaries that the shrinkage of wool is not at all understood out side of the trade. All wool is not bought on a second basis, that is, by purchasers either with the aid of the dealers estimate about the amount the wool will shrink, and if they deem that it is safe to add two per cent to the buyer's estimate, for he is bound to get by the owner not until he almost has, that their particular lot of wool is just about the right set of sacks in the market. Of course, the owner of the wool is one of the said the buyer must be very careful of this and the buyer must be very careful of this and the buyer must be very careful of this and

JOBBERS' PRICES.

OCTOBER 12, 1883

The following Prices are those at which city and country Retail Grocers can buy in lots to suit their trade and are revised weekly.

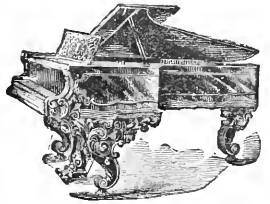
CALIFORNIA Piano Manufacturing Co.

INCORPORATED UNDER THE LAWS OF CALIFORNIA MARCH 8, 1882

Manufacturers of Strictly First Class

UPRIGHT PIANOS.

Factory, 431 and 433 Fourth St., corner of Bryant. Old Kimball Carriage Factory.



Salesroom, 30 New Montgomery St., under Palace Hotel.

Our instruments possess the very latest improvements, and in TONE, TOUCH and DURABILITY are absolutely without a superior.

EVERY PIANO IS FULLY WARRANTED FOR 5 YEARS

Our factory is the most complete on the Pacific Coast, possesses every kind of machinery, steam, dry houses, etc., in fact is as complete in all its appointments as any Eastern establishment, producing Pianos of uniform excellence and durability. An examination of our Piano-Fortes is earnestly solicited. Catalogues and full description mailed on application.

WALTER S. PIERCE, Secretary and Agent.

JUSTICE BAKING POWDER.

"Fiat JUSTITIA, Ruat Cœlum."

SAN FRANCISCO, June 30th, 1883.

We beg to call your attention to our JUSTICE BAKING POWDER, each can of which we guarantee to be full net weight and to contain nothing but the purest Cream of Tartar and the best English Bi-carbonate of Soda, compounded on the most approved formula.

We make the price as low as it is possible to sell this quality of goods, desiring that the purchasers may feel they are getting value received, ALL IN BAKING POWDER, and that they are not involuntary contributors to extravagant newspaper advertising, or to the placarding of fences, as their intelligence must advise them is too often the case when they buy some other brands. At the same time, *Justice* to the manufacturer, *Justice* to the dealer, *Justice* to the consumer, and last, though not least, *Justice* to ourselves compels us to assert in unmistakable terms that, however *Majestic*, *Far-fetched*, or *Sweetly Perfumed* the title by which any other is known, no purer, more wholesome, more effective, more economical Baking Powder ever was or can be produced, than that we now offer you.

Justice should be found in every city and town through out the length and breadth of the land, and we solicit your kind cooperation in our efforts to place it there, feeling confident that the closest investigation and the severest ordeal to which Baking Powders can be subjected will prove its intrinsic merit and fully bear out all we claim for it.

With this introduction we are content to place our *Justice* Baking Powder before the public, and referring you to the accompanying memorandum of prices and style of packages at foot,

We are, very respectfully yours,

TABER, HARKER & CO.

VOL. XI, NO. 2. SAN FRANCISCO, OCTOBER 19, 1883. PRICE TEN CENTS.

A St. Helena Winery and Vineyard.

A travelling correspondent of the *Chronicle* has been taking a run through Napa Valley and we extract the following from his description of the country, the vineyards and the cellars:

St. Helena is the seat of more than a half-dozen great wine-making establishments, which consume all the grapes grown in this section, and frequently levy on Sacramento for a supply. Nearly every farmer seems to be engaged in vine-growing, but it takes capital and skill to carry on a winery. Still I noticed several places on the roads about St. Helena where a good deal of wine was made in very primitive quarters. One place, in particular, had merely a rough shed, which housed the large vats from the sun, and under this the crushing was carried on and all the processes which enter into wine making. The wine-cellar here, by contrast, was a big stone building, on the erection of which much care had evidently been expended. But this place was an exception, the majority being admirably arranged for work and representing a large outlay for machinery and the vats and tuns which fill the wine-cellars. Of all the wineries about St Helena,

CHARLES KRUG'S

Is, by all odds, the largest and most complete. It is about a mile from town, on the pleasant road which leads to Mt. St. Helena. There are 135 acres in grapes of all varieties, the old Mission grape being represented by a field in which the vines are more than 20 years old, the trunks in many cases as thick as a man's thigh. The dwelling house here is unpretentious, snugly placed in the shadow of a handsome grove but the new barn and the great wine-cellar are palatial, the latter built of the same handsome stone to which reference has already been made.

AMONG THE GRAPE PICKERS.

On this place one may watch every process of wine making. The grapes grow in thick clusters close to the main trunk of the vine, and the thick foliage of the younger shoots acts as protection from the sun. Grapes on vines which by mishap had lost this leafy screen were found dried and ruined when half-grown, by the three-days norther in June. The picker is provided with a box with oblong holes in the two ends for the hands, which holds about fifty pounds of grapes and a pruning knife. He cuts the clusters of grapes and places them carefully in the box. When one is filled it is taken to the end of the row and another is then filled in the same way. It is tedious work because the picker is compelled to squat on his haunches, the grapes seldom being more than a foot or a foot and a half from the ground. It is not so tiresome, however, as cotton picking, because some respite is gained in placing the grapes in the boxes. The Chinese make good pickers, on account of their stolid industry and genius for plodding, and they are largely employed in the valley. It is said that a good hand will pick a ton and half of grapes in a day, provided the crop is good. This may be, but none of the pickers whom I watched would average over a quarter of this amount. They took things in a very leisurely way, and no doubt were paid by the day, instead of by the ton. The ordinary price is $1.50 a day for white men and $1 for Chinese, the laborers boarding themselves. A large vineyard with a good force of pickers in it looks more like a Virginia tobacco plantation than anything else, the grape vines being about the height of a well-grown tobacco plant and the color being similar.

CRUSHING AND PRESSING THE GRAPE.

When enough boxes of grapes have been picked to fill the high box of a farm wagon the team is driven down through the roads which intersect most of the vineyards and the boxes are loaded, being placed carefully one upon another, and then the grapes are taken to the front of the wine-house. Here is a long wooden chute, with an endless wooden apron inside, which is called the elevator. Upon this the boxes are emptied, one by one, from the wagon, the machinery is set the apron in motion, the grapes are whirled up to the top of the apron and dropped into the hopper. From this they fall into the machine which is the stemmer and crusher combined. It consists of an arm wheels which rotate in opposite directions with great velocity. The grapes are rapidly stripped of the stems, which are thrown out in a pile at one side, while the juice and skins fall into a trough beneath. From this they are drawn off into a large tank, and after several days, varying according to the rapidity of the fermentation, the new wine is drawn off into casks, and the skins lees and seeds which have risen to the top are taken out and put in the press. The wine-press looks precisely like a cider press in a large mill. At Krug's, hydraulic pressure is applied, and in this way every particle of juice was extracted. There is very little that is picturesque about the actual crushing and pressing of the grapes. The place is wet with the juice, which, if the grapes are red, gives the press a gory appearance. The must has a strong but not unpleasant odor. A man is engaged in testing the wine to see whether it is fermented sufficiently to draw off from the huge vats, each of which contains 5,000 gallons. He pulls out a small spigot, and forth gushes a slender stream of rich-colored Zinfandel, which he holds to the light in a small glass to judge of its color and freedom from lees. The skill of these men—mainly Germans and Swiss—is extraordinary. They seem to possess additional senses, and to judge by signs not apparent to the non-technical observer. Their judgement must be accurate also, as the premature drawing of a vat means the spoiling of a large amount of good wine, while the neglect to draw it is almost equally fatal to the delicacy and flavor of the wine. The pomace of the grapes, after it has been thoroughly pressed, is taken to the distillery, and by the addition of a little water is converted into excellent brandy. Even this does not end the usefulness of the grape, for the remains of the pumice make a good manure.

At this winery they expect to make this year between 200,000 and 300,000 gallons of wine from a dozen varieties of grapes. The Mission grape alone is not used here for wine. It is crushed and thrown into two huge vats of 12,000 gallons each, and, after the proper fermentation, is distilled into brandy. Of the other grapes there was three-quarters of an average crop of all with the exception of the Riesling and Malvoisie. The Riesling was badly injured by the norther and only about one-quarter of the yield of last year will be realized. Of the Malvoisie about two-thirds of a crop was secured.

IN THE WINE-CELLAR.

The wine-cellar of this place is worth a journey to see. It is a vast stone building with the natural earth for a floor. Its capacity is 600,000 gallons and there are at present in its rows of fine oak casks about 300,000 gallons of wine of all varieties, varying in age from one to ten years. The wine casks here hold about 1500 gallons.

They are made of oak, with finely-polished heads. At the lower part of the head is a little trap door, inserted so neatly that one can scarcely detect the line of division. When the cask is empty this door is removed and the workman enters and cleans the cask. The opening looks very small, but where he can get his head through there he is pretty sure to worm his body in. Even on a hot day the cellar strikes a chill to the visitor who comes from the outer air and sunshine as he walks down the long, dim avenues, between the rows of huge casks. The lower row is composed of the casks which, by virtue of their size, may be called tuns, for the diameter of the oval head is never less than six feet in the longest direction and is frequently eight feet. On the heads of the casks is the name of the wine with the year of vintage. Above this row is a staging of 4x4 scantling on which rest smaller casks, the ordinary hogshead, and above this is still another row of the customary wine barrels. On the floor above is built long tiers of redwood vats for the accommodation of the freshly-crushed grapes another year, since the space now used for that purpose in the front of the cellar will be monopolized by the wine-casks. The great difficulty is to find good storage room, the vintage in the cellar being in excess of the sales of old wine.

AN ARMY OF WORKERS.

Some idea of the magnitude of the operations carried on at this winery may be gained from the fact that in the season 100 hands are employed in the field and cellar. The force of pickers is usually about forty and this small army keeps the wagons making constant trips to and from the field. The picking this season began on the 24th of September, and it is expected that it will continue for eight weeks. Just now (a week ago —ED. MERCHANT.) there is a comparative lull in wine making which will last for a few days, as everyone is taking advantage of the fine weather to allow the grapes to ripen a trifle more.

The winery which has been described is typical of the establishments of this valley; the others differ from it only in their smaller size and less capacity for producing wine.

G. H. F.

A California paper asserts that when a Lake county man wants mineral water he puts soap, butter and old tin cans into his well, and the liquid soon tastes bad enough to go 1000 miles for.

In this city 100,000 children earn their own living, and at least that number of other children would "die first." When they are dressed in men's clothes they are called "dudes."

Special Inducement.

As a Special Inducement to our Friends to help us and the special attention it treats in extending the journal which they so prized again, THE

SAN FRANCISCO MERCHANT,

We will send free to any person who sends us the names of two new subscribers, with their subscription money (five dollars) a handsome copy, bound in board and cloth, of

THE WINE PRESS AND THE CELLAR.

BY F. H. RIMMON.

For press notices see advertisement in another column.

AN EASTERN WINE EDITOR.

Mr. B. F. Clayton the editor of the *Wine and Fruit Grower* of New York, has for some time given a very liberal portion of his valuable columns to our production California wine producers are under obligations to the *Wine and Fruit Grower* as well as to *Bonfort's* for the kindly interest they take in the welfare of viticultinists. At present Mr. Clayton is attacking the pernicious practices of wine-dealers and others in stretching and adulterating our and other wines, using false labels and falsifying brandy. In this he is doing our California wine makers a great service. The consumpriton and exportation of California wine has been injured seriously by the action of unscrupulous Eastern houses.

By permission of the President of the State Viticultural Commission, we print below a letter, not intended probably for publication, written by Mr. Clayton which treats on the matters alluded to above.

"Office Wine and Fruit Grower, }
New York. Sept. 25th 1883. }

Mr. Arpad Haraszthy.

Dear Sir: In reply to your esteemed favor of the 11th inst., I thank you for your full answer to my note and invitation to California. I hope to make a tour through your State in 1884, probably in the vintage season. I am glad to learn that he dealers in domestic wines are doing so well on the Pacific Coast. The same cannot be said of the dealers in Californias here. Whatever the cause, there is certainly an uphill pull for all of them, if I except those who deal in bogus wines; of course the price is not of so much importance with that class. This market is ruined with cheap sophisticated trash made here, in great part, by houses claiming to handle California wines, and worse still, many of the largest California houses here; viz: their representatives, are selling 'crooked' wines—'split in two'—and not only that but 'pasteurized' until they are 'dead as door nails' and incapable of any improvement by age."

[Mr. Clayton is, we think in error. The recognized representatives of the leading California wine makers and dealers are not so insane. But there are a number of houses in the East, we know, who profess to sell California wine largely, who only buy pure wines to use as a foundation on which to build upon trade in cheap "stretched" "split" "gallized" and "pasteurized" wines. These rascals do immense injury, because they represent their trash to be "pure California wines" and many people try them wash and drink it. I believe that is what California produces and naturally do not drink much of it. Ed. Merchant.]

"Then again nearly all sound pure grape juice wines from California are bought up by our importers and after blending are re-christened 'French wines' and sold as imported. How can we look for success or progress with American wines so long as this damnable condition of things continues? The Ohio and Virginia wines are brought into market here in better condition and handled better than the California wines."

[Are you sure Mr. Clayton that Ohio and Virginia wines are the pure product of the grape? Are they not colored? Is not sugar, cane or grape, largely added to them? If not, where comes the outlet for the produce of that grape sugar company's factory whose production you advertise as being specially manufactured for the use of wine makers and which is recommended in your columns as being so much better than ordinary grape sugar or even cane sugar for wine makers purposes? Are not your reasons given in the first part of your letter, viz, the pasteurizing of the medium wines so largely by one class of Eastern dealers and the disguising of the best under French labels by so-called importers, the causes of California wine apparently selling at low prices? If Ohio and Virginia wines are superior to California, why are they not used by the "wine splitters." Is it not because they have been "pasteurized" already?—Ed. Merchant.]

"The consequence is the red wines are sought for at prices ranging from 25 per cent to 33 per cent higher than the Californias. Here again you see another reason why the California trade proper is falling behind. Some steps should be taken next winter to break up this devilry and get rid of this medium. Instead of new tariff laws we want laws regulating the manufacture of our own wines and a statutary wiping out of bogus labels and bogus wines. If the leading manufacturers put their heads together a plan can be devised that will be general in its application and I would give it my energetic support.

I am etc., very truly yours,

B. F. Clayton."

Again Mr. Clayton errs. Our Eastern wine customers took 200,000 gallons more of wine within the past twelve months than in the previous year. This shows anything but a falling off. Mr. Clayton's recommendations are excellent, and California wine makers will be grateful for his suggestions and gladly avail themselves of his assistance in procuring the passage of a general law against false labels and falsified wines and brandies.

THE NEW VARIETIES.

St. Helena, Oct. 15, '83.

Editor Merchant:—

As a mite towards the mass of experiences with varieties for the reform of California vineyard stock, the following lines may be of value; the more so because it is just the time for procuring cuttings of one variety, which, to judge from the first trial, seems to fulfill the purpose as a dark and fine-colored wine. The importance of such varieties for our industry is obvious. Nature, through them, gives us the natural means of supplying, by blends with grape juice alone, what, in years like that of the 1882 vintage, is lacking in our red wines—color. The first few bunches of grapes from grafts of last Spring, of the *Petit Bouschet* vine from the Natoma Vineyard, have experimentally been fermented. The color of the juice is something surprisingly deep and dense, actually six colors, and of the finest ruby tint. The juice, which is red, weighed only 18.5 saccharine. The acids are those of a modified Teinturier, and the whole juice seems to be the improvement Mr. Bonschet had intended to reach over the Teinturier. In fact, at least, as regards the color, it is a perfect success. Respecting the newborn wine of the Bouschet, it will require yet some weeks to form an opinion. But it is, unmistakably, a variety which will give us the same advantages the planters in France enjoy from the growing of the Petit Bouschet. I find in the quotations of Beziers, Sept. 22, that at Courcelles, Salles and Coursan, the price of the wine of that grape is from 32 to 34 francs the hectoliter, while the Aramons may be had at 18 to 23 francs—a certain proof of the high value to commerce of the Bouschet. We may have to consider that the first fruit from shoots right off the mother vines in France may yield us a fruit close to the latter; whereas, the nature of the vine here, in course of years, will be modified, perhaps perfected, and therefore, in the future, differ from what we obtained this season; but doubtless, respecting color, we may reckon upon success with the acclimatization, and it will not be amiss to utilize the first experience, however incomplete it may be. There are other varieties which will also be of great consequence for California vineyards, and the Bouschet may not be the greatest success. I see the Petite Syrrah, under the same circumstances, from the Natoma Vineyard grafts, is yielding a wine of a color really grand. There will be the finest Italian color varieties grafted there; and at Mr. Krug's, we shall see grand results from the now ordered Marzeminos, Trioldegos, Lagreins, Rifoscos and others. These will surprise us with their beauty next Autumn. We have already the splendidly colored Lenoir, &c. We shall also have Mediterranean varieties that yield those wines the French wine trade takes by millions of gallons from Spain. It is well that we have in California enterprising planters who do the "trying of all," that the vintner may bye-and-bye be able to keep the best.

F. Pohndorff.

Half a loaf is, no doubt, better than none but a newspaper man never gets a chance to loaf at all.

The *American Bottler* compliments Mr Clayton, editor of the *Wine and Fruit Grower*, on his assault on adulteration and imitation in wines and falsification of brandy.

Mr. Kohler, of Kohler & Frohling, informs us that h has purchased an interest in Mr. G o. West's new vineyard at Mountain, in the San Joaquin valley. It contains 75 acres planted last spring, and 200 more acres will be planted next year. Kohler & Frohling are now interested in three counties: the Mintum Vineyard, Sonoma and Los Angeles.

THE WINE MARKET.

[For Exports and Imports, see Merchandise Market.

The bulk of the vintage of 83 may be said to be over with the close of this week, but yet some of our wineries will be engaged until about Nov. 10 if the weather continues fine, on cleaning up, racking up and odds and ends. Prices of grapes in the south, delivered at the winery, have run from $18 to $25, in the north at from $22 to $35, and in some few choice lots of new foreign the equivalent of $40 has been paid.

Unless the second crop of grapes is secured, which, however, the rest at the present time every probability, the yield will be less than last year. Under no circumstances can we have more than 10,000,000 gallons, or more than last year's vintage. The quality will average far higher in color and body than in 1882, and we shall have some wine far superior to anything we have hitherto produced and this will give us an indication of what we may expect when our new vineyards, planted with the choicest foreign varieties, come into full bearing.

There are no round lots of 82 wine in growers' hands, except those who are holding for higher prices or who job, and therefore we will deal in our quotations.

Brandy—Original Government Gauge in Bond made from Wine—

"THE WINE PRESS AND THE CELLAR,"

A MANUAL FOR THE WINE MAKER AND THE CELLAR MAN

A Few Press Notices.

[S. F. Daily Evening Bulletin.]

"The most timely California book of the season " " It is safe to say that no work adapted to California wine-making and wine-keeping, which has yet been published is at all approachable to the volume under consideration. The arrangement, classification, and indexing shows a wonderful amount of care. The indexing is so thorough and the classification so perfect, that the person desiring to consult its pages for any particular information desired, pertaining to the special subjects of which it treats, can readily refer to it.

[S. F. Chronicle.]

"The Wine Press and the Cellar," by E. H. Rixford, is a practical manual which contains hints and suggestions of value to the most practical wine-maker, while it gives ample instructions to the amateur vineyardist. It is the work of a man who has had experience in growing grapes and making wine in this State, and it therefore has not the fault of so many similar treatises, that it is written for climate, soil, and natural conditions at variance with those of California. The author has levied upon the literature of wine-making for his materials, finding the most valuable suggestions in the French authors, but he claims to have presented here, for the first time in English, a complete guide to wine making. The book is divided into sections, the titles indicated by a heavy-faced type, while a complete index still further assists the searcher after the facts. The book is well gotten up and ought to have a wide circulation in the country.

[St. Helena Star.]

"A glance through it discloses a vast amount of interesting information about wine-making, both in this country and in Europe " " " This is a subject on which our people should be especially informed.

PRODUCE MARKET.

The Imports and Exports given below are up to Wednesday evening.

FLOUR—
Imports, 301 bbls. Exports, 13088 bbls
Receipts of week, 12957 8 qr sks
The market continues steady and export demand fair. The Bristol exhibits characteristics of a feeling of the Story Mills, Vallejo, and will carry about 15,000 bbls of Extra for Liverpool.
Extra, $5 37½@5 50. Superfine, $4 00@4 50. Country dates, $5 75@4 00. Bakers' Extra $4 50@5 00 per bbl for jobbing parcels.

WHEAT—
Imports, 98 49 lbs. Exports, 387,150 ctls
Receipts for the week, 570,060 ctls
The purchases by our Foreign Liverpool agents during the week, but in Chicago and New York a slight decline is noted. The local market is strong in both as regards sample and speculative transactions. Parties largely interested have been taking care of account of the stock on hand, on the 15th of the current month, in San Joaquin, Stanislaus and Merced counties and report an aggregate of only 140,000 tons, an amount much less than was expected. From the same source information is given that the stock in the warehouses in Stockton contained only 13,000 tons, against 20,000 tons on Oct. 15, 1882. Rumors are also current that many other sections of the State will not show as great an out turn as was anticipated in July and August. That many dealers believe that the actual yield in the State has been overestimated is evident from the fact that buyers are anxious to secure desirable parcels at higher figures than were quotable a week since through a review of the Eastern and European markets would not justify such purchases.
In the sample market, $1 50 is the top price bid for No 1, though for a slightly better quality $1 77½ would be paid. Strictly choice milling could probably be placed at $1 73½. On call yesterday 8,883 was disposed of at $1 71½ and B, the season, at $1 85¾ per ctl.

BARLEY
Exports, 2,236 ctls
Receipts of week, 52,675 ctls
The market has shown a hardening tendency all the week, and the announcement of a permanent and important change in the freight tariff on barley for New York, New Orleans and St. Louis, via the Southwest Route, caused great activity on the part of buyers, and daily enhancement in values. Already a train of 25 cars, fully loaded with choice brewing, has been dispatched from San Jose for New York, and it is said that others are engaged to follow.
These circumstances give parties who are "long" an opportunity of furthering their views, and so the shorts are called upon session to session of the Call Board, to make good their marginal deposits. So far, no "squealing" has been noted, but that large losings have been made is quite evident, when we take into consideration that there are an unusually large number of contracts out, and that the advance within a few days has been from 5 to 6c per ctl.
Traffic by sample is light, local consumers taking only sufficient to meet immediate requirements. Many choice Merced and mid-lers made considerable purchases of choice brewing about the close of last month, when prices for the same were exceptionally low.
By sample, feed is quotable at 95c@$1 06 for dark-coast to choice bay, brewing; 1 07½@1 12½, Chevalier, $1 35@1 55 for fair to choice bay. Sales of No 1 feed yesterday afternoon were made as follows: Seller '83, $1 07½; Seller season, $1 05. Buyer season, $1 10½ per ctl.

OATS—
Imports, 6919 qrs. Exports, 548 ctls.
Receipts of week, 11138 ctls
The fast steamer from Washington Territory brought up sacks of 1,000 sacks and Humboldt furnishes comparatively small consignments. Several car-loads have recently arrived from Nebraska.
It is said that the cause of light shipments from Puget Sound ports is in consequence of holders refusing to sell for less than figures quoted in this market, thus compelling the buyer to turn speculator on the future of this market, a position which few are inclined to assume. That Humboldt has not been a more liberal shipper is unaccounted for, and it is well known that the crop in that county was unusually large.
By sample we quote: Black, $1 30@1 40; $1 15@1 70 per ctl—latter for extra choice for milling purposes.

CORN—
Imports, 180 sks, 1171 ctls. Exports, 113 ctls
Receipts, 36620 sks
The market is weak at rather lower rates, the cause for which is not apparent, as receipts are very light, and stocks in the city small.
Nebraska, $1 45; Large Yellow, $1 45@1 50, White, $1 60 per ctl.

BUCKWHEAT—
Receipts of the week ctls
Growers forward only occasional small parcels, and as supplies on hand are light, quotations are entirely nominal. For Buckwheat Flour local consumers are entirely dependant upon supplies which come overland.

RYE—
Receipts of week 3262 ctls,
Receipts have increased and market dull and weak at $1 30@1 35 per ctl.

MILLSTUFFS—
Imports, Exports, 624 ctls bran, 1522 ctls millstuffs
1 Receipts of week, 14663 sks Bran, 4719 sks Middlings, 3781 ctls Ground Barley, 645 sks Ground Feed.
We quote: Ground Barley, $23 50@24 50 per ton. Middlings are selling at $17 50@$20 per ton; Wheat Bran, $15 50@16 per ton; Oil Cake Meal $32 50; Feed Corn Meal, $35@36, Cracked Corn, $36 per ton.

HAY—
Exports, 125 tons.
Receipts of the week, 2059 tns
We quote: Alfalfa, $7@8; Wheat, $10@$12 50; Stable, $10 00@12 00. Wild Oat, $10@$12 50, Oat, $9 10, Barley, 10@11 per ton.

STRAW—
Receipts of week, 85 tons
Quotable at 40@50c ₰ bale, as to condition.

SEEDS—
Imports, 10 lbs, 714 sks. Exports, 6 sks
Receipts of week, 81 sks mustard, 202 sks flax, 271 sks alfalfa, 202 sks canary.
Flax quotable at $2 75@3 00 ₰ ctl. Canary, 5½c for Chili, Alfalfa, 12@15c ₰ lb. Timothy, 8@8c for native and 9@9c for imported. Mustard, choice Brown, $2 25@3 00 ₰ ctl. White, $2@2 50. Hemp, 5@5½c. Rape, 1½@2.

BEANS
Imports, 140 sks. Exports, 278 ctls
Receipts of the week, 21,001 sks
The situation remains unchanged. We cannot find that there has been any decline in values, but they are not moving as they should at this season of the year, which is mainly due to the move a tive for this variety.
Colored are moving slowly, but the prevailing impression is that they will become scarcer after a while, and so prices are maintained.
White is under a strong pool organization—"the big fellow" in the hands of the syndicate is held like an axe over the heads of dealers and no one "on the outside" knows what a day may bring forth—still it is very evident that the leading syndicators are not at all likely to put 2½c for such poor Beans as the Syndicate Beans are and allow good ones which are worth fully a half a cent more to fall below 2¾—that is judging by similar facts of other years.
The policy of an operator who knows how to operate might be different but we do not think it can possibly be in this case, for one would be always a peddler.
Our quotations are for round lots from the wharf Small White, $2 75; Pea, $2 75; Bayos, $3@; Pinks, $3¼@; Reds, $2½; Butters, $3½@—, as to size. Limas $3¾

VEGETABLES—
The market has been very steady during the week the only changes being in Tomatoes, Peas and Beans which have all advanced. The quality of the Tomatoes is very good, and the demand is large.
We quote: Carrots, 35c@37½c. Turnips, 75c@$1 00. Cauliflower, 60c@75c ₰ doz. Cabbage, 60c@75c ₰ ctl. Garlic, 1½@2 ₰ lb. Celery, 50c ₰ doz. Dried Okra, 20@25c ₰ lb. Dried Peppers, 10c@10c ₰ lb. Green do, 50c@75c ₰ box. Green Peas, 3c@3c ₰ lb. Tomatoes, 65c@75c ₰ box. String Beans, 2½c@3c ₰ lb. Artichokes, 40c@75c ₰ doz. Summer Squash, 50c@75c ₰ box. Green corn, 8c@15c ₰ doz. Green Okra, $1 25 per box. Egg Plant, 50c@75c ₰ box. Lima Beans, 3c@3c ₰ lb. Beets, $1 ₰ ctl. Parsnips $1 ₰ ctl. Marrow Squash, $8@10 ₰ ton. Cucumbers 75c@$c per box.

FRUITS—
Imports, 4 cs fruit, 4 cs lemons. Exports, 270 box fruit, 1638 box apples
Strawberries are fairly sold of sale, while arrivals lately have been free. The cold weather has interfered with the demand for Watermelons and they go off very slowly. Bartlett Pears and Blackberries are now out of the market. Apples of good quality find quick sale and fine lots for export bring higher prices than our quotations. Sicily Lemons and California Oranges are higher, while Mexican oranges are lower.
We quote: Domestic Strawberries, $10@12 ₰ chest. Apples, 40c@$1 25 ₰ box; Pears, 50c@$1 25 per box; Quinces $1 50. Figs, 30@c 50c ₰ box. Plums, 35c@$1. Grapes, 40c@75c ₰ box. Watermelons, $1 00@$6 00 per hundred; Canteloupe 75c@$1 00 per case. Cape Cod Cranberries, $10 00 per bbl. Western do, $10 00 per bbl.
Preserved figs, $10 00@11 00 per box for Sicily, and $1 50@2 00 for California; Limes, 87@75 00 per box for Mexican; Tamarinds, 12@15c per lb, Bananas, $1 75@3 00 ₰ bunch, California Oranges, $2 25@2 50, Riverside, $2 50

NUTS—
Imports, 2 bags, 11400 cocoanuts. Exports, 11 sacks nuts
We quote: Cocoanuts, $8@9@ ₰ 100; California Walnuts, 8@9c ₰ lb, Chili do, 8@9c, California Almonds, hard shell, 7@8c, soft shell, 11@15c, Filberts, 14@15c; Pecan, 12@13c; Peanuts, 7@8c; Brazil Nuts, 12@13c; Hickory Nuts,

HONEY—
Exports, 504 cs
There is a small, steady demand for Extracted
We quote: Extracted, 6½@8½c; Ex White Comb 18c, White, 15c, Dark, 12½c.

BEESWAX
Imports,
We quote 28c@30 c per lb.

DAIRY PRODUCE—
Imports, 5 bbls, 13520 lbs butter, 6360 lbs, 5 cs cheese. Exports, 12525 lbs butter, 5055 lbs cheese
The market is gradually but steadily falling, the high prices having shut off consumption. As each decline is noted the demand increases.
We quote: Point Reyes, 12½@45c, Choice, 37½@40, Fair to Good, 22½@30, inferior lots from country stores, 16@17c, firkin, 20@21c for old and 24@25½ for new. Eastern, Dos 17c. Pickled Roll, 25@27½. Cheese, California, 12@15c for choice; 11@12½ for Fair to Good, Gilroy, in drums, 15@17c; Eastern, 17@18c, Western, 8@12½c.

OLEOMARGARINE—
We quote the range from 20 to 22c, according to package

EGGS—
Imports, 1122 bxs. Exports, 267 bx
The egg market continues as it has for three weeks, without change in quotations, but the competition among buyers is gradually ceasing, and we may expect lower prices next week.
We quote: California Eggs, Choice Ranch, 42½@45c per doz; Fresh, 30@35c, Eastern, 25@32½c.

POTATOES—
Exports, 1201 ctls
Receipts of week, 31,1660 sks
River Reds have been a drug, selling at 50c. Good Early Rose are in better demand.
We quote Chili Garnets 85c, Early Rose, 45@60c; Reds 50c, San Leandro Peerlies, 50c, Tomales, 45c

ONIONS—
Exports, 361 ctls
Receipts of week, 3122 sks
The market has more tone than for any other week this season. We note better prices
We quote the market at 55@60c.

POULTRY—
We quote: Turkeys, Live Gobblers, 17@19c ₰ lb; Turkey Hens, 20@24c; Dressed ——; Young Rafts, $5 00@6 00; Old Roosters, $4 50@5 50; Hens $6 50@7 00; Broilers, $4 50@5 00, according to size; Ducks, $6 50@7 ₰ doz; Geese, $1¾ per pair
HIDES—
Imports, 89 bls. Exports 8470 lbs.
Receipts for the week, 1665 bls
The market is active for strictly choice hops at 17½ @18c, but second quality and yearlings (that is, hops from yearling vines) are extremely dull, and purchasers do not care about touching them at any price. The New York market has been advancing rapidly during the past few days on export orders, but the brewers are buying very sparingly. Though the market to day is firm, yet it has no stability. There is a general feeling in New York that though the market may advance further, yet it is just as likely to decline. This feeling necessarily stops speculation. Another item of the California crop is the inequality of the hops. Five samples taken lately from a lot of 700 bales, proved this, as no two of them were alike. The Washington Territory hops this year are the best of the coast hops. Dealers in New York are very particular and reject lots that last year would have been accepted

WOOL—
Imports, 100 sks 37 bls. Exports, 515 lbs
Receipts of week, 5013 lbs
For Wool market see Wool Department.

HIDES, SKINS, ETC.
Imports, 1 bl, 1026, hides, 93 bdls skins, 58 pkgs, 77 tns tallow. Exports, 291 bdls tallow.

THE WHEAT FLEET.

During July, 21 vessels cleared of 12,622 register tonnage carrying (including 1602 ctls, valued at $2571, shippe to miscellaneous ports) 385,680 ctls of Wheat valued at $550,234 besides 31,013 bbls of Flour valued at $177,533, which includes 20,109 bbls valued at $124,513 shipped to China and elsewhere

During August, 24 vessels cleared of 32,820 register tonnage carrying (including 4922 ctls, valued at $6,390, shipped to miscellaneous ports) 556,039 ctls of Wheat valued at $1,061,049, besides 86,641 bbls of Flour valued at $422,558, which includes 45,503 bbls valued at $221, 018 shipped to China and elsewhere

During September, 35 vessels cleared of 53,106 register tonnage carrying (including 1812 ctls, valued at $3,187 shipped to miscellaneous ports) 1,752,317 ctls of Wheat valued at $2,790,053, besides 78,050 bbls flour valued at $391,174 which includes 57,153 bbls valued at $275,124 shipped to China and elsewhere

SEATTLE—Per str Walla Walla, Oct 9—2620 tons coal

Finance and Trade.

Money is in good demand, both for local use and for shipment abroad. Hongkong has been drawing largely on this market of late. In addition to the large shipment of specie by the last steamer, both through public and private channels, over $200,000 in Exchange on Hongkong (local currency) went forward. There is no difficulty in getting 7 per cent. for money on warehouse receipts and similar collateral. Most of the Savings Banks are asking that figure on city real estate. It is said that some Wheat borrowers have recently been called upon to increase their margins. To day there is an active demand for Exchange on New York at firm rates. Fine Silver and Mexican Dollars are in light supply. Domestic exchange is quoted at 15c premium for sight drafts on New York and 25c for 10 days' sight. Bank bills on London are drawn at 49⅝@49 11-16d for 60 days' commercial bills on London, 50d; Refined Silver, 14 2-15 per cent discount; Mexican Dollars, 89½@90⅝c

Inquirer No: the phrase "it goes without saying" did not originate as a reference to the telephone. It applies very often, though,

MERCHANDISE MARKETS

To prices quoted below are for net car load lots and for cash unless otherwise stated.

ALCOHOL AND LIQUEURS—
Imports, 175 cases, 2 cills. Exports, 85 pkgs

BAGS AND BAGGING—
Imports, 78 bls bags. Exports, 78 bls bags
The market is firm, with a fair demand. The receipts of Standard Calcutta wheat have been light, and the report of advance in the price of the same, has had its effect on the market. COAL—
Imports, 12269 tons Pacific Coast, 2198 tons Foreign and Eastern 500 tons coke Exports, 29 tons coal.

Australian coal is still arriving freely Very little Foreign outside of Australian has arrived so far this month. Indeed West Hartley and Scotch Splint command full prices. The prices asked by importers for early loading are so much above buyers ideas that but little business is being done It is only a question of short time when buyers must advance to bring about business The Wellington Company is delayed in getting their anticipated supplies to market.

A large quantity of English Steam Coal will be due within the next 30 days. A market has already been made for the major portion of it at full figures.

It is announced as a fact that the present low rates of freight on grain outwards will not induce ship owners to head their property to this part with low priced coal.

Importers prices of coal, Foreign and American, to arrive: Australian, $7 ₱ ton; Liverpool Steam, $7 ₱ $7 ½; West Hartley, $8 ₱ $8 ½; Scotch Splint, $7 ₱ $8; Cardiff Steam, $7 ₱ $7 50; Lump Lehigh, $13 ₱ 13 25; Egg Red Ash, $10 ₱ 10 ½; Cumberland, bulk $10 ₱ $10 ½. Spot prices are as follows: Australian, $8 00; Liverpool Steam, $7 50; West Hartley, $9 00; Scotch Splint, $8 50; Cardiff, $7 50; Lehigh Lump, $14 00 @ 13; Cumberland, bulk, $11 50; Egg Red, $11 00.

TIN, ETC —
Imports, 551 bxs.

WINES—
Imports, 235 pkgs Foreign. Exports, 30 cs 44887 gals 20 kgs native

See market report in the Wine Department.

Freights and Charters.

The charters this week have not resulted in reducing the number of disengaged vessels, owing to arrivals. Consequently with a considerable number of loading ships the condition of affairs does not improve In fact it grows worse and ships yesterday could not obtain the figures offered for them a week ago Even at the lowest figures charterers can only hope to come out even, on the assumption that the British market must improve before the vessels about to load are reported "off coast." The engagements of the week are:

Ship St David, 1595 tons, wheat to Liverpool direct, 35s Ship Iroquois, 2120 tons, wheat to Liverpool direct, 31s 9d Ship Wandering Jew, 1650 tons, wheat to Cork, U. K., Havre or Antwerp, 38s 9d. Havre or Antwerp direct; 39s 3d. French bark Augustine, 752 tons, wheat to Cork, U. K., or Continent 40s Ship B. P. Cheney, 1259 tons, wheat to Cork, U. K., Havre or Antwerp 38s 9d. Liverpool, Havre or Antwerp direct, 39s 3d. Brig W. G. Irwin, 351 tons, returns to Honolulu in Spreckels' Line. Ship C. F. Sargent, 1764 tons, wheat to Liverpool direct, 35s. British ship Brighton Tower, 1598 tons, wheat to Liverpool direct. Owners' account. Ship Jeremiah Thompson, 1830 tons, lumber from Barnard Inlet to Rebecca Bay, private. British ship Larnaca, 1435 tons, wheat to Cork U. K; private—chartered prior to arrival Ship Commodore, 1909 tons, wheat to Cork, U. K.; joint account. Schooner Anna, 228 tons, lumber from Humboldt to Honolulu Schooner Chas Speckels, 231 tons, merchandise to Kahului

T. F. OAKES, New York ..... President
W. J. HOTTNER, St. Paul ..... Gen'l Supt
H. H. BROWNING, Portland ..... Ass't Supt
ALEX. BADLAM ..... Agent San Francisco

RETAILERS' CORNER.

Trade during the week has been very good, but without any features worth mentioning outside of the excitement in Coffee. Oregon has not as yet ceased buying Eastern goods in this market, as its merchants prefer feeling their way before they branch off into a new field. They know how they will be treated in San Francisco, but they do not as yet know how they will come out by trading in the East, so they are moving cautiously.

SUGAR.

The local demand during the week has been very good for refined, but the sales of grocery grades have been slow, on account of the light stock. Arrivals this week have brought considerable Keg Sugar, which has just been sampled and will be offered to the trade this week. The New York market is steady with an active demand. Sugar is firmer in London, and this helps to strengthen the American markets. In the opinion of London brokers, who have had many years of experience, a continuation of the latest reports as to the prospects of the beet crop is likely to bring about an advance of $\frac{1}{4}$@$\frac{3}{4}$c per pound in the present price of Raw Sugar, which is now unusually cheap. It has been remarked, as showing the extent to which an excitement in the Sugar market may go, that one has only to call to mind the year 1879, when a deficit in the Beet Sugar crop of 100,000 tons was the cause of an advance in London in a single month of 1$\frac{1}{2}$ cents per pound.

COFFEE.

We are beginning to feel the scarcity of Central American Sugars, which was prognosticated early in the season. Supplies are low and prices are constantly advancing. Of course, it may be said that the advances are due to the action of the New York market; to a certain extent this is true, but it must be remembered that when we had good stocks the New York market might fluctuate, and this market would remain steady, only following violent changes; but during the past few months this market has followed all of the New York advances, but none of its declines. Shipments to St. Louis are now restricted, on account of the small stocks. The New York market is active and excited, and the latest mail advices report the market at 11$\frac{3}{4}$ for fair, though telegraphic advices report sales since at 12c. Stocks in New York cannot be replaced at present figures. Advices from Rio lately have been very unsatisfactory, many private advices being contradictory, but the latest official advices we have, report that the strength of the New York market had been reflected there, causing an advance in prices with large purchases and a material reduction in stock, the receipts not having been sufficient to satisfy the demand. The purchases for this country for the week aggregate 130,000 bags, out of which it is said that about 70,000 bags have been taken on speculation by a local syndicate there.

RICE.

The local Rice market has been in rather an unsettled condition for some time. Portland, which has always been a large purchaser of Asiatic, has decreased her orders—she now importing direct from Hong Kong. Since Portland has had communication with the East, and, in fact, for some time before, she has been doing her utmost to extend both her import and export trade This shows a worthy enterprise, and though it hurts San Francisco individually, yet this Pacific Coast is the gainer. Asiatic Rice is lower, as is also Hawaiian. The Eastern market is very firm there being a large demand for shipment at the Rice centers, which keeps receipts absorbed.

CANNED GOODS.

Our canneries are still busy on the Grape crop, which is very fine—the grapes canned being large and luscious. The Tomato crop has been very fine but light, and prices are high. Business is very brisk and many varieties are in very small stock. In the East, Tomatoes are in a very precarious condition, and, should a frost set in, which is very likely, prices will be high. In Chicago, California fruits continue in good supply, but the cheap trades in Apricots and Pears seem to have been pretty well taken up, consequently they are somewhat firmer.

DRIED FRUIT.

This is the busy season among our Dried Fruit dealers, and arrivals are free. The Eastern demand continues good at unchanged rates.

Trade Failures.

There were 160 failures in the United States reported to *Bradstreet's* during the week ending Oct 13th, 4 less than the preceding week, 20 more than the corresponding week of 1882 and 54 more than the same week of 1881. Compared with the previous week the middle states had 13, an increase of 12, New England states 28, an increase of 2, southern states 15, a decrease of 8, western states 52, an increase of 2, Pacific states and territories 24, a decrease of 12, Canada and the Provinces 32, an increase of 11. Among the firms reported embarrassed were Colman Brothers, clothing, San Francisco and New York; Max Wallstein, knitting works, New York, Hill & Rowe, manufacturers of boots and shoes, Canterbury & Bickell, manufacturers of boots and shoes, Rhodes & Co, auction and commission boots and shoes, and Kimball Brothers, manufacturers of carriages, Boston, Blain Brothers, railroad and mail contractors, Huntington, Pa., Union Iron Company, Portsmouth, Ohio, Prager Brothers, clothing, Portland, Oregon, Exchange Bank, Topeka, Miss In the principal trades they were as follows: Grocers 15, grain dealers 15, shoes 11, liquors 10, manufacturers 10, hotels and restaurants 9, dry goods 7, produce and provisions 6, butchers 6, carriages 6, clothing 5, grain and flour 5, harness 4, hardware 4, lumber 3, tobacco and cigars 3, lumber 3, drugs 3, furniture 3, bakers and confectioners 3, fruits 3, laces 3, banks 2, commission 2, gents furnishing goods 2, stationers 2

Oregon Trade.

PORTLAND, Oct 12th —Trade is quite active and there is a good call for all seasonable lines By way of San Francisco, steamers arrive with full freights, the principal arrivals in the grocery line being canned goods, rice, sugar, coffee and tea A falling off is noted in syrups, lard and a few other articles which are being received from the east by rail These receipts are fast increasing Orders for goods this way have also been enlarged, and we may soon look for quite a boom in trade. Despite this we learn of fifteen or more instances where there is an apparent hesitancy about cutting loose from San Francisco and forming new eastern connections This hesitancy is not natural, and does not indicate any inability on the part of our merchants to trade direct, for we have houses here that command unlimited credit and have ample working capital to enable them to carry out most successfully, if not less slow, as all wish to feel their way and act with careful knowledge as to the situation. In time we shall receive direct from the east all goods that arrive here via San Francisco, while our merchants must continue to send us what we want of the goods received there by water. The new arrangements must gradually shape themselves as there are many interests established in those localities that must be considered.

The street yesterday wore a rather quiet appearance, the Jewish houses all being closed. To-day will be more than usually busy on account of it. All notices are moving along evenly and there is no important change in the different produce lines

During the month of September eleven vessels sailed from Puget sound for foreign ports, viz: one to Liverpool, one to Queenstown, one to Melbourne, one to Panama, three to Valparaiso, two to Honolulu, one to Levank and one to Townsville They carried 5,019,422 feet rough, 1,572,750 dressed, 2,779,143 surfaced, 139,392 t and g, 900,000 shingles, 500,000 lath, 5,000 pickets, 7,195 feet spars. Six of these loaded at Blakeley, two at Tacoma, and one each at Seabeck, Gamble and Discovery. During the same month seventeen vessels entered at Port Townsend for coal and lumber cargoes.

The vessels for the week have been the Banffshire, and Killechran, under wheat charter, and the wooden ship Ice King, seeking The Western Belle, Shenir, Scottish Tar and Harry Morse have finished grain cargoes and several others are loading, to be finished within ten days. Arrivals have not been up to expectations but shippers are not embarrassed in consequence. The slow receipt of wheat causes delay in loading. In the week one spot charter has been written, that of the wooden ship St. Lucie, terms private. Freights are weak, and it is claimed that the St. Lucie did not get over 50s for orders Exporters are holding back and owners are apparently indifferent.

TONNAGE STATEMENT

In port, loaded	4,610
In port, engaged, iron	11,866
In port, engaged, wood	1,993
In port, disengaged, wood	12,265
In port, steam on its chance	2,740
On way to this port	52,000

Foreign wheat advices have continued in good tone, but no advance has been realizable here. To-day a dull and inactive market ruled Charges, with quotations week. It has all along been held that the more we advanced the number would exhibit a desire to come, but exporters have continually expected that such would be the case Almost every one interested in wheat and tonnage is waiting, and shall hold to it That theory helped is very general, witness the export movement to date and the passing new business as being, since it had been expected that October would show strong, whether it did or not. Now it is the theory that is presented that could be constructed out of data as it is to turn, and some of the most hopeful are rather disappointed that the thing is not already consolidated The world's wheat harvest is stated at about 2,000,000,000 bushels, and Europe's wants are placed at about the same as in 1882-83, when the United States exported 185,000,000 bushels This year it is claimed that we can furnish but little more than one half that amount When figures are resolved to, it appears plain enough that values should advance, and had figures not disappointed upon setting, we look at them, then at the actual condition of affairs at present, and feel the uncertainty of speculating with them. Exporters are to-day paying for wheat options placed at San Francisco by the existing state of affairs, and holders are not satisfied Before harvest it was common sol ection that ships would charge 40 cts, and speculators carried the market at this Now the deal of 42$\frac{1}{2}$@45 cts Wonderful as it may seem, as probable, yet there could be a much similar experience with wheat The present shows how uncertain some speculations are The local market is quoted at $1.50 for ea-kers, and 1.57\frac{1}{2}$ for valley, yet it is impossible to name good shipping grades except at an advance, which often amounts to 2$\frac{1}{2}$ cents Receipts for the week show that there came in 162,571 centals against 382,767 last week, while the eastern section has sent 511,476 against 370,563 last year.

Receipts of Flour are light, and only for local trade. There is no export movement to begin beyond a few hundred barrels to go to China Values are firm at $5 for standard brands, less usual trade discounts. A Bremen vessel is due for Oct 20th, and ships about two thirds the amount at the same time last year, but values are firm at $5.25@5.75 for good to choice brands.

Overland receipts of provisions include a quantity of lard, but no meats as yet Stocks are not large and choice cuts are sought after

The Pacific mail steamer will take 600 for good Receipt have exceeded expectations

A quiet wool market rules with 18@c named a extreme for any offering Advices indicate quiet markets and less trading

Buyers of hops hold back and holders decline to force sales It is said 18@20c can be had here, but not sales are reported —*Oregonian*

Spirit of the New York Markets.

NEW YORK, Oct. 10th The weather is all that could be desired, and the distributive trade is in some departments moving at an unchecked pace, while in others, notably Iron and most kinds of textiles, it is the keenest manufacturing. As to the latter, the volume is probably about as large as it has been at any time during the Autumn, albeit the local clearings shows a considerable large decrease, as compared with the corresponding period last year. Thus for the past week the gross clearings of our local banks were but $739,872,806, against $1,121,300,247, the causes pending upon the part, a little upon the whole. Fifteen other leading cities of the country also show a decrease, while eleven show a gain, the latter from pressing St. Louis, Cincinnati, Louisville, Kansas City, Memphis, Columbus, Peoria, Syracuse and Hartford. The numerous failures which continue to crop out are very embarrassing to the mercantile and banking interests, creating as they do an impairment of confidence and a more conservative tone. While the danger of severe reverses, this spirit of caution, which every where predominates the business interests would be a reassuring feature, demonstrating that the commercial affairs and commerce is perhaps healthy, and not to such an extent has the confusion of credit in its worst forms, together with normal speculation, been carried to the point of danger. Not at worst developments have a paralyzing effect upon legitimate business enterprise The cover pushed in some lines of manufacture which marked the year 1882, during the first 1883, the only really dangerous, threatening element, and the extent of the excess and tardy prosperous condition of the people at large would safely warrant a more active business. Even however, as the signs address to the surface of the various politics, there can be no possibility of serious disaster, even if the currents of commerce are compartively disorganized by the political issues of the campaign. Wheat, Corn and Oats have further decline though closing with a reactionary tendency The high grades of Flour are depressed and relatively cheaper than Wheat Beef, Pork and Bacon are dull and lower but Pork and Beans are firmer Butter, unless firm, the high prices current having turned the demand largely upon the cheap substitutes Cheese is dull and lower Eggs in fair demand and steady to a shade higher Wool is steady and a little more active Hides and Leather remain dull Tobacco is very firm but quiet Sugar is dull and weak Coffee is dull and lower Spirits Turpentine is steady to a shade lower and less very dull Leading kinds of Drugs and Dyes are moving somewhat more freely and there is a better feeling in the market Petroleum is dull, the export demand being restricted by the scarcity of tonnage, and advances in rates. Crude Certificates are lower Other oils are quiet and generally steady Raw Sugar is firm and in good demand Refined is quiet and barely steady. Molasses is in moderate jobbing demand Coffee is strong and active at a further advance. Teas is quiet and steady Rice is in moderate request Spices are steady Pig Iron is dull and weak Copper is steady. Tin is inactive Lead is lower Spelter is dull Ocean freights are dull, but firm owing to the continued scarcity of tonnage. *Shipping List.*

"All things come to him who waits," sadly remarked the tramp as he dodged a brickbat and slid over the fence just in time to escape the eager jaws of a blear-eyed bulldog.

TOBACCO MARKETS.

SAN FRANCISCO.—Cigar manufacturers have been looking around this week for good '83 and also for Rio and fillers, and several lots have changed hands. There is a large supply of '83 common grades. Seconds and '83 selections are in unquoted line. '82 Sumatras are scarce and fairly Vuelta-abajo too much for manufacturers' wishes to allow it to be popular. The stock of '80 leaf is becoming smaller and there is very little in the city that is desirable. It is said that some of the Havana makers have begun on '82 fillers but this we can not confirm.

Stock of good Havana leaf are small, there is plenty left to color, a medium fair but of desirable would sell freely.

Most manufacturers have a fair amount of orders, but the rise is trouble brewing with Chinese cigar makers A number left for their own country by the last steamer and more are expected to go by the next. Those who remain are restive and demanding an advance of 5 cents to 12$\frac{1}{2}$c per hundred.

Manufactured tobaccos are higher in the East manufacturers having very generally raised their prices This has given a firm tone to prices here but has not resulted in any advance Our market has been steady during the week past with a fair demand.

[U. S. Tobacco Journal.]

NEW YORK, Oct. 6th —What is patent to everybody is, that financially the leaf and cigar manufacturing business is, as a whole, thoroughly sound The fact that, under certain unsolved wealthy leaf operations, the week ending with August 10 and 12 as a rest, creating quite an apprehensive feeling in the market, has nothing to do with the general state of the trade at the large, and more to the middle, these cigar manufacturers throughout the country has made money during the past few years, besides having become more expert in their calling, generally, in making the best cigars to deal with judgment and care The gradually diminishing practice by manufacturers of returning goods is a fit illustration of this And it is *their* purchases which guide the sales in this line, as to which reports and predictions, and what do they buy now? will be the question asked by the reader Their main purchases are the Havana seed on the various States and the better grades of the '82 Pennsylvania. The latter especially is looked for with avidity, but there is so much pretended "good" in this crop, that frequently purchases are not fortunate But if holders of really fine crops, one's own holdings, the best should always be shown to purchasers when the best is asked for The '82 Hav-seed is almost entirely out of the hands, '82 Pennsylvania and '82 Bay Flats, as well as '82 Ohio, also have to a great extent gone into second hands. Unfortunately and unfortunate for the trade the '82 Connecticut crop is not all in. Three months ago, after careful examination, we estimated its quality, and all the holders, together with the interested country press, declared our judgment to be false, malicious and biased. We said it was bad tobacco, they said it was good. The manufacturers did not buy it, do not buy it. Ergo, we were right.

[New York Tobacco Leaf.]

LONDON, Sept. 19.—Messrs. Grant, Chambers & Co report as follows: The trade has been but a moderate demand for Am grown this during the past week, and with but few exceptions the sales made have only been for immediate use. In some descriptions of unfashionables there has been a better demand. Western leaf and strips have not attracted usual attention. Virginia Leaf—Bright in color is in request; in strips rather little has been done Maryland—only the colory classes are in demand. Ohio—none of the late arrivals are yet sampled Cavendish—slow of sale.

A. D. BELL . . . . . Editor.

FRIDAY . . . . OCTOBER 19, 1883.

We think we manufacture a good deal in San Francisco, and sometimes boast of our progress and attainments in this line. We are not doing any wonders, perhaps barely a tithe of what we should do. There is Denver, with $23,000,000 of capital invested in manufactures, and furnishing employment for 22,000 people. We do do not equal that in this good city of San Francisco, and yet we have 200,000 more population than Denver. We sometimes speak of Oakland as already an important manufacturing point. Denver has eleven times as many persons employed in manufacturing as Oakland.

We read three things in one of our morning dailies which should attract the attention of thoughtful people. A scoundrel is deservedly sentenced to fifty years imprisonment for an outrage on a woman worse than murder, and the Goodwin Act, as it is called, will let this man loose when he has served twenty-seven years. We read that in Connecticut in this year of grace, near the close of the nineteenth century, when tolerance and liberty of action are supposed to rule, that two Americans have been arrested and fined for taking a quiet buggy ride on a Sunday afternoon. Lastly, that the Attorney-General of Massachusetts has given a formal opinion to the Governor of the State that a woman is not a person. From this, those who run may read, that in California the most atrocious crime is not adequately punished, though the jury may convict and the judge pass sentence; that in Connecticut intolerance, such as disgraced the 16th century, prevails to-day in the United States; lastly, that a lawyer (?), elected to the highest position in that State which boasts most of its culture and advancement, does not know the meaning of words, does not know the commonest legal acceptation of terms and is ruled by ignorance and prejudice.

The proposed Farmers' Weather Signals, to be carried by all mail trains, white flag for clear weather, blue for fair, red for doubtful and black for stormy, seems an excellent device, but will, for some years, be of more use to Atlantic farmers than to those of California. If the resolution introduced by J. C. Patrick and adopted on Tuesday last by our Chamber of Commerce, asking Congress to grant an appropriation fo a branch signal service office in this city, is effective, not only would the flag system, but the daily weather indications for the Pacific Coast be much more valuable. California meteorology has less to do with the meteorology of the Atlantic Coast than western Europe has, and San Francisco is too far from Washington for the station reports to be transmitted there and the results sent back here for publication.

Some twelve months ago the MERCHANT published an article on the inconvenience to travellers through nearly every railroad and State having a different time standard. We also gave a short statement of the several plans, and the objections made thereto, looking for uniformity or an approach thereto. The leading railroads have now agreed upon making four standards. A traveller starting from the East will only have to remember that after going west of Columbus that his watch will be an hour fast, west of Denver two hours, on this coast three hours. Remembering this, he can always have the local railroad time, and come to San Francisco and return without regulating his watch.

RAILROAD COMPETITION.

It is now ascertained that the Northern Pacific Railroad Company has not agreed with the C. P., S. P. and U. P. railroads to maintain the contract system, and there is a strong possibility of a battle between the rival roads, during which our merchants will have the option of shipping merchandise from the East by sea or land and by any railroad route they select. As all railroad battles end in compromises and new pools, and sooner or later the old lines may regain their control of San Francisco business, our merchants may well consider which side they will take in a fight, the result of which, in all probability, will be, if they desert their old masters, that some day they will have to return to their allegiance. Villard's interests now seem to be in gaining favor with San Francisco shippers; when his interests favor deserting them he will do it. Competing lines never show any gratitude to those who espouse their cause, when they most need help.

THE EXCESSIVE WHISKY STOCK

The over-production of whisky during the boom of a few years ago may be judged from the following facts brought out at the recent meeting of the Western Export Association, held October 11th in Chicago. The demand for whisky for home consumption hardly changes from year to year, notwithstanding the increase of population; a gratifying fact, showing that our people are more and more inclining to milder beverages. It has stood for some time at about 80,000,000 gallons a year. But the capacity of existing distilleries in the United States is about 250,000,000 gallons, and, to make matters worse, nearly every distillery that is rebuilt after destruction by fire or decay is constructed on a scale three or four times as large as that pulled down or destroyed. The amount of whisky in bond is enormous, there being not less than 24,000,000 gallons in Kentucky alone, on which duty must be paid within twelve months from date unless Congress extends the time. As that State produces now only 7,000,000 gallons of the 80,000,000 consumed each year, if other States have over produced in the past at the same rate as Kentucky, the whisky in bond, on which taxes must be paid before November, 1884, amounts to 280,000,000 gallons or three and one-half years consumption. It is not probable that the actual quantity is so large, but it is, beyond all doubt, large enough to cause the liveliest anxiety to owners and also to the banks which have advanced on this kind of security. It is also large enough to alarm friends of temperance who do not wish to see the country deluged with abnormally cheap whisky

THE RINCON DEL DIABLO.

The "Rincon del Diablo," or "Escondido" ranch, containing 12,653 77 acres, together with 160 10 acres adjoining, in San Diego County, has been purchased for the purpose of developing a large raisin, olive, prune and other dried fruit industry. Wine making will be incidental. The purchasers are all well known men, most of them possessing an abundance of means. They are Wm. B. West, George West, F. M. West, Otis Perrin, Sidney Newell, George S. Ladd, Ira W. Ladd, George E. Ladd, Thos. P. Moore, R. E. Wilhoit, A. H. Randall, of Stockton; Charles A. Wetmore, of Pleasanton and F. M. Otis, of San Francisco. Arrangements are now being made to perfect an incorporation, and as soon as we learn something more definitely of the plans of this company, we shall make it known. We know that it is the opinion of these gentlemen that raisins of the finest quality can be produced on these lands without irrigation, and that they have been selected carefully with a view to a permanent and safe investment. A topographical survey will soon be made, and then it will be determined how much of the property may be set aside for the establishment of a first-class colony. Meanwhile, the plan is to commence work the coming Winter by planting 200 acres in vines, and a large nursery for future use; also to lay out avenues, plant trees, etc. The property is said to be very picturesque, and to be provided with an unfailing body of water from 10 to 20 feet below the surface, without any intervening hard pan. A small vineyard and orchard (oranges, lemons, olives, pears, etc.) on the place already demonstrate its future possibilities beyond question. A few Stockton wind-mills will be put up to show to those, who think they may need irrigation how practical it is to obtain it without paying fabulous prices for water rights. Mr. Wetmore is going south again, next week, to arrange for the survey of the property.

IMMIGRATION.

If there is any town in California which would not rejoice on a few accessions to its population, any county which would not like to have a few more farmers, and vineyard and orchard owners who would not like to see a few more sober, industrious, white married laborers, with families, settle among them, we do not know where they are. To satisfy these needs we want immigration, and the best kind of immigration is American. To obtain this needed immigration, our merchants organized the California Immigration Association. This Association, under the administration of its president, A. R. Briggs, is doing a work the full value of which cannot now be seen and cannot be estimated even for the future. Still some of the good results of the first year's work are so palpable that there is every encouragement to continued and increased exertion. At the monthly meeting of the California Immigration Association, held on Tuesday, President Briggs gave a detailed account of his observations during his recent, second, trip East on immigration business and the conclusions he had formed.

He favored a thorough distribution of printed matter in relation to the State, which he thought could best be effected through the railroad offices in the Western and Middle States; the principal purpose of an agency would be to superintend the distribution, and he thought that St. Louis would be the favorable place for the office. The European agent was reported as expected to arrive, via. New Orleans, with seventy-four immigrants. In the party are three French girls, seeking employment. President Briggs thought that, as the number of applicants for California homes has of late been largely on the increase, the prospects were that next year's immigration would far exceed that of any previous year. Besides the 74 immigrants mentioned, 250 others were to arrive here to-day. Secretary Street reported that during the month of September, 5,771 immigrants arrived in the State, and up to the 16th of this month, there had been 2,394 arrivals. Of the latter number, 413 had stopped in the interior before coming on to San Francisco, and 812 had registered at the office of the Association during the past six weeks. The Secretary reported cash on hand at the last meeting, $494. Subscriptions collected $728 65. Total, $1,222 65. Disbursed, $797 73, leaving a balance on hand of $424 92.

THE NAPA VALLEY WINE COMPANY.

The Napa Valley Wine Company has issued a circular addressed to the leading grape growers and wine producers of Napa County, inviting them to become stockholders and cooperate with the promoters of the company in carrying out the objects for which it was formed, namely buying, manufacturing machinery and dealing in pure, sound wines and brandies. The President is the owner of a young but large hill vineyard, planted with the finest varieties of foreign vines. The Directors and Secretary are all of them either large wine makers vineyard owners or both and without exception are men of wealth. The need of such a company to handle and mature California wines in large quantities and place them on the market when sufficiently aged, pure as when they come from the press, and sell to dealers who will distribute them to consumers under honest brands and labels has long been felt and in very few years ten such companys would hardly be too many. Everything, the character and experience of the managers, promises to make this initial enterprise a grand success. The following is the circular:

ST. HELENA, Oct. 6, 1883.

Dear Sir.—We respectfully call your attention to the organization of this company and request you to aid us by taking some stock therein.

This corporation was organized on the 14th day of September, 1883, its capital stock being $500,000.

The chief objects of its organization are: To buy and mature pure, sound and fine California wines and brandies, and to sell the same, under our trade mark, as the products of this State, and not under false and foreign labels.

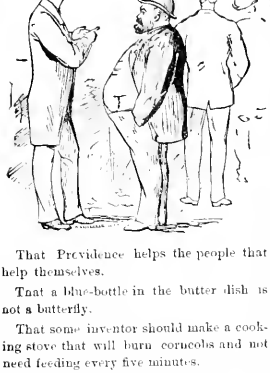
Napa Valley has already become conspicuous as one of the chief wine-growing districts of the State. The soil and climate are most favorable for the production of fine wines, hence the wine growers of this valley are highly interested in the stability of an enterprise that cannot fail to add greatly to the reputation of California as a wine-growing State.

We intend to commence business immediately after the close of the present vintage. All preparations are made for that purpose and a valuable trade is secured through long-established agencies. We are giving our best energies and all our experience to the successful inauguration of this new enterprise. We have put in our capital because we are sure it will be a paying business, and because we know it will advance the interest of every grapegrower and wine maker in our valley, and, indeed, in the whole State.

We repeat, we will buy and store only pure, sound and fine wines. Demand for such wines is daily increasing, and trade in such choice wines, carefully handled, commands success.

We therefore invite you to participate in this new enterprise, thus fostering its success with your name and your money. After a careful examination of all the questions of doubt which may arise in this new business, we assure you that this enterprise must be a prosperous one to all who engage in it, and that its influence upon the grape and wine interests cannot be measured by dollars.

A. L. TUBBS, President.
W. W. LYMAN, Secretary.



That Providence helps the people that help themselves.

That a blue-bottle in the butter dish is not a butterfly.

That some inventor should make a cooking stove that will burn corncobs and not need feeding every five minutes.

That no State is getting a better class of immigration than is now coming into California.

That the Lord loves a cheerful giver and the newspaper publisher a liberal advertiser.

That wine producers should themselves set a good example and when they indulge should call for wine, not whisky.

That ripe grapes would be worth ten dollars a ton to fatten hogs on if our wine and raisin men could not do better.

That a good subject for discussion at the Academy of Science would be: What are the constituents of California beer?

That a quarter of an acre of sorghum sown in drills will keep twenty pigs growing for a month.

That "Honesty is the best policy," said the old man to his son, and to himself he said "I have tried them both."

That it is estimated that there will be 25 per cent less fat cattle from Texas and the southwest this year than last. The new northwest is the coming cattle country.

That the State that sells the most surplus and produces and manufactures most of what it needs will be the richest in the Union.

That a few more honest juries, severe judges and more common sense on the Supreme Bench would do a world of good in California.

That Judge Toohy did well in that fifty year sentence; will other judges have similar spirit and crush out this epidemic of criminal outrage of women, which has recently disgraced our city.

That importing ready-made clothing from the East does not seem to pay. Better try manufacturing clothing here, out of cloth made in California out of home-grown wool.

That in our County jail are eleven inmates of murderers row all living by the courtesy of our Supreme Court to whom they have appealed or are about to appeal and not one of them expects to be hung.

That a San Francisco fireman has been dismissed for using vulgar language. If every policeman who uses vulgar language were dismissed, the force would be reduced in a month from 400 to 50.

The latest adulteration, or substitution, discovery is that of an intensely sweet substance obtained from hydro-carbons of the coal tar group, which can be used for sweetening glucose. The name given this substance is benozoic salphinide.

That Rixford's "Wine-Press and Cellar" is going off like hot cakes. A most useful book to wine makers, cellar masters, new beginners, dealers, saloon and hotel keepers and private families, indeed to all who make or handle California wine.

The sorghum sugar industry, it is said, is really promising well this year both in Kansas and New Jersey. The latter works expects to turn out 500,000 pounds centrifugal sugar. In Italy sorghum is also doing well. In the neighborhood of Paris, France, it does not ripen.

That Utah claims to raise better potatoes than can be grown elsewhere and to be able to produce all the potatoes the United States can eat. Then why not set about the work and give up trying to build a bastard paradise on polygamy.

That there is some sugar sold in this State that will dry and harden at the bottom of a tea cup like cement. This is a new thing in California. Where does it come from? It is not Eastern sugar this time, for we import none. Is it China refinery sugar? Nuff sed.

That the best method of ending the Mormon infamy is that proposed by a Chicago journal: Disenfranchise every voter in the Territory, as those in the District of Columbia are disenfranchised. The Gentiles, being good Americans, are willing to surrender their civil rights for the general good.

That the progress that the Southern California colonies are making is extraordinary; they are filling up fast and those who build and enter upon permanent occupation seem so well pleased with their selection that they induce their old neighbors and friends in the Eastern States to follow them.

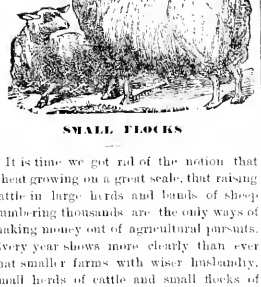
That our production of raisins this year is over 125,000 boxes; in three years it bids fair to be 400,000 and most of this production will be in San Bernardino, Los Angeles and San Diego counties. The New England immigrants who have settled in colonies will be the great raisin makers of California.

That Mexico has been growing a little too fast financially, and has to borrow money at sixteen discount on the hundred dollars and nine per cent interest. We expected this when those subsidies and franchises to railroads, giving freedom from customs dues and taxes were being granted so liberally.

That English manufacturers are getting quite interested in American politics. They have been told that the Democrats are sure to carry the country on a free-trade platform, or, at least on a tariff for revenue with incidental, etc., and that is the same thing. John Bull may get left, however, for large numbers of Democrats are not prepared to support a free-trade policy, naked or masked.

The *Wine and Fruit Grower* is going a gunning for fiends in wines and liquors, including split, pasteurized, gallized and doctored wines, and also complains of three months old wines being put on the market, and adds. "There are, fortunately, a few, a very few, dealers who seek out genuine wines and brandies, and who buy and sell no other, and who age and ripen their wines before offering them for sale. These merchants are doing a very great service to the future wine maker of this country; they are making a reputation for American vineyard products, and opening the way for successful trade to all who desire to deal in straight honest goods. They are educating the public taste to discriminate between the real and imitation article. But alas! they are too few. In this city they may be counted on the fingers of one hand.

The inventor of the Chassepot gun is now keeping a hotel at Nice. His charges are enough to make a guest go off



SMALL FLOCKS

It is time we got rid of the notion that wheat growing on a great scale, that raising cattle in large herds and bands of sheep numbering thousands are the only ways of making money out of agricultural pursuits. Every year shows more clearly than ever that smaller farms with wiser husbandry, small herds of cattle and small flocks of sheep pay far better interest on the capital employed than the larger enterprises. Small flocks of sheep can be tended, fed and the wool washed as large flocks cannot, and the proportionate profits are double what the big sheep men can make.

The *Texas Wool Grower* on this subject says:

Numbers of farmers do not care to handle sheep unless they can have quite a flock and make a special business of it. They cannot see where the money comes in from them and do not learn that the greatest profits are realized from small flocks. Fifty sheep, however, will do more towards furnishing a regular income than any other kind of stock, and the product in wool and increase will represent three bales of cotton and more if the sheep are of superior quality. An ordinary sheep should shear four pounds of wool, worth 22½ cents per pound to-day, which would be 90 cents per head, and on fifty head would be $45, or one bale of cotton, and the lambs should should not be less than 45, worth $2 per head, $90 or two more bales of cotton. This, with ordinary care, with a small flock, can be counted on, and to-day the outlay would not be more than $2 25 per head for four-pound sheep.

In larger flocks such figures could be called in question, as the yearly result depends on close management and other essentials in the way of feed, which represents money, but the average farmer wastes the feed that fifty sheep require for their sustenance and well-being. In the culture of cotton the expenses for seed and labor are heavy; the bale represents the product and oftentimes the margin of profit is very small; the seed is often sold for a fraction of its value as feed for sheep, and yet the raw seed from three bales of cotton, assisted by grazing in a small patch of grass and in the fields on which crops are raised would handsomely support so small a number. The sheep returns to the ground in manure, evenly distributed, a full profit on its keep, but until money is spent for fertilizers the value is not appreciated. In the older States they are kept as much for their value to the land as for other profits.

A flock so small as to be thought insignificant will show most handsome results. The following is an example taken from the *Southern Planter*. If a liberal deduction for feed is allowed, it will show the year's profit to be one hundred per cent. In Texas more would be realized for the wool and less for the lambs, but the expense for feed would be next to nothing on so small a flock:

October 28, 1882, I purchased 21 sheep, costing at my farm	$ 69 25
February 13, 1883, 10 sheep with 7 young lambs, cost	48 50
	$117 75

All purchased at Richmond stock yards.

SALES.

February 27, 1883, 6 lambs	$ 30 00
April to July, 1883, 20 lambs	100 00
May, 1883, wool	25 11
	$155 11

Leaving me 55 sheep and five lambs, for which I have been offered $125.

NORMAND SMITH

Some Eastern wine makers used elderberries largely this season to color their wines. The *Wine and Fruit Grower* is our authority for this statement,

SHORT STAPLE.

The first point of value in a Merino ram is the length of staple.

Sheep that yield inferior mutton and shear less than four pounds, are not worth investing in.

As sheep don't wear overshoes, they should be folded on dry ground especially Southdown and other breeds that cannot stand wet feet.

Our wool interests may be served by restoring the old tariff, but they certainly need improved methods; better sheep and better care quite as much. Protection against foreign competition should not be demanded very loudly by anybody who fails to give his sheep proper protection against storms, hunger and disease and is careless and indifferent about improved breeds.

A. M. Garland, President of the National Wool Growers has gone to Australia to find out why we cannot compete with foreign wool growers.

The demand for combing wools in Boston has led to three houses sending agents to Australia. One house spent $166 in the forenoon in telegraphing about wool to Australia and $50 more in the afternoon.

In counties where good mutton is in demand a judicious cross of Shropshire and Merino would improve the mutton and the value of the wool not be decreased.

The American woolen manufacturers do not sympathize with the movement of flock masters to restore the former duty on wool.

When a wool grower sends samples of his wool to a commission agent or wool buyer, requesting quotations or bids for wool, if he desires any satisfactory information returned, the samples must be fairly selected so that the average of the clip, and not the very best portion be used as the guide. If a proper average selection is made, the wool grower will be better satisfied when the transaction is complete; and the buyer or agent will not have reason to complain that the quotation or bid was made under a false impression, based upon the selection of choice portions of the clip. Quite a number of samples are sent to the different markets through the mails and very often when the clips follow only a very small portion is found to be equal to samples and the bulk is sold at lower figures. Then the kicking begins.—*Texas Wool Grower.*

The Harvard "annex" for women is eminently successful. Two ladies out of a class of five have become engaged to their teachers and another is permitting one of the young professors to swing on her father's gate.

THE WOOL MARKET.

After three or four weeks of brisk business in Wool in Eastern centres a lull has followed, which has extended to this market. We have had during the week a steady but small manufacturers' demand. Again we have to report no change in quotations.

CALIFORNIA Piano Manufacturing Co.

INCORPORATED UNDER THE LAWS OF CALIFORNIA MARCH 8, 1882

Manufacturers of Strictly First Class

UPRIGHT PIANOS.

Factory, 431 and 433 Fourth St., corner of Bryant. Old Bushnell Carriage Factory.

Salesroom, 30 New Montgomery St., under Palace Hotel.

Our instruments possess the very latest improvements, and in TONE, TOUCH and DURABILITY are absolutely without a superior.

EVERY PIANO IS FULLY WARRANTED FOR 5 YEARS

Our factory is the most complete on the Pacific Coast, possesses every kind of machinery, steam, dry houses, etc., in fact is as complete in all its appointments as any Eastern establishment, producing Pianos of uniform excellence and durability. An examination of our Piano-Fortes is earnestly solicited. Catalogues and full description mailed on application.

WALTER S. PIERCE, Secretary and Agent.

JUSTICE BAKING POWDER.

"Fiat JUSTITIA, Ruat Coelum."

SAN FRANCISCO, June 30th, 1883.

We beg to call your attention to our JUSTICE BAKING POWDER, each can of which we guarantee to be full net weight and to contain nothing but the purest Cream of Tartar and the best English Bi-carbonate of Soda, compounded on the most approved formula.

We make the price as low as it is possible to sell this quality of goods, desiring that the purchasers may feel they are getting value received, ALL IN BAKING POWDER, and that they are not involuntary contributors to extravagant newspaper advertising, or to the placarding of fences, as the art has reached most advise them to too often the case when they buy some other brands. At the same time, *Justice* to the manufacturer, *Justice* to the dealer, *Justice* to the consumer, and last, though not least, *Justice* to ourselves compels us to assert in unmistakable terms that, however *Majestic, Far-fetched*, or *Sweetly Perfumed* the title by which any other is known, no purer, more wholesome, more effective, more economical Baking Powder ever was or can be produced, than that we now offer you.

Justice should be found in every city and town throughout the length and breadth of the land, and we solicit your kind cooperation in our efforts to place it there, feeling confident that the closest investigation and the severest ordeal to which Baking Powders can be subjected will prove its intrinsic merit and fully bear out all we claim for it.

With this introduction we are content to place our *Justice* Baking Powder before the public, and referring you to the accompanying memorandum of prices and style of packages at foot,

We are, very respectfully yours,

TABER, HARKER & CO.

Oceanic Steamship Co.

VOL. XI, NO. 3. SAN FRANCISCO, OCTOBER 26, 1883. PRICE TEN CENTS

KNOX'S WILD SCHEME.

Mr. Knox, of the Currency Department, says *Bradstreet's*, has suggested a plan of continuance for the National Bank system after our bonded debt is paid off, which *Bradstreet's* says it has not seen broached before. The employment and deposit of securities of the European nations as the basis for banknotes. He stated at $8,000,000,000 the combined national debts of England, France, Holland and Germany, and urged that "a currency in this country based on the securities of foreign countries would produce a closer commercial and social relation between us, and any difference that might arise in the future would be settled by arbitration and not by the sword." Neither this scheme, nor any other of the "substitution" schemes, can be discussed in a paragraph, but we hazard nothing in saying that the consideration just stated is much more than sentimental, and is a weighty one. The drawing together of this country and Europe is an inevitable process that is going on every day, and the use of foreign securities as a banking foundation here, other things being equal, would be the best foundation certainly, in the view of political economy and statesmanship. So placed, these bonds would be bonds in another sense—bonds to promote commercial intercourse (for commerce is the great civilizer, after all) and to keep the peace of the world.

We have a great respect for *Bradstreet's* opinion on financial and commercial matters, and are therefore more astonished at the quasi endorsement given to what many would call Mr. Knox's wild scheme. Though the nineteenth century is drawing near its close, wars, if not as protracted between European nations, are nearly as frequent and far more costly than in the middle ages. Suppose we had a banking circulation in this country based on $400,000,000 of European securities, deposited in the Treasury and a war broke out between the United States and one of the debtor nations. One of the first acts of war would be the cancellation of their securities held by us. Again, if we held a considerable portion of the national debts of Russia, Austria, Germany, Spain, France, Italy, may even Great Britain, might not a popular movement compel these powers, or some of them, to repudiate all they owed us, and then combine and defy us to compel payment by force. For over a hundred years the United States has prudently kept out of European entanglements. Mr. Knox proposes to reverse the established policy of the nation. Our capitalists may place their spare profits in British consols, French rentes or Turkish bonds, but our government, or our national banks and government in partnership? No, that would be dangerous. Better abolish the national banking system than that. The entire National bank issue would not pay the cost of three months' European war. It appears to us the wildest sentiment to talk of "a currency in this country based on the securities of foreign countries, producing a closer commercial and social relation between us, and that future differences would be settled by arbitration and not by the sword." Who would arbitrate if all Europe was our debtor? There are jealousies, hatreds and rivalries between every nation in Europe, but they have no such hatred or jealousy of each other as they have for the United States. That is the one point on which they all agree; all their kind words and expressions of friendship are false, that is they are diplomatic. No single nation can pretend to rival us, we are the rivals of combined Europe and if there is a serious war in the future between the two continents, it will not be between France, or Great Britain or Germany and the United States, but the people of the old continent against the people of the new. Ought we then to increase the probability or hasten that calamity by becoming their creditor? We should not make their money interest and their political prejudices agree in seeking our embarassment or humiliation.

Shipping Whisky to British Columbia.

We learn from a decision of the Treasury in the application of Lilienthal & Co., of this city, for permission to repack certain whisky returned from British Columbia as being in illegal packages, and upon which a drawback of the internal revenue tax is claimed, that it appears that Lilienthal & Co., on July 12 last, shipped to Victoria, B. C., five barrels of whisky, and that the spirits were returned on board the exporting vessel, as, by reason of a recent law of the Dominion of Canada, foreign spirits in packages of less than one hundred imperial gallons are not permitted to land. The Commissioner informs the Collector at this port that the repacking of this whisky cannot be allowed, as there is no provision of law for such a proceeding; neither is there any law allowing the return to warehouse of tax-paid spirits once removed, and, in fact, if they were so returned, the statute requires their forfeiture. As to a change of packages invalidating a claim for drawback, the law, he says, plainly says that spirits must be exported in original packages. An original package is that in which the spirits left the warehouse, tax-paid. There is no relief for the claimant, he adds, except by act of Congress making a change in the present drawback laws to meet the requirements of the Canadian laws, which were, no doubt, enacted as an obstruction to the importation of foreign spirits.

Olive Culture.

A correspondent at Oleander, Fresno county, writes to the Los Angeles *Herald* about olive growing, asking a number of questions. All this information and a vast deal more we gave on May 18th. As will be seen in another article, we will reprint the article on Nov. 2d, when the Oleander gentleman can get more information than has been printed outside of the MERCHANT in the English language. The question is, what variety of olives are being sold in Los Angeles? Are they the best? Probably not. The *Herald* answers.

"If olive trees will grow in a very sandy soil, and if a little frost in winter will kill them?" "Will the olive grow where the orange will not on account of the frost?" "Where can young trees be bought and what would be the cost?" "Are they planted the same as peach and other fruit trees, and how long before they will bear?"

Olive trees will grow in sandy soil, or rocky land, or gravelly loam, or clayey loam of a stiff character, but do not thrive or bear well in damp soil. They bear more heavily on upland than lowland that is often covered by fog. In the latter locality the black scale bug is likely to infest the tree. The olive is more hardy than the orange, and grows where there are quite severe frosts. In such cases the tree should be protected by cornstalks, which permit a circulation of air and admit light, and at the same time they protect the leaves from frost. This for the first year only. The trees are always for sale in Los Angeles, but they are more easily propagated by cuttings about two and a half feet in length. These are set in the earth in a hole made by a sharp iron bar to a depth of about twenty inches. After the cutting is placed in the hole, the latter should be filled with water, which fits the earth completely around the foot of the cutting. The hole is then to be filled up loosely and a mound of earth piled up loosely around the cutting nearly to the top, and kept there the first year. It sometimes happens that the cutting will not grow the first year at all, but will start out the second year quite vigorously. The tree needs but little moisture where there are copious winter rains. In dry climates about four times a year would be often enough to irrigate the olive plant. The trees do not bear transportation very well, and many of them die in consequence of removal; but the cutting is hardy, and is not troubled by gophers.

If trees are planted they will need several irrigations during the first summer. They are planted like other trees. But their roots are extremely sensitive and need especial care while being transplanted from the nursery to the orchard. The tree bears usually in from five to seven years after planting from the cutting and in from four to six years from planted trees. In regard to the cost of trees, the latter will be referred to nurserymen to respond. The [illegible] is not favoring any particular dealer. During the winter will contain the advertisements of the leading nursery men who sell trees and cuttings for sale. If the cuttings are large the top should be protected by a coating of wax or clay to prevent being dried out by the sunshine. The tree will bear for two thousand years, or more, and the fruit is very profitable.

Professor Huxley's address at the International Fisheries Exhibition, London, was full of curious information. An acre of good fishing ground, he said, will yield more food in a week than an acre of the best land in a year. He drew a vivid picture of the moving "mountain of cod," 120 to 130 feet in height, which for two months in every year moves westward and southward, past the Norwegian coast. Every square mile of this colossal column of fish contains 120,000,000 of fish, consuming every week, when on short rations, no fewer than 840,000,000 of herrings. The whole catch of the Norwegian fisheries never exceeds in a year more than half a square mile of this "cod mountain," and but one week's supply of the herrings is needed to keep that acre of cod from starving. London might be victualled with herring for a year on one day's consumption of the uncaught cod.

Contemporary Notices.

The San Francisco MERCHANT, containing a full report of the proceedings of the Annual Convention of the State Viticultural Commission, has come to hand. The report covers about twenty-five pages (making the entire paper fifty-two pages), and is very interesting reading. It shows the progress which the State is making, and proves the wisdom of the organization of the Viticultural Commission. All the various problems in this profession are ably discussed by the most practical and experienced wine growers of the State, and the whole may be said to constitute a valuable text book. All the wine growers of the State study these reports, and profit by the experience of the enterprising men composing the Commission, we predict that they will make more real progress in the next two than they have in the past ten years. The MERCHANT is entitled to great credit for the enterprise it has shown in preparing this valuable report. *Wine and Fruit Grower, New York.*

Extract from a letter from Angelica: "Dear Henry — You ask if I return your love? Yes, Henry, I have no use for it, and return it with many thanks. By by, Henry."

Special Inducement.

As a Special Inducement to our Viticultural Friends who purchase the general viticultural interests on attending the journal which is their recognized organ, THE

SAN FRANCISCO MERCHANT,

We will send two, to any person's among us the annual two new subscribers with their subscription money (two dollars) a handsome copy, bound in board and cloth, of

THE WINE PRESS AND THE CELLAR,

BY E. H. RIXFORD,

For press notices see advertisement in another column.

OLIVES AND OLIVE GROWING

On the 18th of May we published an article entitled "Olive Growing in Spain," written especially for the MERCHANT by Fred. Pohndorff. It contained more information than was ever before published in the English language, on the varieties of olives, their botanical and local names, the altitudes at which they flourish, the temperature required to ripen the fruit, whether adapted for table use, pickling or oil, and whether free or shy annual or biennial bearers. The run on this office for that week's issue has exhausted the supply, and at the request of many friends we have decided to reprint it next week, that is, in the issue of Nov. 2nd.

It seems to us that it would have been kind in Mr. Morel's friends to have dissuaded him from publishing an English translation of his extraordinary letter to the *Courier de San Francisco*. Mr. Morel is, we understand, a sick man, and the self-glorification and ridiculous claim that he had saved the vines of Fresno from being plowed up, by his success in fermenting the wine he made at the Barton vineyard, this year, is, under these circumstances, excusable. But, a year or two ago, Mr. Morel's judgement was equal to his skill and as sound as his chest, and if he could regain his health he would be himself his severest critic. Mr. Morel's services to the viticulture of California, none will dispute, and it is fairer to judge him by what he has done than by any foolish words he may have written while struggling with disease.

Dr. J. D. B. Stillman is offering by advertisement in another column, Seedless Sultana rooted vines; this is one of the best raisin vines that vineyard owners can plant.

Kohler & Frohling have bought and engaged at their Los Angeles winery 3,000 tons of grapes, at $18 for Mission and $22 for foreign. They do not expect to get through crushing until the second week of November,

Send $1.50 postal order or one cent stamps, no higher denomination accepted, to the Merchant Publishing Company, and get Rixford's WINE PRESS AND CELLAR. The handiest tool in a wine maker's cellar, invaluable for reference by master or man.

Judge Stanley's Phylloxera-Proof Vineyard.

ED. MERCHANT: Judge Jno. A. Stanley's enterprise has led him to the successful raising of a vineyard of twenty acres of phylloxera-resisting stock, which he proposes to graft over, next spring, to the choicest varieties of claret grapes. The vineyard is on rolling land, near Suscol, Napa county, and exhibits a marvellous growth of Wild Riparia, Clinton and Taylor, the former predominating. The Riparia shows the strongest growth on the gravelliest variety of soils, and Taylor also looks well, but Clinton evidently best adapted to moist lands, where its growth is wonderful. The vines are now three years old, for the most part, some having been replanted to fill vacancies. They might have been grafted at two and even one year old, but the Judge preferred to wait until they were stronger. All the Riparia family root with great readiness when the cuttings are fresh, the difficulty of obtaining imported cuttings in a good condition and the subsequent loss in consequence of the small percentage that would grow, have been serious drawbacks to any extensive planting of these stocks. Our own experience abundantly proves that cuttings from Riparia stock raised here will, with any ordinary care and without irrigation, root as easily as willows; also that the smallest cuttings, less than 1-16 of an inch in diameter and eight or ten inches long, will make in one year very strong rooted plants. The proceedings of the last Viticultural Convention showed conclusively that "the man who raises a vineyard on Riparia stock is *safe*.

LEONARD COATES.

NAPA, Oct. 20, 1883.

Foreign Wine Notes.

From Bonfort's Circular Oct. 10th, we extract as follows: At our last advices from Bordeaux the vintage was on the point of commencing. Although the weather was everything that could be wished, a general impression seemed to prevail among the growers as to the result of the pickings. Many of the vines are very backward, which as attributed to mildew, a comparatively new disease in the Gironde, which is turning out to be more serious than had been anticipated, attacking not only the leaves, but the grape itself, so that it is probable that the juice produced by the backward vines will generally show its defections after the gathering will probably in many instances have to be made at several different times. In the midst of all the contradictory appreciations of the new crop, losiness in Bordeaux remains at a standstill.

Our correspondent at Rions writes under date of September 17th "It is difficult to pronounce judgment upon the vintage which is immediately before us. The quantity will be large, but as to the quality, it is impossible to say anything yet. We may nevertheless be sure that it will not be a *great* year. We hope to make a good merchantable wine, which is something. One thing which may be affirmed with absolute certainty is that buyers will have to pay terrible prices. Some bargains have already been concluded at insane figures. So much the better for us, but so much the worse for the shipping trade, whose business is growing more and more difficult."

Théophile Roeder & Co., in a letter dated Sept. 15 write: "We are entering upon the period of the vintage-buying; for the past two weeks we have been engaging quantities among the first growths in order to make sure of having the necessary quality. We expect to see prices fixed at any moment; the weather is fine, the sun is shining; in a word, the fire may reach the powder at any moment. According to all indications, prices will be very high. We shall be very agreeably surprised if Ay and Bouzy do not reach 1000 francs per barrel (200 litres) and rather fear that they may touch 1200; in any case, we shall be compelled, as in previous years, to submit to any rise that the exaggerated competition may force upon us. Another correspondent writes under date of September 17th. "The vines are looking well, and the vintage will probably commence about the 26th. I think we shall have to pay about 1200 francs at Ay, provided that the wines are of excellent quality. At Bouzy they will probably reach the same price, which you must admit is very high." CETTE. The vintage in the Hérault and in Aude commenced in the middle of September, and the quantity of the new wine will soon be determined. In the neighborhood of Montpellier the quality of most promising by the vines gathered on American stocks has induced out-and-out satisfaction. The quality, however, has not proved so good as was hoped, as the weather generally proceeding the vintage had been very cloudy, and many grapes had been picked half ripe and made to keep. Some sales had been made at from 20 to 22 francs, and on large cellar in Cette had found a buyer at 28. Business generally was in the expectant stage. The vintage in Burgundy is commencing and will probably turn out fine if the fine weather has continued. At our last advices from Cognac the vintage had just commenced, and we are as yet without any details.

In the neighborhood of Barcelona the vintage commences late in September having been delayed for about a week by severe storms. We are without information as to the results. The vintage in the Jerez district commenced a little after the middle of September. The quantity will be fair and the quality ditto. On the Rhone and Mosselle early part of September brought cold rains; gathering was interrupted, and the minds of the growers were filled with the gloomiest for boilings, but about the middle of the month the sun made his appearance again, and as rains of perfect summer days followed it.

If the good weather last long enough, the vintage will come well up to the ratio of an average crop, and the quality will be a good middling one. Under B if, Cruzmach writes: "The harvest promises to be a good one if the weather remains the same as we have enjoyed during the last two weeks. The grapes at Franken, Traunstein, Gutdeil, and Klembergen are far advanced, while those of the Rheingau—the main district—are rather behind time. Four weeks more of fine weather will produce a good middling wine. Some reports, which speak of having a first class wine already secured are most decidedly exaggerated. The facts are that the grapes developed nicely and approach maturity, good results are hoped for. At Cognac business is reported to be perfectly flat.

ANOTHER ACCOUNT ON VINTAGE PROSPECTS.

J. F. Purkington & Co's. circular Sept. 13th says. The excitement in the wine growing countries is very similar at this season of the year to that prevailing among our own farmers, and the anxiety as to what the new crops have to be gathered, that fine and warm weather may be experienced during the next week or two. In France, which commands more attention than any other wine-producing country, the weather, which was wet and cheap alike in July has since considerably improved, although the severe storm of the 2nd inst. did great damage to the vines. Fine weather till after the gathering is now indispensible, and with a fairly good harvest will result. In the Médoc districts the grapes ripen but slowly and with great irregularity. Only half an average vintage is expected, with the result that price is of the ordinary and medium growths will be high. In the Champagne country there is fortunately a good show of black grapes, but the white ones do not ripen at all well, besides which the quantity is not large; the gathering will commence about the 20th. The bulk of the grapes at Ay Mareuil, Dizy Cumières, Pierry, Moussy, and Montbelon have been bespoke by some of the first shippers, and judging from a price just fixed at Moussy (2nd growth) the prices of the best growths are likely to be very high, more especially as the leading firms continue to act in direct opposition, instead of working together so as to secure the grapes at reasonable prices. In the Chiconte country, considering the present limited quantity of vines, a good yield is expected, but the quantity of 1883 brandy is not likely to be large, especially as better prices will probably be realized as wine than brandy. The gathering in the Sherry districts has already commenced, and promises to be satisfactory, both for quality and quantity, while our Oporto friends are most disappointed at present prospects. Tarragona will have good and abundant yield, but prices are absurdly high. The Saumur wine is likely to be very good, with fair quantity. The Burgundy districts suffered a good deal from the storm of the 2nd inst., but there are still undoubted signs of a good yield. On the Rhone and Moselle the weather has been more favorable, and a good vintage is expected. Our reports from Madeira are not encouraging, but from Marsala they are favorably good, and the wines of Hungary promise both quality and quantity. Altogether the outlook may be considered favorable to the consumer, as in most cases stocks of those wines principally in consumption will be replenished, thus avoiding the augmentations in prices which must have resulted had a short vintage been general.

Distiller and Revenue Requirements

As attendant to our brandy-making subscribers, we give place to the following:

U. S. INTERNAL REVENUE, }
Collector's Office, First Dist. Cal. }
SAN FRANCISCO, April 17, 1883.

Circular No. 5.

TO DEPUTY COLLECTORS.

In preparing the new bonds, notice, registry, etc., of rectifiers and distillers, Deputy Collectors will hereafter see that the different classes of papers are made in duplicate, and show the actual date on which the distiller intends to commence distillation. They will attach one Form 26, in column "For use," the words "For use on Oct. 1, 1883," or the correct date applicable to each case. On the 27th, attach the word "entries" and initial the words "On the... day of... 1882."

If a new survey has been made of a still, the date on which the owner desires to commence business as distiller will be shown on the survey. (See circular letter Treasury Department, July 18, 1883.

If the distillery has been owned by other parties and previously surveyed, with the exception of survey must be filled in with additions from the former owner to the new occupancy, in order that the books of the district collector may be permanently closed, and the rights of the new distiller to the number, bounds and business of the distillery may be established beyond question.

The attention of Deputy Collectors is hereby called to instructions contained on Page 92, of Sections 7, No. 7, under Head of Gauging. Hereafter they will see that these rules are fully complied with; that distillers in each division are instructed to report to division deputy before the end of the month the probable quantity of brandy that they will have produced during the month; and that the gauger is directed, upon an order of the division deputy, to gauge the same on time for the distiller to make his monthly report before the tenth of each month.

Until the monthly returns until all the brandy produced by them has been gauged and tax paid or warehoused, with the distiller has been any distilling during the month for which the return is made or not. If no distilling has been done, the report will so state. On the final report the distiller must account for all tampling's upon which he is held accountable. Your attention is also called to the fact that if the grape brandy is to be warehoused, it must be warehoused at once after gauge. Frequently distillers delay to forward the proper notice until considerable time has expired. The regulations prescribe that this notice shall be given on the first of each month, and in time for the gauger to make his monthly gauge, and at the same time put the spirits goods for the warehouse. (See Sections 7, Nos. 5, Pages 12 and 13.)

Deputy Collectors are required to assist this office in having the regulations, in regard to grape brandy distilleries, fully complied with and to bring that department up to A1 standard. All jurats must be taken before a Deputy Collector, or some officer authorized to administer oaths, having a seal.

I desire to promote the welfare of this industry, and there is no better way to attain that object than by a full compliance with the rules and regulations of the Department, and by that means to escape all vexatious assessments.

Respectfully,
C. HARTSON, Collector.
J. E. YOUNGBERG,
Chief Deputy.

[*Official.*]

When Mr. Ruskin says that a couple should contrast seven years he fails to state who should pay for the kerosene.

Immense Yield of Grapes—70 Tons From 4,009 Vines

The St. Helena *Star* is authority for the following: "G. Groezinger, Yountville, had this year on one small tract the largest yield of grapes we have ever heard of. It is a triangular piece, containing 4,009 vines, off of which was picked by correct account 69 tons of grapes, reserving 50 vines for family use, and besides about a ton destroyed by chickens. Seventy tons are 140,000 pounds, which divided by 4,009, the number of the vines, makes nearly 35 pounds to the vine. We do not know how many acres these particular vines make, but as the range is from 800 to a 1000 per acre, there is probably about 4½ acres, which would make a yield of over fifteen and a half tons per acre. The variety is the Frontignan, and the value of the 4½ acre crop about $2,700."

Mr. Groezinger is one of our most intelligent and careful vignerons, and any statement he makes is perfectly reliable. Our contemporaries who, in their zeal to advertise California, often publish misleading statements about the profit on vines, should not cite this extraordinary yield as an example of what wine growers may expect. In Napa county four or five tons an acre is a large average, and in the present year the average yield is probably nearer three than four. Eight and ten ton crops are occasionally gathered, but then sometimes the yield is only two or three, especially of the finer grapes, and five tons is a good crop. The irrigated vineyards of Los Angeles and San Bernardino do better, and 15 to 17 tons has been grown on an acre of old Mission, but seven and eight tons is a big average in those counties.

"Persons and events," said Emerson, "may stand for a time between you and justice, but it is only a postponement. You must pay at last your own debt." There seems to be no need of adding to this statement.

THE WINE MARKET.

[For Exports and Imports, see Merchandise Market.]

The rains though wide spread have fallen on gently as to do little harm beyond delaying the gathering of ripe grapes. The estimate of the Napa vintage and of 1883 and comparison with 1882 is probably a fair example of the vintage in other counties except perhaps that the south may do a little better. We are making this year some wine that promises to be better than anything ever made in California and the general average will be better, the color of our reds will be far superior to last year but the quantity will be short. Judging from the Napa returns, which show a falling off of 20 per cent, we cannot expect much over 9,000,000 gallons as the product of the State. It is hardly necessary to say that is less than the demand could take.

California brandies continue in demand at prices within the range of our quotations.

PRODUCE MARKET.

The Imports and Exports given below are up to Wednesday evening.

FLOUR—
Imports, 2728 bbls. Exports, 40161 bbls
Receipts of week, 109,778 qr sks
Extra, $5 37½@5 50; Superfine, $4 00@4 50
Country ditto, $3 65@4 00 Interior Extra $4 90@5 00 per bbl for jobbing parcels

WHEAT
Imports, 7125 sks Exports, 330158 ctls.
Receipts for the week, 300,608 ctls
In Chicago and New York prices remain about the same as quoted a week since, but European quotations for cargoes are about one shilling per quarter lower. The local market has sustained only slight fluctuations in prices so far as the call board is concerned, but by sample figures are lower and market weak. For round lots of good No 1, by sample, $1 70 is an extreme quotation, and several exporters refuse to pay over $1 67½. For strictly choice milling $1 72½ is the very top price to be had, and millers wants are generally supplied at $1 71¼ on Call yesterday No 1 sold for $1 85@$1 85½, Buyer the season; $1 73¾@$1 74, Seller December, $1 75¾, Buyer 1883, $1 71¼@$1 71¾, Seller 1883.

BARLEY—
Exports, 3935 ctls
Receipts of week, 53631 ctls
The variations in prices from session to session of the call board have been active and important, but at the close yesterday the market was weak and showed a declining tendency. By sample, feed is quotable at $1 40@1 65, brewing, $1 07½@1 12½; bay chivalier $1 35@1 50, seaside, $1 60@1 65. On call yesterday sales of No 1 feed were made as follows: Buyer the season, $1 15⅞, Seller the season, $1 02½, buyer 1883, $1 09; Seller 1883, $1 04⅝@$1 05⅜ per ctl.

OATS—
Imports, Exports, 510 ctls.
Receipts of week, 7475 ctls.
Arrivals are moderate and market steady. Black, $1 30@1 45; White, $1 30@$1 75 per ctl for fair to strictly choice.

CORN—
Imports, Exports, 53 ctls.
Receipts, 2499 sks.
Deliveries of California are exceedingly light, but receipts from Nebraska are increased, and the latter is readily taken by both local and interior consumers. We quote California White and yellow at $1 45 @$1 50; Nebraskas, $1 45 per ctl.

BUCKWHEAT—
Receipts of the week 294 sks.
Arrivals are more liberal, but the market is firm, holders asking $3 75 per ctl for choice.

RYE—
Receipts of week 575 ctls.
Receipts are increased and market dull and weak at $1 25@$1 30.
A barge having on board 350 tons, is now due from Stockton, and the same is to be placed in warehouse to meet call board sales made some time since.

MILLSTUFFS—
Imports, Exports, 826 ctls bran, 1933 ctls millstuffs.
Receipts of week 11550 sks Bran, 3643 sks Middlings, 1400 ctls Ground Barley, 204 sks Ground Feed.
We quote: Ground Barley, $24@25 per ton. Middlings are selling at $17 50@20 per ton; Wheat Bran, $15@16 per ton; Oil Cake Meal $32 50; Feed Corn Meal, $35@36, Cracked Corn, $36 per ton.

HAY—
Exports, 157 tons.
Receipts of the week, 1664 tns
We quote: Alfalfa, $7@9; Wheat, $10@$12 50, Stable, $11 00@12 00; Wild Oat, $10@$12 50, Cow, $9@10; Barley, 10@11 per ton.

STRAW—
Receipts of week, 47 tons.
Quotable at 50@55c ₱ bale, as to condition.

SEEDS—
Imports, 218 cs 10 sks. Exports,
Receipts of week, 324 sks mustard, 176 sks flax, 68 sks alfalfa, 417 sks canary
Flax quotable at $2 75@3 00 ₱ ctl; Canary, 5½@6c; Alfalfa, 12@13c ₱ lb; Timothy, 8@9c for native and 8@9c for imported; Mustard, choice Brown, $2 25@3 00 ₱ ctl; White, $2@2 50; Hemp, 5@5½c; Rape, 1½@2c.

BEANS—
Imports, 3 pkgs 21 ctls Exports, 205 ctls.
Receipts of the week, 34945 sks.
Arrivals during the week have been exceptionally heavy and have had a weakening tendency on all varieties Limas and Pinks have suffered most. Bayos are no lower in price, but they don't go up as was justly anticipated, neither do Whites which it is certain will, when interested parties who are not "in" on them have exhausted all their subterfuges to knock them out.
Our quotations are, for round lots from the wharf Small White, $2 90; Pea, $2 90; Bayos, $3 40, Pinks, $3½; Reds, $2½; Butters, $3¼@—, as to size Limas $3 50.

VEGETABLES—
Peas and Green Beans are becoming scarce and constantly advancing. Other vegetables are steady.
We quote: Carrots, 35c@37½c ₱ sack; Turnips, 75c@ $1 00; Cauliflower, 60@75c ₱ doz; Cabbage, 60@ 75c ₱ ctl; Garlic, 1½@2c ₱ lb; Celery, 50c ₱ doz. Dried Okra, 20@25c ₱ lb; Dried Peppers, 10@10½c ₱ lb; Green do, 50@75c ₱ box; Green Peas, 3½@4c ₱ lb; Tomatoes, 50@90c ₱ box; String Beans, 3½@ 4c ₱ lb; Artichokes, 10@15c ₱ doz; Summer Squash, 40@50c ₱ box; Green corn, 8@15c ₱ doz; Green Okra, $1 25 p r box; Egg Plant, 50@75c ₱ box; Lima Beans, 4½@5c ₱ lb; Beets, $1 ₱ ctl; Parsnips $1 ₱ ctl; Marrow Fat Squash, $8@10 ₱ ton. Cucumbers 75c@$1 00 per box.

FRUITS—
Imports, 2 cs fruit, 2 cs apples, 666 box limes, 86 box 8 crte oranges, 1 crate pineapples. Exports, 8422 box fruit, 1744 box apples.

There is very little doing in Limes now. Strawberries are in very poor request and for many lots prices have to be shaded. Watermelons are about out of the market.
We quote: Domestic Strawberries, $1 00@12 ₱ chest; Apples 40c@$1 25 ₱ box; Pears, 50c@$1 25 per box, Quinces $1 25@1 50, Figs 50c@ 1 00 ₱ box, Plums 5c per lb, Grapes, 40c@65c ₱ box, Watermelons, $4 00@8 00 per hundred, Canteloupe 75c@$1 25 per case; Cape Cod Cranberries, $19 00 per bbl, Western do, $17 00 per bbl.
By special mails, $40 00@41 00 per box for Sicily, and $4 50@5 00 for California. Limes, 50c@7 00 per box for Mexican; Tamarinds, 12c@13c per lb, Bananas, $1 75@3 00 ₱ bunch, California Oranges, $2 25@2 50, Riverside, $2 50

NUTS—
Imports, 21 bags, 102 cs 71 M cocoanuts Exports, 515 bags nuts
We quote: Cocoanuts, $8½@9 ₱ 100. California Walnuts, 8@9c ₱ lb, Chili do, 8½@9c, California Almonds, hard shell, 7@8c, soft shell, 14 @15c, Filberts, 12@12c, Pecan, 12@13c, Peanuts, 7@8c, Brazil Nuts, 12@13c, Hickory Nuts,

HONEY—
Exports, 68 cs
We quote: Extracted, 6½@8½c; Ex White Comb 1sc, White, 15c, Dark, 12½c.

BEESWAX—
Imports,
We quote 28@30 c per lb.

DAIRY PRODUCE—
Imports, 1 bx butter 114 cs 39371 lbs cheese. Exports, 7797 lbs butter, 506 cs 5631 lbs cheese.
The market continues on its downward course though the demand is very good
We quote: Fancy Roll, 42½c, Choice, 37½@40, Fair to Good, 32½@35, interior lots from country stores, 16@17c, Brine, 20@21c for old and 24@27½ for new; Eastern, 15@17c, Pickled Roll, 25@ 27½, Cheese, California, 12@13c for choice, 11@12c for Fair to Good, Giltys, no grms, 13@14c, Eastern, 17@18c, Western, 8@12½c.

OLEOMARGARINE—
We quote the range from 20 to 22c, according to package

EGGS—
Imports, 57 bxs Exports, 4 bxs.
Choice California eggs still continue firm at unchanged rates. Eastern are in large receipt and weak.
We quote: California Eggs, Choice Ranch, 42½ to 45c per doz, Eastern, 30@32½c.

POTATOES—
Exports, 692 ctls
Receipts of week, 37339 sks
All kinds are low and hang fire—sales are hard to make at any figure
We quote Salt Garnets 75c; Early Rose, 40@60c, Reds 40c, San Leandro Peerles, 70c, Tomales, 80c.

ONIONS—
Exports, 383 ctls.
Receipts of week, 4847 sks.
Quality is not so good—market continues firmer at last weeks figures.
We quote the market at 55@60c.

POULTRY—
We quote: Turkeys, Live Gobblers, 17@19c ₱ lb, Turkey Hens, 20@21c; Dres'd ——; Young Rafts, $5 00@6 00, Old Roosters, $4 50@5 50, Hens $6 50@7 00, Broilers, $4 00@5 00, according to size; Ducks, $6 00@7 ₱ doz, Geese, $1 ₱ per pair
HOPS—
Imports, 121 bls Exports 12246 lbs.
Receipts for the week, 1918 bls
Since our last the New York market has declined two cents. There are still some orders being filled on them market that have not been countermanded but no new ones are arriving. There is very little local demand Growers are not inclined to accept lower prices but still hold to the old rates. Market is quoted nominally at 17@17½c, though the latter price is more an asking rate than based on actual transactions

WOOL—
Imports, 161 sks. Exports,
Receipts of week, 4509 lbs.
For Wool market see Wool Department.

HIDES, SKINS, ETC.
Imports, 45 bls 549 bdls 1014 hides, 62 bdls 531 skins 16 bdls tallow. Exports, 1 pkg hides.
Tallow, 7¼@7½—c per lb. Market quiet.
Heavy Salted Steers, over 55 lbs, 10@10½c per lb
Medium Salted Cows and Steers, 50@55 lbs, 8½. Light Salted Cows and Steers, 30@50 lbs, 8c per lb, Salted Kips, 10c per lb. Salted Veal, 12½ per lb Salted Calf, 15c per lb.
Dry Hides, usual selections, 17@——c per lb Dry Kips, do, 17@—c per lb. Dry Calf, do, 17@21c per lb.

Meat Market.

Beef is firm at quotations, with moderate supply. Mutton is abundant and weak at quotations Pork is plentiful, with a free demand for packing purposes Following are rates for whole carcasses from slaughterers to dealers:
BEEF—First quality, 8@8½c; second quality, 7c to 7½c; third quality, 6@6½c ₱ lb.
VEAL Large Calves, 7@8c, small ones, 8½@11c ₱ lb.
MUTTON—Wethers are quotable at 5c and Ewes at 4½@5c ₱ lb, according to quality.
LAMB—Spring is quotable at 6c ₱ lb.
PORK—Live Hogs, 6@6½c for heavy packing and 5¾@6¼c for light hogs, dressed do, 7@7¾ ₱ lb for hard grain hogs.

Customs Duties.

Duties paid at Custom House for week ending Oct 25, 1883. Duties payable in United States gold coin, standard dollars or greenbacks:

Oct 19, Friday	$ 18,200 20
" 20, Saturday	6,578 18
" 22, Monday	12,088 68
" 23, Tuesday	12,638 84
" 24, Wednesday	9,788 11
" 25, Thursday	19,804 80
Total	$ 79,098 81

WHO ARE THE SUGAR PLANTERS?

As the Hawaii Sugar Commission, who recently reported the results of their investigations on this coast and in the Islands, made the extraordinary error of stating that, "with few exceptions, the sugar-producing industry of the Islands is in the hands of German and English citizens or Hawaiians." We republish from the columns of the *Saturday Press*, of Honolulu, the following table of all the sugar plantations on the Islands, their capital and the nationality of their owners. It will be seen that, of plantations worth $15,886,800, the Americans own $10,235,464 and British, German, Danish, Hawaiian and Chinese only own $5,651,336. This statement in the case of incorporations shows the ownership of the stock at the beginning of the present month.

NAME OF PLANTATION.	VALUE	AMERICAN	BRITISH	GERMAN	HAWAIIAN	CHINESE.

SYDNEY—Per Br ship Glenfinert, Oct 17—2158 tons coal.

Among the German industries which have steadily increased since the beginning of the last decade the manufacture of beet sugar takes a foremost rank. In 1870-71 the export of this commodity amounted to no more than the trifling sum of 288,000 cwt.; in 1879-80 it rose to 2,741,260 cwt.; in the subsequent year to 5,726,360, and in 1881-82 to 6,351,640 cwt., the latter quantity being sold for 129,500,000 marks ($32,375,000), while the home consumption came up in 1881-82 to 5,759,620 cwt. Despite this magnificent result, the Berlin stock quotations show only three companies for manufacturing beet sugar, the total capital of which amounts to 10,940,000 marks ($2,735,000), paying last year dividends of 8¼, 9 and 9¼ per cent, respectively.

To any person sending us the names and postoffice address of two new annual subscribers to the MERCHANT, with six dollars, we will send free, by mail, a handsomely-bound copy of "The Wine Press and the Cellar."

Fry's Chocolate, 50c ₱ lb. Cocoa, 45c ₱ lb; Colman's Mustard, 60c ₱ lb.

COAL—
Imports, 5505 tons Pacific Coast, 3383 tons Foreign and Eastern. Exports, 26 tons coal.
The arrivals of Coal this week have not kept pace with the consumption, hence but little is being carried on, delivery being taken from ship's side. As could clearly have been foreseen for the past two months, there is a marked hardening in prices here, and to arrive, and it is very fortunate for consumers, that no combination has been effected among the principal dealers to further advance, which combination could have been readily made. We are promised a supply of coastal 20,000 tons per month (if our entire consumption) within three months from Departure Bay and Nanaimo, it is possible, but very improbable within the time mentioned.
The quotations for English, Australian, and Scotch for loading are firmly maintained, with no likelihood of any decline for months to come.
Importers prices of coal: Foreign and American, to arrive: Australian, $7¼@7½; Liverpool Steam, $7 50 @7-75; West Hartley, $8-00@8-50; Scotch Splint, $7-25; Cardiff Steam, $7 or 7 25; Lump Lehigh, $13-50@14; Egg Lehigh, $13-50@14; Cumberland, bulk $10@10½; spot prices are as follows: Australian, $8 00; Liverpool Steam, $7 50, West Hartley, $9 00, Scotch Splint, $8 50, Cardiff, $7 50, Lehigh Lump, $8 13, Cumberland, bulk, 11 50, Egg Hard, $11 00.

COFFEE—
Imports, 420 bags. Exports, 3856 lbs
The market remains very firm but without any change in prices.
We quote From Guatemala, 15½; Costa Rica, 15c; Good Salvador, 12c, ○ G Java, @20c No 8 mala in the market.

CORDAGE—
Imports, Exports, 14 coils cordage
We now quote as follows Manila, 1¼ inch (7-16 dia) and upward, 17c, do, 12 thread (⅜ dia) 17½c; do, 6 and 9-thread (½ and 5-16 dia), 18c; Manila Bale Rope, 7 and 14 thread, 17c, Manila Cordage, tarred, 2 in (⅝dia) and upward, 17c; do Lathyarn, 17c. Discount on lots of 10,000 lbs, 1c ₱ lb. Sisal Rope, 1¼ (⅜ dia) and upward, 13c; do, 12 thread (¼ dia), 13½c; do 6 and 9-thread (½ and 5-16 dia), 14c. Sisal Bale Rope, 3 and 4-thread, 13c

CORKS—

Eagle duck, kegs, Nos 12 and 13, $14, ½-kegs, $7 50, ¼-kegs, $4 00, Diamond Grain, ½ cans, Nos 1, 2 and 3, $4 75, 1 lb canisters, $1 00. Winchester Metallic Cartridges, rim fire, according to brand on $2 50 to $16 00 ₱ 1000, centra fire, according to brand, from $5 50 to $35 ₱ 1000, U S cartridges $100 ₱ 1000.

HARDWARE—
Imports, 1949 pkgs 1 crld Exports, 234 pkgs

IRON—
Imports, 1137 bdls 151 tons 3176 bars 658 sheets 1150 rds 1343 pkgs 772 bdls 31 pkgs 1372 pcs iron pipe, 319 bdls 244 bars 149 slabs steel. Exports, 7 bdls 389 pkgs iron, 15 pkgs steel.
The market for Pig Iron is very inactive, and to effect sales concessions have to be made, entailing a marked loss on cost of importation. Glengarnock selling here at $25 50 from ship's side this month, cost in the country here $26 50 @27 00 and the same cannot be loaded to day under the latter prices. On a staple article like this, such quotations cannot hold, time will remedy it, as there is very little being now loaded, and within the next four months hence, Eglinton must rule as stocks will then have been materially reduced.
Importers prices of Pig Iron, Foreign and American, to arrive: Shotts No. 1, $27½@—; Glengarnock, $26 50@—; Eglinton, $25 00, Clay, Lane White, $23 50; American, Scotch, Soft, $28 00; but prices are as follows: Glengarnock, $25 50; Eglinton, $24 50; Clay Lane, white, $25@; Shotts No 1, $28 50; American, Soft Eastern, $30. Freights and Charters.

The market for tonnage again shows a serious decline. During the past week, the highest rate paid for a first-class American ship for Liverpool has been 32s 6d but this rate was not obtainable yesterday and it is doubtful if 32s 6d could be obtained. Iron ships within the past two or three days, have been offered at 30s Cork for orders U. K. or Havre, but without takers An offer was made of 30s for U. K., Havre or Antwerp, but declined. Yesterday the American ship St John, was chartered at 32s 6d for Liverpool, 33 6d for Havre or Antwerp and 2s 6d more Cork for orders This is considered to be above market rates, The majority of the American ships are withdrawn, their owners having concluded not to accept less than 32s 6d. It is owing to this fact probably that the St. John was taken, at the figures named.
The engagements of the past week have been: Bark Adolph Obing, 1376 tons, wheat to Liverpool direct; 32s 6d. British bark Opheliaj, 1187 tons, wheat to Cork, f. o. r., per order. German bark Admiral Tegetthoff, 991 tons, wheat to Cork, U. K., or Havre; 35s chartered prior to arrival British bark Lancefield, 901 tons, wheat to Cork, U. K., or Havre, at private rate to remain on joint account. British bark Ship Fairburn 1235 tons, wheat to Cork, U. K., Havre or Antwerp, 35s. British bark Emily L. Todd, 1211 tons, wheat to Cork, f. o. r., per order—Chartered prior to arrival. Barkentine City of Papeete, 370 tons, returns to Tahiti British ship Fatherlidel, 1199 tons, wheat to Liverpool direct; private Ship Sterling, 1063 tons, merchandise to New York on dispatch Line. Schooner Golden Fleece, 121 tons, merchandise to Mexico. British bark Glanlorf, 1084 tons, wheat to Cork, U. K., 40s—charter d prior to arrival. French brig Paloma, 229 tons, returns to Tahiti. Bark Canbarien, 400 tons, returns to Honolulu. Ship South American, 1762 tons, wheat and Merchandise to Liverpool direct. 32s 6d. The new schooner Nassau loads merchandise for Boca Bora.

Finance and Trade.

A new demand for money opened on the 22d in the direction of the City Hall Tax Collector Grady commenced the collection of the City and County real estate taxes on that day, and also the State tax on personal property. It will require about $3,000,000 to satisfy these demands, and this amount will be withdrawn from circulation in the next sixty days. The commercial rate for money is strong at 7 per cent Some of the Savings Banks are asking that figure on city real estate. The Hibernia Bank reports an improved demand for its surplus, which it has been loaning out at 6 per cent Exchange is active. There is also a good demand for fine Silver and Mexican Dollars. Domestic exchange is quoted at 15c premium for sight drafts on New York and 25c for telegrams. Bank bills on London are drawn at 49 11-16d for 60 days; commercial bills on London, 50d; Refined Silver, 133¾@14¼ per cent discount, Mexican Dollars, 89½@90¼c.

RETAILERS' CORNER.

The fall trade is not about over, and only jobbers are preparing for the holiday business. They are laying in stocks of the goods which are in mid-land during the Christmas season, such as cultured mosspeel, canned mince meat, canned plum pudding, etc. The popularity into which these canned goods are coming is startling, many of our robust hosts keep, who have been used to making their own mince meat and plum pudding from childhood, buy the canned articles.

SUGAR.

The local demand for refined continues good, notwithstanding that the New York market is low and pressed. There has been a large trade during the week in sugar, which has been in small supply for some months.

COFFEE.

The local market continues brisk and firm at unchanged figures. Our jobbers have not large stocks, and constantly have to buy. The New York market continues firm and high and high stocks both in and there prevent low prices.

RICE

The local demand for Rice has been rather light during the week, and prices lower. Carolina Rice is coming in rapidly faster than the demand absorbs it, so the mills have been compelled to close down in order to allow the stocks to be reduced.

CANNED GOODS.

Our canneries have about finished the packing for the season. The packing of Tomatoes this season has been very rapid on account of the early rains and the frost. The pack is here put up the exception of Grapes. Peaches are mostly canned, and before the new packing comes in we will be entirely out of the article. Strawberries have been out of canned for some time.

DRIED FRUITS.

Prices are gradually declining, and business is increasing. The volume of business transacted during the last month or two during the past 10 days, is the largest period during this city; the receipts have not been heavy, but the demands of shippers from this market is the particular feature to note. The old stock is dwindling, on the contrary, the majority were from medium lots, but the number of the small packages is increasing.

Trade Failures.

There were 167 failures in the United States reported to *Bradstreet's* during the week ending Oct. 13th, 6 more than the preceding week. If more than two corresponding week of 1882 and 1881 than the same week of 1883. Compared with the previous week the total for the United States had 33, a decrease of 10, New England states 28, an increase of 1, Southern states 22, an increase of 11, western states 48, a short use of 1, Pacific states and territories 21, an increase of 3. Canada and the Provinces 15, a decrease of 3. Among the failures reported were one in Maine, one wholesale clothing, William H. Jenkins & Son, wholesale sash, doors, etc., Edward Russell, lumber, and H. Hall & Co., produce exporters, New York. The Springfield (Mass.) Steam Engine company, and T. F. Parsons, dry goods, New Orleans. In the principal trades they were as follows: Grocers 22, a small decrease; boots and shoes 20, a decrease of 2; grain, flour, etc., 9, a decrease of 2; manufactures, 8 hotels and restaurants 6, machine and produce 5, tobacco and cigars 5, clothing 5, iron, 4, dry goods, confectioners 4, carriages 3, commission 3, books 3, jewelry 3, millinery 2, hats 2, coal 2, and publishing goods 2, carriages 2

Spirit of the New York Markets.

NEW YORK, Oct. 17. — There has been no appreciable change in the general situation and business has been of a very satisfactory character. The threatening appearance of the sale has caused buyers to keep up to about recent purchases, and the result has been to distribute all of a satisfactory nature. The few small failures announced would be due to individual short comings rather than to general causes, and they are therefore not indicative of unsoundness of trade, which has rarely ever been conducted upon so conservative a basis. The bank clearings of most of the leading cities continue to show a large increase over last year, corresponding period last month, and the country at large is looking to the fall sales, and not to the mid-summer months, for the bulk of business. The crop reports from the West are very favorable, and the yield of corn will be about 2,200,000,000 bushels, or 25 per cent. more than last year. The yield of wheat will be 450,000,000 bushels, or 15 per cent. more than last year. Although the yield of cotton will be 6,000,000 bales, or 25 per cent. more than last year, the home consumption will probably be increased in the same proportion, and the amount of business and loss of the crop will be about the same as last year. The yield of corn will be 1,000,000 bushels, or 25 per cent. more than last year, and the yield of wheat will be 450,000,000 bushels, or 15 per cent. more than last year. The yield of cotton will be 6,000,000 bales, or 25 per cent. more than last year. The yield of corn will be 1,000,000 bushels, or 25 per cent. more than last year. The yield of wheat will be 450,000,000 bushels, or 15 per cent. more than last year. The yield of cotton will be 6,000,000 bales, or 25 per cent. more than last year.

Oregon Trade.

PORTLAND, Oct. 19th.—The last calendar week was a fair one for trade. The usual quiet summer quiet, and there has been a good call for merchandise. The quiet feeling is due to temporary causes, and the fall trade promises to be very large. The fall months are ahead. One influence, that is the feeling is the unsatisfactory condition of the money market. The demand for capital to move the crops is very great, and the banks are loaded up with paper. The result is that the banks are not willing to lend money on stocks of goods, and the merchants are compelled to buy from hand to mouth. The fall trade will be a good one, and the merchants are preparing for it. The fall trade will be a good one, and the merchants are preparing for it. The fall trade will be a good one, and the merchants are preparing for it. The fall trade will be a good one, and the merchants are preparing for it.

TOBACCO MARKETS.

SAN FRANCISCO, Oct. 19.—The leaf trade is flat. Transactions in the last week have been few and small during the week.

In manufactured tobacco, the tone continues firm, and the demand fair for the season.

The scarcity of cigar makers continues and manufacturers generally have conceded to the demand of their people for an advance. China factories are paying 50 cents per thousand, and white owned factories $1 more to Chinese makers than a month ago.

Total imports by sea and rail, 102 620 lbs leaf tobacco, 16 to 71,507 lbs manufactured tobacco, 4 cases 14 cs cigarettes. Total exports for sea, 1,028 lbs manufactured tobacco, 80 lbs leaf tobacco, 16 M cigars, 25 M cigarettes

[New York Tobacco Leaf.

NEW YORK, Oct. 13th—*Western Leaf*—The market during the week has been fairly active, and orders, which range from 6¾ to 12½, have been firm at 12½ cents. The week past has also shown a revival in the handling of manufactured hard tobacco, a lively and encouraging trade, with prices of nearly all grades very much advanced in figures, which now seem likely to be fully maintained. Quite a number of new brands of first class manufacturers have lately been offered in the market, which from appearance would indicate merit. They can and must be advanced 2 cents per lb as our trade will pay it.

There seems to be a general movement on the part of smoking and chewing tobacco manufacturers to advance the prices of their goods to correspond with the enlarged and recent crop of North Carolina and other tobaccos used in the manufacture of their goods and the high prices asked for raw leaf in consequence.

[U. S. Tobacco Journal.

NEW YORK, Oct. 13th—The market was on quiet during the week. Except in regular jobbing lots, the manufacture of cigars in this city is at a standstill. The prejudice against the employment of cigarettes in cigar-factories has thrown over 10,000 people into idleness, and though a regulation of the matter is more favorable for an early resumption, under either a favorable or adverse court decision, we will be now but a matter of a short period of time, if affect the market to no small degree

The few out of town buyers that were present in our market have purchased in small parcels only, making in the main selections from the '82 Pennsylvania. They all agree that they found considerable difficulty in securing from this crop suitable lots of really fine native and quality, but, for what they secured they paid high prices. They are loud in its praise The packing of clear lots of '82 Wisconsin with the exception of a few ends of cigar-makers, is of a very inferior quality, but

A. D. BELL, Editor.

FRIDAY OCTOBER 26, 1883

East India tea is dividing the business in Great Britain with the products of China. Year by year the consumption of India tea has increased and that of China has fallen off, until the imports are now about equal. Within the past few months a few consignments of India tea have come to this port. India tea is a full bodied fine flavored natural tea, and makes an excellent beverage when used alone or blended with other t . It has only to become known on this c to be very popular. Those families wh used it once will now take no oth . S. L. Jones & Co., of California street, near Front, have a consignment of it in two or three qualities, which they are offering to the trade at 40 to 45 cents a pound. Family grocers who do their own mixing should try it. One of its peculiarities is its strength, only about half or two-thirds of the quantity used of Japan teas is necessary to make a good pot of tea.

The last Legislature purposely cut down the appropriation for the maintenance of San Quentin prison from $100,000 to $60,000, with the intention of bringing the Directors and Warden into financial trouble. It was not a creditable act, and if it is used against the party who did it, in the next State election, they will be rightly punished. The new Board, thanks to their own friends, find themselves without sufficient funds to maintain the prison until the end of the fiscal year by between $30,000 and $40,000, not because of extravagance on the part of the old Board or Directors or the Warden, but because the Legislature refused to appropriate more than $60,000 for the maintenance of 1,200 prisoners at San Quentin, while allowing $90,000 for the maintenance of 300 at Folsom.

The Eastern National Banks, from the fright they show lest the national debt should be so reduced that there would be no bonds on which to base their circulation, apparently have an idea that the principal and most profitable business for a bank is a note issue. Note issue has not necessarily anything to do with banking. In England there is practically no issue but that of the Bank of England, yet there are institutions that do more commercial banking business, than the old lady of Threadneedle street. San Francisco itself is an example, every sound national bank in the country could continue business without issuing its own notes.

The most experienced wine makers recommend Rixford's Wine Cellar and Press. It is chock full of information, compiled with industry and care from the best French and German writers.

NEILSON'S GOOD NAME.

Wm. M. Neilson, alias McCann, has done the State good service. He has brought an action for libel against ex-Senator Shatton for $120,000 for damages to his good name and fame and credit in his profession of journalist. If Mr. Neilson will prosecute his suit, and Mr. Sharon, in his answer, will deny that Neilson ever had any good name, fame or credit as a journalist, or as a citizen, in the United States, except during the few weeks or months after he arrived in this State, during which it was not generally known that he was the conditionally pardoned Australian convict McCann, the truth will be apt to come out in the trial. Neilson is either a very bold rascal, or a very much maligned man. It will be strange considering the notorious character that Neilson has obtained amongst his fellow journalists and others who have had dealings with him, if Mr. Sharon fails to prove that Neilson has been guilty of any of the practices attributed to him. If Neilson can show that he has invariably earned his living in this country by honest industry, and that in all his intercourse with his fellow citizens his acts have been honorable, the fact that he was convicted and punished for a crime committed years ago, in another country, will not be pressed very strongly against him. But can he? It is one thing to assert innocence, it is a very different matter to come out unscathed from such a scrutiny of his life as he has challenged in his libel suit.

WHEAT NOTES.

Bradstreets' correspondent "Observer," whose letters on the price of wheat, dated September 22d, the Merchant published in full on October 22d, estimated the crop of the United States, for 1883, at 380,000,000 bushels. Since that letter the October report of the Agricultural Bureau on crops has been published, and the estimate the wheat crop at over 400,000,000, with a possibility of it reaching 420,000,000. "Observer," on his smaller estimate, gives the possible export of wheat, or its equivalent in flour, in the harvest year ending June 30, 1884, at 100,000,000 bushels, one third of which he draws from excessive reserves of former years, but if the Agricultural Bureau's estimate of the crop just harvested in the United States, and which was not issued when his letter was written, is correct, we can export from 120,000,000 to 140,000,000 bushels, leaving his estimated reserve to commence 1884-5 with, untouched. In the year 1879-80, Great Britain raised from 3,056,428 acres, 53,487,488 bushels of wheat, and we sold her 183,000,000 bushels. In the year 1883-4, Great Britain is estimated to have raised 70,000,000 bushels from 2,708,000 acres; but instead of 183,000,000 bushels for export, we have, according to "Observer," only 100,000,000 bushels to sell her, or according to the Agricultural Bureau at Washington, 120,000,000, reaching possibly to 140,000,000 bushels. Under any circumstances, therefore, Great Britain's needs being only about 16,000,000 bushels less than in 1879-80, we have by one estimate 43,000,000 bushels and by another 83,000,000 bushels less to spare. In August, 1879, No. 2 red wheat sold in New York at $1 03 per bushel, on January 2d, 1880, at $1 58, and in March for May delivery $1 66.

That there is railroad war in the air.

Paul Shirley, the incoming Warden of San Quentin, is said to have appointed most of his officers, and that John Foley, though not yet appointed, will probably be the Commissary, vice Barry. All the appointees are persons who have had experience in their several offices, and in only one case is there any ground for criticism. Archie McAllister ought not to have been reinstated as Captain of the Yard. Under his previous management, laxity of discipline, favoritism, unnecessary severity and even cruelty prevailed. No man who has not a strong sense of justice—no man, with a vindictive temper, should be placed in absolute authority over 1200 men, even if those men be criminals. Under a formal regime the interior management of San Quentin prison was disgraceful to the State; are there any guarantees that it will be better under Shirley and McAllister, than it was under Johnson and McAllister? We shall be most gladly disappointed if it is. With an easy-going Warden the Captain of the Yard is the actual governor, and from his authority, his orders and his acts, there is practically no appeal.

Prices of Sugar.

As one of the charges against the Hawaiian treaty, was that sugar was dearer in this city since the treaty than before, we have prepared a table of the prices of refined sugar, crushed, in barrels, in the first week of the month of January, April, July and October in each year from 1868 to 1876 inclusive; and also from 1877 to 1883, inclusive. We give the table below. The annual average price in the former period varied from 16 cents in 1869 to 11½ cents in 1873, the mean average of the same year was 13⅓ cents. The lowest average in the second period was in the year 1879, namely 10⅛, and the highest in 1880 when it was 12⅞. The mean average of the seven years since the treaty is 11⅛, or nearly one and one-half cents less than previous to the treaty. The anti-treaty average would have been much higher but for the severe competition in '73 and '74 and part of '75, between the sugar refineries of this city which led the owners of the San Francisco and Pacific refineries after making heavy losses, to abandon the business. We are often told that sugar refining since 1876 has been a monopoly on this coast. If that were true we should have the extraordinary spectacle of a monopoly selling sugar at a lower price than obtained when there was a bitter struggle between the wealthiest capitalists in California on one side and Mr. Spreckels and his partners on the other. During the sugar fight of 1874 for about three months sugar sold at 10⅛c the lowest figure then known. The present refiners, monopolists as they are called, sold sugar during all 1879 at an average of 10⅜ cents.

Table of refinery prices of Crushed Sugar in barrels in the first week of each quarter, from January 1868, to October, 1883:

	BEFORE THE TREATY.				
	Jan.	*April.*	*July.*	*Oct.*	*Average*
1868	11½	11	14⅜	14⅝	14½
1869	17	17½	14⅝	15	16
1870	14	13	11	14½	13⅞
1871	15	13	11½	14½	14⅛
1872	11½	12⅜	12⅛	12⅝	13⅝
1873	12	12¼	11	11	11½
1874	11½	11½	10½	11⅜	11⅜
1875	11½	11	11⅛	12½	11⅝
1876	12	12	12	12¼	12

Mean average of the above nine years, 13 1-6 cts.

	AFTER THE TREATY.				
1877	12¼	13	13½	12¾	13
1878	11½	11½	11⅝	11½	11⅝
1879	10⅛	10½	9¾	10⅜	10⅜
1880	12½	11	11⅝	11⅜	11⅝
1881	12⅝	11¾	13¾	12⅜	12⅝
1882	11½	12¼	12⅝	12¼	12⅝
1883	11⅝	11½	11⅜	11⅝	11½

Mean average of the above seven years, 11⅞ cents
Reduction nearly 1½ cents

That Coffee Boom.

Greeley, Burnham & Co., in their pages of the St. Louis *Grocer*, make a good deal of fun over the N. w York spurt in coffee. We give two specimen items:

Bulls in Fly Time. The "tremendous boom" in coffee is over and has proved a gigantic farce. The high prices were nominally maintained for two days and then the whole thing flattened out ingloriously. It was entirely a crazy mania, confined in speculation and born in "wind." While it lasted our local bulls, wild with excitement, rushed around the streets with their eyes sticking out so that you could hang your hat on them, and shouting that coffee was going to 15 cents, "and don't you forget it." When the wires announced that futures were off seventy points at one fell swoop, the bulls suddenly became so limp that you could have mopped the floor with them. A coffee bull in the dry time of drooping prices is a sad spectacle. It would draw tears from the most heartless to see how a blatant, shouting, live-its-for-fair man will suddenly become as pliable as a dish-rag when he finds the bubble has bursted.

The fellows who worked up the coffee boom can defend themselves from the blame of their little game in the same way that the gal did who had offspring before she had a husband. She said it was such a little baby that she couldn't see any harm. It was such a short-lived and little boom that it could not be *very* wrong.

We not Greeley, Burnham & Co., a little previous in deriding the Coffee boom?—*ed.*

Legislating against Fraud.

Some countries are taking vigorous action against fabrication and adulteration. In the Canton of Vaud, Switzerland, notice is given that sale of spurious wine is prohibited. The Superior Council has directed the following prohibition against selling, under the name of wine, drinkables which are not exclusively the production of the vine:

"The sale of fermented liquors which are not exclusively the production of the grapes, in establishments which sell drinks exclusively by retail and direct to the consumers, are subject to the following regulations: 1. That such declaration must be made previously to the municipality; 2. That the indication of the nature and the exact denomination should be placed in a conspicuous place of the shops selling such article. Every infringement upon these rules will be punished by a fine of from 50 to 500 fr. If the offender knows that the drink sold by him under the name of *wine* is not the exclusive production of the vine, the fine shall be twice the amount of the maximum penalty, and the wares shall be seized and sold under their proper denomination, to the profit of hospitals, if healthy, or destroyed if known to contain any substance injurious to health."

The above is something like our California oleomargerine law, and if "splitting," "gallizing" or "pasteurizing" should ever become common in California, would be a good model for our State to follow.

A fox who had been dug out of his den by a peasant and was about to be knocked on the head, cried out: "Hold on! hold on! you are about to murder an innocent fox." "But here are the feathers of my missing hens." "Yes, I admit the presence of hen's feathers, but deny the killing. Take me before the law. If I am guilty the law will punish me." The peasant relented and the fox was arraigned on a charge of murder. The case seemed clear enough when the prosecution rested, but the opposing counsel arose and remarked: "Your honor, the prosecution has failed to prove that all of this occurred in the county of Posey, and I demand my client's discharge." "I discharge the prisoner," said the Judge, "and I would further warn the prosecution that it further weakened its case by not showing whether hens have feathers or bristles."

This has no reference to Donnelly and Gray's trial.

Chinese gods are always fat.

That we want more home manufactures.

That Los Angeles continues to grow in population and in number of buildings.

That when the Supervisors of San Francisco have nothing else to do they investigate the Industrial School

That Chancellor Hartson is a good collector. He collected $3,390,674 39 in the year ending October 1st.

That there are no materialistic infidels in the Call Boards: they all have faith in "future."

That Superintendent Moulder is unlucky: he cannot find a gentleman acceptable to the School Board ring.

That cigar manufacturers should bear in mind that we have now a trade-mark treaty with Spain, which protects Havana trade marks.

That Brown said to Murphy, "If I were an Irishman I'd go back to the old country." "I'll be hanged if I do," said his friend.

That one of the fellows who knows "it is not loaded" has shot himself, but not until he had snapped the pistol at several persons in spite of their objections.

That the Canton Consul should be removed. He will sign a certificate for any Chinaman, that he is a trader, actor, student or traveler. He must be making a big thing out of his office.

That a greater number and a greater value of buildings have been erected in California, city, suburban and country, during the past twelve months than in any previous year.

That almost all grain shippers are bears with respect to the existing statistical position of stocks of wheat, while many of them are bulls when the world's crop or question of demand and supply throughout the year are discussed.

That English newspapers for sometime have spoken of Gladstone as the grand old man—or more commonly the G. O. M., latterly, however, Gladstone has been called the G. O. F. or the Grand Old Feller—of trees.

That it may not be pleasant reading for those who hail from England, but it is nevertheless a fact that many men from the old country, titled peers, baronets, university dons and literary swells, who visit us prove themselves to be snobs, the very snobbiest of snobs.

That a State Constitution loaded with absurdities, ignorant and corrupt Legislatures, unworthy officers and greedy politicians, cannot prevent the wonderful progress of this State. Wheat thrives, fruit grows and grapes ripen in spite of all obstacles. It is not in the power of human ingenuity to prevent prosperity blessing our people; but it is not because of the obstacles blind, selfish men impose on the State that industry is so well rewarded in California, but because Nature has been lavish in her gifts.

That the British have got a white elephant in Egypt. Conquering Arabi was a dramatic episode, but the condition of the Egyptian peasantry, driven into debt by excessive taxation, resulting from Ismael's extravagance and facilities for borrowing, is worse than that of the Irish small farmer. What can the British do with the millions of Egyptians taxed beyond their capacity for British bondholders, and already hopelessly in debt to merciless native creditors, who exact 40 to 60 per cent. interest per annum? The cholera in many cases was a welcome proceeding in bankruptcy which wiped out all debts and relieved them from the slow torture of gradual starvation.

THE WINE YIELD OF NAPA COUNTY FOR 1883.

Estimated at 2,450,000 Gallons.

Wine making is not done yet, and will not be for three or four weeks; but enough progress has been made to enable a close estimate of the result. Below we give the manufacture of the various cellars for last year, and an estimate of the principle cellars for this year, this estimate covering so large a proportion of the total crop as to indicate nearly enough for all practical purposes the result of the year's work:

CELLER.	1882	1883.
E Korthun	25,000	25,000
C T McEachran	2,200	
J Schram	30,000	
W W Layman	12,000	12,000
F M York	26,300	
F H Rosenbaum	4,500	
J C Weinberger	55,000	50,000
J Laurent	67,000	
Chas Krug	274,000	175,000
G Meredith	6,000

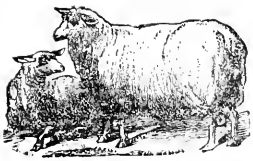
R M Wheeler	57,000	45,000
J H McCord	60,000	60,000
W P Weaks	32,000	
Jann Bros		30,000
G Niehaus	80,000	60,000
C E Smith	1,000	5,000
C J Beerstecher	1,200	
A Brun & Co	100,000	50,000
A Jeanmonod	10,000	
H W Crabb	225,000	150,000
L Debanne	20,000	
G Grossinger	150,000	175,000
T. Grigsby	70,000	
Mrs Haie	6,000	
Frank Salmina	5,000	
Mrs Haie	30,000	
F Borreo	2,000	
C Anduran & Co	240,000	300,000
G Maghiavacca	110,000	100,000
Joseph Folger	5,000	
Joseph Knefel	10,000	
Chas Dell	3,000	
Wm Reed	8,000	
A Grossman	20,000	
James Perry	14,000	
J W Simonton	37,000	
F Marx	800	
A S Roney	1,000	
John Hein	6,500	
Peter Gartman	2,000	
F Kalkenbach	500	
G Crochat & Co	35,000	
G Haug	500	
	2,652,600	

Thus the total of last year, 63 cellars, foots up 2,652,600 gallons. Twenty-six cellars from which estimates have been obtained for this year (exclusive of that of Frank Bros., which was not in existence last year) and they include nearly all the larger ones—make this year 1,675,000 gallons, against 2,054,300 last year. This is 379,300 short, or nearly one-fifth. If the same proportion holds good thorough the whole list—and we know of no reason why it should not—the wine crop of Napa county for this year is about 530,000 gallons short of last year, reducing it to a little over 2,150,000 gallons.—*St. Helena Star.*

That railroad passenger schedules and freight tariffs are gradually being reformed. Soon we will have little to complain of.



SHORT STAPLE

If our sheep men had as good a market for their mutton as the British farmer, they could make more profit than now, and yet sell wool at prices that would defy Australian competition. But mutton sells at low prices in this country, and one-half of what the slaughterer in our large cities give for sheep is eaten up by freights.

We hear that the San Jose woolen mill has shut down temporarily, with the object of reducing stock of manufactured goods. The San Jose mill has from the first been one of the best managed mills in the State.

The woolen mill stock owners should take some active steps toward starting one or more clothing factories in California, and so enlarge the home market for California goods

The Denver *Journal of Commerce* says Coarse sheep, say the flock owners of Colorado, will no longer pay to breed. It is the wool, and not the carcass, that pays in this country: "We are too far away from the mutton market to make sheep shipping profitable," says Captain Maynard, who has had much experience in the business. "The freight eats up the profit on a car load of mutton sheep, so it does on one of coarse wool. None but the finer wools will pay."

This is true probably of Colorado, but not altogether true of California. There are many farmers in this State who are so situated as regards markets, that they could make more money out of a small flock of sheep bred with a view to mutton than by sticking to Merino. If the clip was lighter, the increased price would more than make up the difference. The sheep that pays best for a man who owns 10,000 on a distant mountain range may not be the best for a man who owns 200 and is within twenty miles of two or three small towns and 100 or 150 of San Francisco. If the mutton in this State was better, more of it would be consumed.

Are Our Sheep Improving?

The report of the Department of Agriculture gives the number of sheep for 1861 as 21,500,000 and the production of wool as 55,000,000 pounds. This gives an average fleece of 2.55 pounds. In 1870 there were 34,000,000 of sheep and 135,000,000 pounds of wool. This gives an average fleece of 3.97 pounds, and is a gain of 55 per cent. in ten years. This result does not look like a backward movement in the industry. A gain of 55 per cent in ten years ought to be considered very good progress. There has been no report from the Department as to the production of wool during the period between 1870 and 1880, but there has no doubt been a steady progress during this last decade. Sheep are kept for wool and carcass, and this large increase in the production of wool indicates a corresponding increase in the weight of carcass. We must therefore conclude that our flocks are making satisfactory progress. This progress is largely attributable to the use of purely-bred Merino rams upon the rough, thin-wooled native ewes of Colorado, California and Texas, as well as of the Western States generally. And, with this desire to improve the form of the sheep, has come a clearer perception of the relation of food to growth. The modern sheep farmer, who has studied his business as now well aware that a large finely-formed animal represents generous and judicious feeding.—*National Live Stock Journal.*

U S Commissioner of Agriculture, Loring has called a convention of live stock men to meet in Chicago Nov. 15th and 16th to discuss the following subjects.

1. The extent to which contagious diseases exist among domestic animals in this country.

2. The modes by which they are introduced or disseminated.

3. Methods by which they may be eradicated, or infected districts be isolated.

The efficiency of existing legislation relative to such diseases.

Prof. Clifford Wilson, of the Washington Agricultural Bureau, has analyzed nearly 2,000 specimens of wheat from various parts of this country and Europe. He concludes that the main failing of the native berry is in albuminoids, a most valuable element. Among our wheats the highest percentage of albuminoids was 17 15, while a Russian wheat from Minnesota contained 21.56 per cent., 24 different specimens averaging 19.48 per cent., the lowest having 19.68 per cent. In the east our wheat is the poorest, falling below the general average in albuminoids and ash, and in the size of the grain. A regular improvement is found from east to west until the Pacific coast is reached, where there is a most remarkable falling off in everything but the size of the grain. It is in the country between the Mississippi and the mountains that the best grain is produced. The middle west, represented by Michigan, Kentucky and Tennessee, holds an intermediate position between this district and that on the Atlantic coast. This points to the exhaustion of the plant's food, nitrogen, etc., at the east, with a gradual gradation to richer soils as one goes west, until the the mountains are crossed, when we find a corresponding exhaustion of our longest cultivated wheat fields in California.

That Superintendent Moulder need not have expressed surprise at President Hastings' action. How can Mr. Hastings be "a grown man," when it is well-known he is "one of the boys."

THE WOOL MARKET.

During the past week there have been some 200,000 pounds of fall wool, poor to choice, sold at prices varying from nine to sixteen cents. Also 300,000 pounds of South coast and San Joaquin, Spring, at prices within our quotations. In spite of the dragging business which prevailed for so many weeks the stock of spring on hand has gradually disappeared and is now becoming quite limited

FRENCH WINE EXPORTS.

The [illegible] of wines exported to France [illegible] to the [illegible] of phylloxera. In 1881, [illegible] of the [illegible] of Paris analysed, in 1881, [illegible] samples of wines sold in that city and [illegible] cases of which number only 357 were [illegible] good, 1003 were found tolerably good, [illegible] very poor, but not absolut ly hurtful, and [illegible] 202 samples, so that, according to Frank L. Slis' German Illustrated paper, only 357, or little more than 1 per cent. of the wines in Paris were pure natural wines. This, the Austrian paper says, is an unjust interpretation. For analysis at the police laboratory only those wines are taken which appear suspicious. Hundreds of thousands of samples of wines sold in Paris, which are good, do not go to the sanitary office, and the proportion of spurious and defective wines, the Technical Austrian paper asserts, would appear to be a rather favorable one.

Napa Valley Wine Co.

The Napa Valley Wine Company's meeting, Saturday, was an interesting one. The books showed $425,000 subscription to capital stock, against $358,000 at the meeting before, and it was resolved that only $425,000 more should be offered to the public, giving preference of the other quarter million to the original subscribers.

The Cassandra Adams cleared yesterday for New York, with an assorted cargo of merchandise, including 6,869 sks beans, 504 bales wool and 1,000 flasks quicksil-

---

The Santa Rosa *Republican* says that the Santa Rosa Cannery turned out 10,000 cases, or 240,000 cans of fruit this season of which 20 per cent was corn, 10 per cent peaches, 15 per cent pears, 5 per cent cherries and 20 per cent blackberries. An average of seventy hands were employed for forty days in completing this work, $5,000 being paid out for labor and $12,000 for fruit and vegetables. The proprietor of the cannery says that there was as much fruit this year as last, but that it was not so large.

CALIFORNIA Piano Manufacturing Co.

INCORPORATED UNDER THE LAWS OF CALIFORNIA MARCH 8, 18

Manufacturers of Strictly First Class

UPRIGHT PIANOS.

Factory, 431 and 433 Fourth St., corner of Bryant, old Kimball Carriage Factory.

Salesroom, 30 New Montgomery St., under Palace Hotel.

Our instruments possess the very latest improvements, and in TONE, TOUCH and DURABILITY are absolutely without a superior.

EVERY PIANO IS FULLY WARRANTED FOR 5 YEARS

Our factory is the most complete on the Pacific Coast, possesses every kind of machinery, steam, dry houses, etc., in fact is as complete in all its appointments as any Eastern establishment, producing Pianos of uniform excellence and durability. An examination of our Piano-Fortes is earnestly solicited. Catalogues and full description mailed on application.

JUSTICE BAKING POWDER.

"Fiat JUSTITIA, Ruat Celum."

San Francisco, June 30th, 1883.

We beg to call your attention to our JUSTICE BAKING POWDER, each can of which we guarantee to be full net weight and to contain nothing but the purest Cream of Tartar and the best English Bi-carbonate of Soda, compounded on the most approved formula.

We make the price as low as it is possible to sell this quality of goods, desiring that the purchasers may feel they are getting value received. ALL IN BAKING POWDER, and that they are not involuntary contributors to extravagant newspaper advertising, or to the placarding of fences, as their intelligence must advise them is too often the case when they buy some other brands. At the same time, *Justice* to the manufacturer, *Justice* to the dealer, *Justice* to the consumer, and last, though not least, *Justice* to ourselves compels us to assert in unmistakable terms that, however *Majestic, Far-fetched*, or *Sweetly Perfumed* the title by which any other is known, no purer, more wholesome, more effective, more economical Baking Powder ever was or can be produced, than that we now offer you.

Justice should be found in every city and town throughout the length and breadth of the land, and we solicit your kind co-operation in our efforts to place it there, feeling confident that the closest investigation and the severest ordeal to which Baking Powders can be subjected will prove its intrinsic merit and fully bear out all we claim for it.

With this introduction we are content to place our *Justice* Baking Powder before the public, and referring you to the accompanying memorandum of prices and style of packages at foot,

We are, very respectfully yours,

TABER, HARKER & CO.

MARINE RAILWAY

Built in 1882 for the Hawaiian Government by S. G. WILDER, and opened January 1, 1883. H. J. CRANDALL, Engineer

Has a capacity for taking up a vessel of 1700 tons in Light Ballast

Having leased this property, and placed the same in charge of MR. JAMES LYLE, a Competent Engineer and Master Shipwright, I am prepared to

Haul Up and Repair any Vessels to the Maximum Tonnage

As above. Charges for the use of the Railway 50 cents per registered ton for the first 24 hours, lay days, 20 cents per ton each day.

Repairs as per arrangement

Indian Tea—Its History.

[From the Victoria (Australia) Review.]

The favor with which Indian teas have, during the past few years, been received in the Australian colonies has, perhaps, rendered the matter of sufficient interest for a description in these pages of the manner (as carried out in India) in which the tea bush is planted, and the leaf from it manufactured, for the purpose of yielding

"The cup that cheers, but not inebriates,"

and the writer having spent some years in the management of tea plantations, both in Cachar and Assam (the two districts *par excellence* for tea growing) it may be assumed that he practically understands the subject of which he treats.

It has been stated by very good authority that the average consumption of tea per head of population in the Australian colonies is (within a fraction) three times greater than that of any country in Europe, and, this being the case, it must naturally be a matter of considerable importance to several millions of colonial people to be able to procure the cheapest, as well as the best, tea for their money. That the Indian article meets both these requirements we shall hereafter endeavor to demonstrate.

It must be confessed that, in many cases, a taste for Indian tea has to be acquired before its refreshing qualities are fully appreciated; but once that taste *is* acquired, a thirsty person would as soon think of preferring Van Yean water to a glass of sparkling Moselle, as he would of drinking a brew from the Chinese mixture of mud, twice-boiled leaves, etc., yclept tea, in lieu of a cup of the pure, aromatic Indian beverage. Looking at the disgraceful exposure with regard to so-called Chinese tea that occurred in Melbourne a few months ago, when a whole cargo of the Mongolian rubbish was destroyed, as being utterly unfit for human consumption, it is a matter of no little surprise that anyone can still drink what is termed Chinese tea, more especially the cheaper descriptions of that compound.

It may, perhaps, be as well to briefly explain the rise and progress of tea growing in India as an industry; an industry that is, on the intrinsic merits of the tea it produces, rapidly driving the Chinese article with all its attendant fraud and poisonous mixtures, out of the English market.

The indigenous tea plant of India was discovered some fifty years since, in the vicinity of Tezpore, on the banks of the Bramahpootra River, in Assam, by a Captain Bruce, of the old "John Company's army." After some hesitation, and considerable discussion, on the part of botanists, tea-brokers, etc., in England the samples of teas made from the leaf of the newly-found plant, which had been sent home by Captain Bruce, were pronounced to be genuine tea, and tea of a finer aroma and stronger liquor than any that had, up to that period, reached England from China. English capitalists were soon in the field, for the development of an enterprise, in a country where the cheapest labor in the world was available in abundance, that promised to speedily recoup the capital invested, with the gratifying accompaniment of enormous profits. The Assam Company was the first large concern that was started for growing tea as a commercial speculation in Bengal, and for some years that company met with a series of reverses that led to the names of its directors and shareholders being changed every few years. This arose simply from the fact that the management of factories at that time was placed in the hands of men who were utterly ignorant of the proper mode of cultivating the plant, or of manufacturing its leaf, and not from any mistaken ideas as to the merits of the new industry. Chinese tea-makers were, in course of time, procured from the tea-growing districts of that country, but more especially from those places noted for the best made leaf, and the mode of manipulation, etc., adopted by these men being keenly watched and improved upon by those who had suffered severely in pocket through their former inexperience, a few seasons saw the European manager master of the art of tea-making, and, having the mild Hindoo at his command for the wage of a few shillings *per measem* the former was soon enabled to dispense with the services of the Chinaman, and to rely entirely on the native population for all the labor requirements of a plantation.

The Government of India, on awaking to the fact that the tea plant was indigenous to the sparsely settled districts of its northeastern frontier, committed the sad blunder of trying to hasten the development of a new enterprise by the importation of a large quantity of tea-seed from China, which was duly placed in costly and extensive Government nurseries. In the course of a few years the seed and seedlings from these nurseries were distributed broadcast by the Indian authorities over the tea-growing districts of Bengal, Assam, Cachar and Sylhet—thus laying the foundation for heavy losses by the future proprietors of tea estates. The indigenous plant of Bengal possesses a large velvety kind of leaf, that is more easily made into tea, and yields, acre for acre, quite a third more tea than the Chinese variety, which has a very small, tough leaf, and is a year longer than the Indian shrub in the first yielding of the leaf. Had the authorities waited for the due development of the indigenous plant, many of the sad reverses experienced by the early tea-planters would never have occurred, and they would have been spared the labor and expense, in after years, of uprooting the China bush to replace it with the indigenous plant.

Of course, the eager speculator is sure to surround any enterprise that promises fat dividends, and tea-growing in India was to be no exception to this rule. The estates, tea gardens, and tea plantations became the rage from 1860 to 1864-5 with everyone in India who had money to invest. The history of the mad speculations in "tea" of those days would fill more space than can at present be devoted to it, but it may be stated that, when the smash did come, it was a very severe one, and 1864-5 will never be forgotten by those who burned their fingers through dabbling in tea shares during that eventful period.

Adversity in tea matters, as in everything else in this world, taught those concerned many bitter lessons, and after the big pause above referred to, all engaged in the enterprise had to reconstruct in every possible way. "Bad bargains," in the shape of mere boys, sent from England as full-blown managers, were weeded out, estimates of expenditure were carefully scrutinized; "first" and "second" managers were advised to find more congenial employment, and, in fact, the working of a plantation began to assume the character of a legitimate business, in place of the wild and reckless game of speculation that had characterized previous to 1864.

I may mention here that the tea-plant, in Cachar and Assam, commences to yield when three years old. The out-turn for the first manufacturing season is from 60 lbs. to 80 lbs. of fine tea per acre; the second season it reaches 160 lbs. to 200 lbs. of tea, and goes on increasing till the plants are seven years old, when if the soil is good and the plants have received proper cultivation, the yield is as high as 400 lbs. to 560 lbs. of marketable tea per acre, realizing, in England, an average of two shillings per pound, and the factory cost of producing it at this time should not exceed one-fourth of that sum.

W. Kay.

Bradstreet's on California Manufactures.

California is beginning to wake up to the importance of manufactures for building up a prosperous commonwealth, a new and healthful departure having taken place since the stoppage of Chinese immigration. The California Cotton Mills Company has been incorporated, capital $600,000. A suitable site has been procured at East Oakland, with a frontage to the Bay of San Francisco, giving the advantage of water and railroad facilities. The machinery will be imported from Europe, the difference in cost being against the highly-protected home production, with duty added. Building will soon begin. About 250 white hands will be employed in the mill. Some cotton is grown in the State, but not nearly enough. Texas will be looked upon to supply the bulk of the cotton, and the islands and Mexican cotton will also probably be bought. A strong company has also been incorporated to manufacture steam agricultural machinery. Why this has been so long delayed is unaccountable, the great alluvial valleys of California being the natural field for the application of steam cultivation. An English syndicate is likewise at work to acquire a site for graving docks in the Bay of San Francisco, on the city side. The dock charges are so oppressive at present, and the accommodation is so bad, that shipping frequenting the port of San Francisco is placed at a great disadvantage. The bulk of the tonnage being British, naturally causes English shipowners to take special interest in this matter, and the probability is that they will succeed in their purpose. The erection of suitable graving docks at San Francisco will be hailed with satisfaction also by New York and Boston shipowners.

A Grocer, who has lately joined the militia, practising in his shop. "Right, left, right, left. Form paces to the rear, march!" falls down trap-door into the cellar. Grocer's wife, anxiously. "Oh, Jim, are you hurt?" Grocer, savagely, but with dignity. "Go away, woman; what do you know about war?"

BAKING POWDER

Perfectly Pure.

THE WINEPRESS AND THE CELLAR,

BY

R. H. RIXFORD,

A work of which we can say nothing in another column.

The Italian tea-trading house Cirio & Co are going to erect stations or large warehouses at certain wine-centers of Italy, one of them on a very large scale at Milan, where that house will treat their wines for export in a uniform way, thus being able to deliver large quantities of certain qualities of wines. The plan is an excellent one, and will facilitate the export for France, which popularity of quality is a great advantage for those wines of which commerce in that country has need. Export of wines from Italy, chiefly for Germany and Switzerland, has taken a great stride since the new railroad over the St. Gothard has been opened. France of course is the principal customer for Italian wines. From the 1st of January to last August 17,000,000 of gallons of wine were exported from Italy, more than double the quantity shipped in the same period last year. The output of the Italian vintage this year is a good average one, and the 1883 wines will be quite sufficient for as lively a campaign as either of the last two years have been.

Professor Hilgard is always on the lookout for opportunities of serving this State in other ways than merely discharging his duties to his class at the University, and we learn that he wrote last week to a correspondent at Milan for some twenty-five varieties of olive trees—three sets of each one set for the University, one for Innes & Ill, and one for our friend Prof. Eisen, of Fresno. Mr. Pohndorff, through the instrumentality of his relatives in that country, has two young nurseries in Spain, specially planted for him and at his expense, with the object of transporting the young trees to this State when ready for transplanting.

PERSONAL. The friends of Frederick Pohndorff, Esq. of St. Helena, are entitled to congratulate him on the marriage of his daughter, Señorita Emilia Pohndorff, in Madrid a few weeks ago, to one of the best of the young aristocracy of Spain, in the person of Count Manuel Quintel Perpinian. The young Countess has been brought up in Madrid, where Señora Pohndorff has resided for years and moved in the highest circles

OLIVE-GROWING IN SPAIN.

[WRITTEN FOR THE MERCHANT OF MAY 15TH, AND REPRODUCED BY REQUEST.]

Scientists of France and Spain have systematized the necessary requirements of the two precious plants, the vine and the olive tree, classifying the regions of both countries and observing the varieties of both plants which find congenial elements in those regions be they component parts of soil, chemical ingredients to be drawn from the air, or degrees of heat obtainable during the period of active vegetation in the vine and olive tree. With our antiquated and irrational calculation, according to Fahrenheit's thermometrical scale, it is necessary to resort to tables of comparisons and new calculations who never by European men of science the simple scale of Celsius is used, dividing the grades of warmth from 0 as freezing point to that of boiling water as 100 in so many degrees. The scorner the centigrade scale is adopted in the United States the clearer it will be in all matters of meteorology and the applied sciences, there is a case in point. In regions where the proper amount of heat is obtainable for bringing the grape and the olive to maturity, it is an axiom in southern Europe that their prosperity is secured, except where causes, the explanation of which belong to the botanical geographer, hinder it. Thus the amount of the degrees of heat in the aggregate during the growing season necessary to ripen the grape is 2700 degrees, while the average Andalusian olive requires 3378 degrees centigrade. It ter said, from the time of the blossoms of the olive tree making their appearance, which is at the period when the medium temperature is 19 deg., up to the season previous to frosts, 3978 deg. of heat must have been absorbed by the olives of the trees of the warmer zones to be able to ripen. An instance of this will make this rule clear. Seville, in which district the buds appear early in May, has an average heat of

23.8 deg.	.	during 31 days in May
24.1 deg		during 30 days in June
29.2 deg	. . .	during 31 days in July
30.1 deg		during 31 days in Aug.
29.3 deg	.	during 30 days in Sept.
27.3 deg		during 30 days in Oct.
163.8 deg.		183 days.

The sum of heat degrees divided by the number of months giving 27.3 as mean temperature for 183 days, produce 4974 deg. of heat. The olive is ripe there early in October.

On the other hand, Valladolid, where the blossoms of olives appear in June, has a mean temperature of

19 deg		in 15 days of June
26.3 deg	.	in 31 days of July
24 deg		in 31 days of Aug.
20.6 deg		in 30 days of Sept.
8.5 deg	. . .	in 31 days of Oct.
98.4 deg.		138 days.

The temperature in November is 4 deg. below zero.

Two thousand six hundred and eight degrees of heat cannot grow olives to maturity, 1370 deg. more being wanted for the southern olive varieties to ripen. Zaragoza, with an aggregate of 3261 deg. of heat, cannot mature the Cornezuba olive varieties of the south, but that heat is abundant for the Lingette olives, which are grown in the northern regions of Spain and prosper. The crops from the Empeltre olive trees are great, and the tree has for the last 200 years never suffered from frosts, snow and ice on the slopes of the Pyrenees (where that amount of heat in the hot season is supplied by the sun), being on the ground, and are harmless in winter to that hardy class and other olive varieties. In Aragon, Navarra, Castilla, Salmanaca, even Barcelona, although near the Mediterranean, from the above cause the olive ripens in November and December, and the cause of this is apparent. There are, however, late varieties in the warmer regions of Spain, and the climate alone is not responsible for this feature. We find the following Spanish varieties bring their fruit early to maturity.

1. Olivo Manzanillo, in France called Ampouillean (*Olea Europea Pumiformis*). Requires good soil, and irrigation in dry lands; is a fine bearer, and has a large, round fruit; grows in all warm parts of the olive regions of Spain, in Provence and Langue doc.

2. Olivo Gordal (*Sevillano*), in France called L'Espanole and Pruneau de Cetugnac (*Olea Europea Regalis*). Bears the largest fruit known; Seville and Cordova grow it to perfection; requires only 2400 deg. of heat. The fruit is generally packed green for eating.

3. Olivo Bellotudo. Little propagated, and grown chiefly in the Provence of Jaen; will not be a normal bearer without a good supply of phosphoric acid for stimulating and fructifying organs in due season; bears a fine olive.

4. Olivo Redondillo. Grown in Castilla; resists frost, and requires only 3400 deg. of heat.

5. Olivo Lechin, or Picholin (*Olea Europea Oratia*). Grown in Southern Spain and in Valencia—in the latter district known as the Olivo del Cinquillo. In France three varieties of the tree are known; is originally from Lucca, Italy; able to resist 14 deg. below zero centigr. in cold regions, but on the coast may be killed by 8 deg. centigr. This tree requires more care than any other olive tree; its fruit is of excellent taste, but not of large size.

6. Olivo Nevadillo Blanco, or Olivo Lucio (*Olea Precox*). Grown in Southern Spain in fertile calcareous or shiceous soils, and yields a large, oblong fruit, greatly appreciated.

7. Olivo Varal Blanco, and in France named Blanquette, yields a fine, middle-sized fruit, but does not bear every year. It is cultivated in Andalusia and in France near Toulon.

8. Olivo Empeltre. A vigorous tree of large bearing power, yielding excellent large fruit, rich in oil, and is very abundantly cultivated in the cooler districts of Spain for its resistance to cold. Requires moisture and yields regularly; should not be pruned, its twigs growing slowly.

9. Olivo Racimal, in France called Bouteillan and Rapuguette. Grown in Andalusia, and resists frosts when transplanted northward.

10. Olivo Varal Negro, in France called Cayon. Very good for oil. Requires pruning.

11. Olivo Colchondo. Requires only 3500 deg. of heat, and yields a large, round olive; little propagated, because it bears only once in two years.

12. Ojo de Liebre. Likewise little planted, not being an annual bearer, although its fruit is large, of good taste, and yields oil abundantly.

13. Olivo Carrasqueño, in France called Redonan de Cotignat. Yields beautiful olives, but they are liable to fall when stung by insects or bitten by worms.

14. Olivo Gordal (*Olea Europea Hispalensis*). Yields a very large fruit, different from the Gordal Sevillano in shape, and also in the form of the kernel. It is one of the best varieties for pickling, and also for oils. Requires good soil and attention.

15. Olivo Verdejo, or Verdal, in France called Verdale and Verdan (*Olea viridula*). Requires good soil; yields large fruit; is an abundant bearer and resists frost. Extensively grown in Rioja, Madrid and Catalunia. Late variieties.

16. Olivo Madrileño, or Moreal (*Olea europ. Mariana*). Yields very large olives, not rich in oil.

2. Olivo Cornicabra, in France called Cormand, Courgnale, Cayon and Plant d'Entrecasteaux (*Olivo cur; Rostrata*). One of the tallest olive trees, the fruit of which, long and large, yields oil plentifully. Where not enough heat is given, the fruit does not ripen.

3. Olivo Cornzudo. Similar to the Cornicabra in shape, but its fruit is smaller than the latter, and its leaves broader. Probably this tree requires more heat than any other. It grows all over Spain, and can resist dronths.

4 Olivo Javalano. Produces large oblong fruit, which is liable to be attacked by insects.

5. Olivo Picudo, or Tetudilla, also productive of a fine, large oil olive, growing in Andalusia and Cataluña.

6. Nevadillo Negro. Prosperous in Southern Spain, and yielding large, fine olives.

7. The Sweet Olive of Aragon.

This list may suffice for the present. Of many of these varieties there are diversities. From the above remarks some practical conclusions may be drawn for California. If the generality of the kinds that have been acclimated in the State are late maturers, it does not necessarily follow that we have not the heat requisite to ripen early varieties early. Quite the contrary: there are many localities, whole regions, where the amount of heat would be over-sufficient for the most exigent varieties of Andalusian growth. The subject requires experiment and study in different localities. I shall say something in the near future about positions, elevation and soil, gleaning the information from a very practical man, Don José Hidalga Tablada, in Madrid, and the application of whose experiences in Spain may be left to the intelligent grower here. F. P.

ST. HELENA WINEGROWERS.

A New Seedling Grape.

At the meeting of the St. Helena winegrowers on Saturday the first of last week was a leading topic of consideration.

Mr. Lewelling said it was a "killing" not a "rising" frost. It came from extreme coldness in the atmosphere, not from the ground.

Mr. Ewer said he had been down the valley between here and Rutherford and had noticed the action of the frost on different vineyards. In Dr. Crane's vineyard, next to E. Heymann's, the leaves of the vines were badly curled up, as were those in the Doctor's vineyard next to his house. Lewelling's vineyard also showed the effects of frost. He had noticed none elsewhere in the vicinity, though many of the vineyards were situated on low ground, generally subject to frost. He had frost in his vineyard back of his house, on high ground. On W. Healy's vineyard the frost had blighted the leaves to within two-thirds of the distance to the house. On Mr. Scrimgeour's place only an acre or so was noticed as being damaged.

The vintage was reported by some as nearly finished. Mr. Krug and others had some second crop Zinfandels and some first crop Missions yet to crush, but expect to finish soon.

LEWELLING'S NEW VINE.

Mr. Lewelling presented for examination by the club a new variety of white grape, a seedling raised by himself, which much resembled the Seedless Sultana or Golden Chasselas in appearance. It was from a vine five years of age. Fruit was taken from the vine within the year of planting. At four years of age the vine was as full of grapes as was possible, and it had borne in increasing amounts each year from the first. Mr. Lewelling said it was a most remarkable bearer; he had seen nothing like it.

An examination resulted in the following description:

Very great bearing power, bunches large and loose, and branching, not shouldered; skin thin; berries medium size, very juicy, acid not prominent; wood, canes close jointed, good grower; leaves, deep lobed and serrated; ripens from October 10th to 20th.

On motion of Mr. Pellet, it was named by the club "Lewelling's Prolific." It was decided to send several bunches of the grapes, with a full description of it to Prof. Hilgard.

Mr. Pellet presented some samples of wine of this year's vintage of the Grosser Blauer and Carignan varieties. The former is of a fine, full-flavored character, very pleasant to the taste, with plenty of tannin, and on account of its intense color, of great value for purposes of blending. The Carignan is dark, of fine flavor, and of great value as a fine table claret.

Adjourned.—*St. Helena Times.*

Every one who buys California wine by the barrel, whether for retailing or home use, should send to the Merchant Publishing Company for a copy of Rixford's WINE PRESS AND CELLAR. The only California book on the management of our wines. Price $1.50, free by mail.

THE WINE MARKET.

[For Exports and Imports, see Merchandise Market.]

From the accounts which come from Napa of reduced production, we were compelled last week to reduce our estimate of the State's production of wine this year by one million gallons. We now learn that Sonoma county has fallen off probably half a million gallons. The southern district, Los Angeles and contiguous counties, will make less wine, though opinions vary on the total. From the best information we can gather, we have formed the opinion that the crop will be less than 9,000,000 gallons and probably not very much over 8,000,000, the smallest crop we have had for five years.

Thus if we have a full crop in 1884, which should, counting the new vineyards, be 15,000,000 to 16,000,000 gallons, it will find us actually without wine in dealer's hands. The city of San Francisco alone can consume one-half the wine we have made this year. So much for drought and red-hot northers.

California brandies continue in demand at prices within the range of our quotations.

Address B. C. F., at this office.

"THE WINE PRESS AND THE CELLAR."

A MANUAL FOR THE WINE MAKER AND THE CELLARMAN

A Few Press Notices.

[PACIFIC RURAL PRESS.]

"Mr. Rixford has made a very careful study and comparison of all means and methods described in the many good French works on wine-making, and has prepared a book which is a model of concise statement, very comprehensive in its scope, and still so skillfully condensed that the book is compact and concentrated, which is the secret of success in a manual. Mr. Rixford's book will supply a lack which the recent extension of the grape interest has made very great and will do much service in the advancement of the industry in this State."

Letter to the author from E. J. Wickson, Esq., editor of the *Pacific Rural Press* and Secretary of the State Horticultural Society:

"CALIFORNIA STATE HORTICULTURAL SOCIETY,
Secretary's Office.
SAN FRANCISCO, September 29, 1883.

E. H. RIXFORD, Esq.—*Dear Sir.* I have been much interested in a careful perusal of your manual, "The Wine Press and the Cellar," and am pleased to announce that I find it exceedingly valuable as a source of information on practical wine-making. It seems to me a model of explicit statement and intelligent condensation. Certainly there is nothing in the English language which can be at all compared with it as a guide to the most correct and successful practice with the juice of the grape, from the vat to the bottle. The publication will be of invaluable benefit to the wine interest of the State.

Very truly yours,
E. J. WICKSON, Secretary.

Orders should be sent to me before the end of December, so that the delivery of the presses may be made before the next crop.

Circulars Sent free of Charge on Demand Application.

PRODUCE MARKET.

[illegible] Imports and Exports given below are up to Wednesday evening.

[illegible] the sales, the sales at sessions [illegible] Exchange Call Board [illegible] aggregated 111,300 [illegible] Wheat, 36,000 Barley, [illegible] 100. Total value, [illegible] of the Call on [illegible] 18 2 the transactions in futures [illegible] 2 1 [illegible] tons grain, etc., and [illegible] the total value [illegible] 101,089 57.

[illegible] rapid's increase [illegible] are largely interested, and [illegible] daily increased. At the outset [illegible] the result of introducing this [illegible] cereals would result in [illegible] participants in the game, and that [illegible] are not so plethoric [illegible] fact, but where few have been large [illegible] have made turns which have been en[illegible].

FLOUR.
Imports, 201 bbls. Exports, 12070 bbls.
[illegible] of week, 190181 qr sks.
[illegible] no change to note in quotations. The export [illegible] active, and one full and one [illegible] been dispatched to Europe during the past week.
[illegible] $5 37½@5 50; Superfine, $4 00@4 50. Country ditto, $3 65@4 00. Interior Extras $4 90@5 00 per bbl for jobbing parcels.

WHEAT.
Imports, 7929 sks. Exports, 22719 ctls.
Receipts for the week, 165582 ctls.
The bulls have shown more disposition to traffic on call, and the trade in options has been greater during the past month than in any preceding month since the organization of the Call system. Such have been [illegible] that prices on Call are from 1@2½c per cental higher than can be obtained in the sample market. The result is that shippers and millers find difficulty in obtaining desirable parcels at figures which will enable them to reap a profit for their purchases.
The Eastern markets have shown a stronger tendency during the week, but English and Continental markets show no improvement. The local speculative market has shown considerable fluctuations, but the general tendency has been toward higher figures.
In the sample market No. 1 White is quotable at $1 70@1 71¼; No. 2, $1 65@1 67½; Extra Choice, $1 72½@1 73¾. On Call yesterday sales of No. 1 White were made at $1 76½, seller December, and $1 86¼, buyer the season.

BARLEY.
Exports, 7991 ctls.
Receipts of week, 55019 ctls.
The receipts since July 1st exceed the deliveries for the corresponding period in 1882 by about 300,000 ctls, and stocks in city warehouses are much larger than usual for the time of the year. It is well known that consignments on the way, or about to be shipped from Southern Coast ports, are large, and the wonder is that present prices are so well sustained. We quote Feed, by sample, at 97½c@$1 05 for Dark Coast to Choice Bay; Brewing, $1 07½@1 15; Chevalier, $1 25@1 50 for Fair to Choice Bay. On Call yesterday sales of No. 1 Feed, in 100 ton lots, were made as follows: Seller the season, 100, $1 03¾; 100, $1 03½; 300, $1 03½; 100, $1 03¾; buyer the season, 200, $1 16½; 300, $1 16¼; 200, $1 16¼; seller 1883, 200, $1 05¼; buyer 1883, $1 09¼.

OATS.
Imports, . Exports, 160 ctls.
Receipts of week, 6302 ctls.
Arrivals are moderate and market steady. Black, $1 35@1 45; White, $1 40@1 75 per ctl for fair to strictly choice. The steamer Mexico, from Puget Sound ports, brought only 3400 ctls, a quantity much less than was expected. Consignments thence will, it is anticipated, be largely increased before the close of the current month.

CORN.—
Imports, . Exports, 64 ctls.
Receipts, 1366 sks.
Only petty parcels of California come to hand, and market wants are mostly supplied by consignments from Nebraska.

BUCKWHEAT.
Receipts of the week, 385 sks.
The demand is active, receipts light, and market firm at $2 50@3 00 per ctl.

RYE.—
Receipts of week, 7274 ctls.
Receipts are increased and market dull and weak at $1 25@1 30.

MILLSTUFFS.
Imports, 200 ctls millstuffs. Exports, 609 ctls bran, 105 ctls millstuffs.
Receipts of week, 5930 sks Bran, 1115 sks Middlings, 1792 ctls Ground Barley.
We quote Ground Barley, $24@25 per ton. Middlings are selling at $17 50@$20 per ton; Wheat Bran, $15@15 50 per ton; Oil Cake Meal $32 50; Feed Corn Meal, $35@36; Cracked Corn, $36 per ton.

HAY.—
Exports, 28 tons.
Receipts of the week, 1262 tns.
With lessened receipts the market is stronger.
We quote Alfalfa, $7@$9; Wheat, $13@$15; Stable, $12 00@14 00; Wild Oat, $12 50@$15; Cow, $9@11; Barley, $10@12 per ton.

STRAW.
Receipts of week, 166 tons.
Quotable at 55@65c ₩ bale, as to condition.

SEEDS.
Imports, 6627 sks 29 cs. Exports, 883 bgs.
Receipts of week, 257 sks mustard, 63 sks flax, 183 sks alfalfa, 61 sks canary.
Flax quotable at $2 75@3 00 ₩ ctl; Canary, 5¾@6c; Alfalfa, 12@13c ₩ lb; Timothy, 8@9c for [illegible] [illegible] $8 50@9 00; Imported Mustard, choice Brown, $2 [illegible] 3 00 ₩ ctl; White, [illegible] 2 50; Hemp, 5@5½c; Rape, 1½@2½c.

BEANS.
Imports, 16 sks. Exports 6896 ctls.
Receipts of the week, 19131 sks.
Our quotations are, for round lots from the wharf: Small White and Pea, $3 12½; Bayos, $3 30; Pinks, $3¼; Reds, none in market; Butters, $3⅛; Limas, $3 40.
Whites are all the rage, and we think with good cause, for our crop this year is not heavy, and it would appear that we are supplying the whole United States with them, at any rate, without calculating on the scarcity of this variety East, the increased railroad facilities have opened up a larger scope of country for our Bean trade on which we can safely depend, not only for this year, but for the future, because it is certain that we can successfully compete with Eastern Beans in localities where our freight rates are the same. We predict still higher prices for Small Whites and Pea. Colored are neglected. Bayos hold their own pretty well, still they don't go off readily. Pinks are decidedly weak and lower. The quality of this year's crop is better than for several years. There is no Eastern demand for colored Beans. Limas are "laid off," although there has been a pretty vigorous inquiry for the past few days, yet buyers are not willing to take them at quotations.
We are glad to note that this trade has lately fallen into able hands; we do not hear the same complaints that have been so prevalent other seasons in regard to "queer" doings in sampling, etc., and dealers will find that the old narrow minded method will not work nowadays. That some parties have made money by it we do not dispute, but that was when there was but little or no competition. We look upon the Bean trade as one of the important industries of our State, and that is the reason we have devoted so much time and space to it. We are glad, therefore, to be able to mention any improvement in the morals or personnel of those connected with it.

VEGETABLES.—
Tomatoes are in excessive supply, and buyers name their own prices. Summer Squash, Green Okra and Egg Plant are out of the market.
We quote: Carrots, 35@37½c; Turnips, 75c@$1 00; Cauliflower, 60@75c ₩ doz; Cabbage, 60@75c ₩ ctl; Garlic, 1½@2½c ₩ lb; Celery, 50c ₩ doz; Dried Okra, 20@25c ₩ lb; Dried Peppers, 10@10½c ₩ lb; Green [illegible], 50@75c ₩ box; Green Peas, 5c@[illegible] ₩ lb; Tomatoes, 20@50c ₩ box; String Beans, 5@[illegible]c ₩ lb; Artichokes, 10@15c ₩ doz; Green Corn, 8@15c ₩ doz; Lima Beans, 5@5½c ₩ lb; Beets, $1 ₩ ctl; Parsnips $1 ₩ ctl; Marrow Fat Squash, $8@10 ₩ ton; Cucumbers, 75c@1 00 per box.

FRUITS—
Imports, 645 cs 350 bbls fruit. Exports, 49 bxs fruit, 110 bxs apples.
The market is becoming very meagre as to varieties. This week Figs, Plums and California Lemons have disappeared. Grapes are very plentiful and sell at a wide range of prices. Strawberries are of very poor quality.
We quote: Domestic Strawberries, $8@10 ₩ chest; Apples 40@$1 50 ₩ box; Pears, 50c@$1 25 per box; Quinces $1 25@1 50; Grapes, 40c@$1 00 ₩ box; Cantelope, 75c@$1 25 per case; Cape Cod Cranberries, $19 00 per bbl; Western do, $17 00 per bbl.
Tropical—Lemons, $10 00@11 00 per box for Sicily; Limes, $5@7 00 per box for Mexican; Tamarinds, 12@13c per lb; Bananas, $1 75@3 00 ₩ bunch; California Oranges, $2 25@2 50.

NUTS—
Imports, 25 bags.
We quote: Cocoanuts, $8@9 ₩ 100; California Walnuts, 8@9c ₩ lb; Chili do, 8@9c; California Almonds, hard shell, 7@9c; soft shell, 14@15c; Filberts, 14@15c; Pecan, 12@13c; Peanuts, 7@8c; Brazil Nuts, 12@13c; Hickory Nuts, [illegible]

HONEY—
Exports, 2cs.
The demand for Honey is very light at present, while receipts are free. The Eastern demand is nominal.
We quote: Extracted, 6½@7½c; Ex White Comb 18c; White, 15c; Dark, 12½c.

BEESWAX.
Imports, .
We quote 28@30 c per lb.

DAIRY PRODUCE—
Imports, 13100 lbs butter, 15821 lbs cheese. Exports, 1127 lbs butter, 167 lbs cheese.
Butter is coming in now more plentifully and prices are lower.
We quote: Point Reyes, 37½@40; Choice, 35@37½; Fair to Good, 22½@30; interior lots from country stores, 16@17c; firkin, 20@21c for old and 24@27½ for new; Eastern, 15@17c; Pickled Roll, 25@27½; Cheese, California, 15@16c for choice; 11@12½c for Fair to Good; Gilroy, in drums, 15@17c; Eastern, 17@18c; Western, 8@12½c.

OLEOMARGARINE—
We quote the range from 20 to 22c, according to package.

EGGS.
Imports, 535 bxs 49 bbls. Exports, 2 bxs.
The market is overstocked with Eastern Eggs, which are very weak at quotations.
We quote: California Eggs, Choice Ranch, 12½ to 15c per doz; Eastern, 25@27½c.

POTATOES.
Exports, 102 ctls.
Receipts of week, 25395 sks.
All kinds are low and hang fire; sales are hard to make at any figure. River Potatoes were a glut last week, but wharves having been cleaned up, there is some price for them to-day.
We quote Chili Garnets 75c, Early Rose, 40@50c; Reds 40c; River Reds, 15c; Tomales, 90c.

ONIONS.
Exports, 91 ctls.
Receipts of week, 3190 sks.
Quality is not so good; market continues firmer at last week's figures. Good quality scarce, and fetch top figures readily.
We quote the market at 60@65c.

POULTRY—
We quote: Turkeys, Live Gobblers, 18@22c ₩ lb; Turkey Hens, 18@21c; Dres'd ———; Young Rstrs, $5 50@7 50; Old Roosters, $6 00@6 50; Hens, $6 00@8 00; Broilers, $4 00@5 00, according to size; Ducks, $7 00@8 50 ₩ doz; Geese, $2 00@2 50 per pair.

GAME.—Arrivals are moderately free, but there is a fair demand, and prices remain steady. English Snipe only are cheaper. We quote: Venison, 5@7c ₩ lb; Quail, $1@$1 25 ₩ dozen; Hare, $2 25@$2 50; Rabbits, small, $1@$1 25; cotton tail, $1 25@$1 50 ₩ doz; Teal, $1 50 to $1 75; Sprigs, $2 25@$2 50; Widgeon, $1 25@1 50; Mallards, $4@4 50 ₩ doz; common snipe, 50@75c ₩ doz; do, English, $1 50@$1 75 ₩ doz; Grey Geese, $2 25@2 50 per doz.

HOPS.
Imports, 187 bls. Exports, 30 bls.
Receipts for the week, 1567 bls.
Since our last the market has been very firm. There is a good Eastern demand for strictly choice lots, but the local demand is light, and common grades are hard to sell. We quote the market to-day at 15@19c as to quality, the outside figure being for strictly choice lots. There has been considerable business in the New York market on London account.

WOOL.
Imports, 236 sks 21 bls. Exports, 504 bls.
Receipts of week, 3351 bls.
For Wool market see Wool Department.

HIDES, SKINS, ETC.
Imports, 407 bdls 1216 hides, 51 bdls 14526 pkgs 47 bls 500 skins, 21 pkgs tallow.
Tallow, 7¼@7½—c per lb. Market quiet.
Heavy Salted Steers, over 55 lbs, 10@10½c per lb. Medium Salted Cows and Steers, 50@55 lbs, 8½c. Light Salted Cows and Steers, 30@50 lbs, 8c per lb. Salted Kips, 10c per lb. Salted Veal, 12½ per lb. Salted Calf, 15c per lb.
Dry Hides, usual selections, 17c—c per lb. Dry Kips, do, 17@—c per lb. Dry Calf, do, 17@21c per lb.

Meat Market.

Beef is firm at quotations, with moderate supply. Mutton is abundant and weak at quotations. Hogs are firm at our figures and all arrivals are bought freely for local packing. Following are rates for whole carcasses from slaughterers to dealers:
BEEF—First quality, 8@8½c, second quality, 7c to 7½c, third quality, 5@6c ₩ lb.
VEAL—Large Calves, 7@8c; small ones, 8½@11c ₩ lb.
MUTTON.—Wethers are quotable at 5c and Ewes at 4@4½c ₩ lb, according to quality.
LAMB—Spring is quotable at 6c ₩ lb.
PORK—Live Hogs, 5@5¼c for heavy packing and 5@5¼c for light hogs, dressed do, 7@7¾ ₩ lb for hard grain hogs.

Customs Duties.

Duties paid at Custom House for week ending Nov 1, 1883. Duties payable in United States gold coin, standard dollars or greenbacks.

Total	$125,890 68

Planting Olive Yards.

To determine the distance between olive trees about to be planted, the height to which the variety to be planted rises should be considered, taking, however, equally into consideration the height to be allowed to the tree according to the nature of the locality. Calculating the height and the diameter of the variety which are about equal, it will be well to allow double the height as the distance at which the trees should be planted from each other. Thus trees presumed to become 12 feet high should be allowed a distance of 24 feet from each other. This general rule depends in its application or deviation from it on the facts. First, that by reason of the small size of the leaves, the olive tree can not evaporate so much sap as other trees the shade of which and the absorption of whose juice are greater. Second, that the trees mutually shade and warm each other more when more densely planted in the plantation, and thus frosts penetrate less. Third, that the soil dries less, the more it is shaded by the tree, instead of sun and air circulating freely. Fourth, that in the soil the roots seek for the nutritive elements and extend to a distance of 1½ times the diameter of the foliage of the tree. Fifth, that the olive tree with little ventilation and little care in trimming becomes infested with small kermes and other insects. Sixth, that it is useful to keep the olive tree low, as the lower kept ones bear better than the high ones, although their variety may be of the large growing species. Combining these facts, and remembering that in poor soils you cannot grow large trees, the practical man can form his judgment about the distance to be left between one tree and another.—*Hidalgo Tablado.*

"Estacas" for planting olive trees are parts of branches of that tree as thick as a man's arm and 6 to 8 feet long, of new wood without warts or inequalities and of the most vigorous branches. "Garrotes" for multiplication of the olive tree are cut off the tree in pruning. The size of "garrotes" is usually about 2 to 2½ feet in length and 1 to 2 inches in diameter, and must be likewise of clean wood with lustrous bark.—*Hidalgo Tablado.*

THE WHEAT FLEET.

During July, 9 grain vessels cleared of 12,622 register tonnage carrying (including 1602 ctls, valued at $2671, shipped to miscellaneous ports) 385,680 ctls of Wheat valued at $550,234 besides 31,043 bbls of Flour valued at $177,533, which includes 20,109 bbls valued at $121,513 shipped to China and elsewhere.

During August, 21 vessels cleared of 32,830 register tonnage carrying (including 4922 ctls, valued at $8,360, shipped to miscellaneous ports) 956,690 ctls of Wheat valued at $1,661,019, besides 86,614 bbls of Flour valued at $422,558, which includes 15,593 bbls valued at $221,048 shipped to China and elsewhere.

During September, 36 vessels cleared of 53,106 register tonnage carrying (including 1842 ctls, valued at $3,187 shipped to miscellaneous ports) 1,752,317 ctls of wheat valued at $2,790,053, besides 78,050 bbls flour valued at $391,171 which includes 57,153 bbls valued at $275,121 shipped to China and elsewhere.

VESSELS CLEARED SINCE OCTOBER 1st.

SEATTLE—Per ship Syren, Oct 26—1208 tons coal.

BALTIMORE—Per ship Louisiana, Oct 26—1800 tons coal

Freights and Charters.

Some seventy-three disengaged vessels in California ports and fifty or sixty more due within the next four or five weeks, does not look encouraging for owners. Add to this wheat selling freely here every day on the Call Boards at prices far above the parity of the Liverpool market, is it a to wonder that price for tonnage are so low that the memory of the oldest broker hard ly runneth to the time when such figures were quoted. There is however a wide difference between what a shipowner asks if any one needs a vessel and what he must accept if that same shipowner insists on immediate employment. The Call Boards seem to be running this mark t on some scheme of their own without regard to values elsewhere or else with ab normally cheap ships, we would be shipping more wheat. If we cannot ship wheat with vessels at rates rates how are we going to get this wheat to market if vessels should get scarce Time, wheat may gradually rise on Liverpool after January, but so may ships, and if the latter do stiffen, prices must rise in Liverpool very liberally to make ship and cargo show a profit. Shipowners, not only of wood but iron, are t red, they have had enough and are now disposed to stand and many of them to wait for charters at ten shillings higher than lowest quotations. Some thing is bound to happen, the question is what. If wheat does not jump in time to Christmas, there must be a crash here, ships will never be much cheaper. It is already that they will be dearer. Affairs in Peru are becoming settled after three years of disorder. Guano stocks must be short in England and the bed may be opened in a few weeks if the condition of Peru improves. There are no ships in South America looking for this business—the Rio and Montevideo fleets have gone to the East Indies Some weeks be tween this and Christmas we may have orders in this port for 50 ships for the guano trade This is in the winds just as much as it is that wheat will go over 50s in Liverpool.

The market during the week has shown little life and no improvement On the contrary, the 30 ms Estrella iron ship has accepted 37s 6d Cork for or ders The City of Glasgow, a handy vessel, has been chartered on private terms but believed to be between 38s and 38s 6d. The wood ships are all withdrawn from the market to wait for better times.

The charters for the week have been as follows:

Ship St John, 1885 tons, wheat to Cork, U K, Harwich Antwerp, 35s 3d. Liverpool limit, 37s 6d Harwich Antwerp limit, 38s 9d. British ship Invercauld, 1500 tons, wheat to Cork, U K, private to charter 6d. Ship City of Brooklyn, 1700 tons, mdse Honolulu to Seattle. Bark Enoch Talbot, 1150 tons, coal from Nanaimo, to this port. British bark Inchmarnock, 917 tons, now at Wilmington, proceeds to Portland, under charter to load wheat to Cork, U K, at 35s. British ship Mytonen 1, 1900 tons, wheat U K Continent or Antwerp, 37s 6d. British ship Leicester Castle, 2000 tons, wheat to Cork, U K, 40s. Chartered prior to arrival British ship Sierra Estrella, 1436 tons, wheat to Cork, U K, 37s 6d. From Portland, Or., 1692 tons, redwood to U K port, private. Bark Ferris S Thompson, 514 tons, coal from Departure Bay to Kahului Ship John Cumier, 1417 tons, wheat to Liverpool, direct 32s 6d, Havre or Antwerp, direct, 33s 9d, Cork, U K, Havre or Antwerp, 35s 9d. Bark Penobscot, 1067 tons, merchandise to Hongkong, lump sum. Schooner Annie F Briggs, 94 tons, redwood to Apia, British ship City of Adelaide, 1768 tons, wheat to a direct port U K, private

Finance and Trade.

Money is in fair demand Three-quarters of a million of new money has come into the market the week through the importation of that amount of foreign coined and uncoined Gold from Australia and New Zealand. This will all have to go through the Mint before it can circulate in this country. It is thought a considerable portion of this sum will be lodged in San Francisco in the purchase of real estate and the erection of improvements thereon, and also in the purchase of Grain bills Whenever there is any advantage in purchase of Sterling bills on London in this market, Australia will send her surplus Gold here rather than to London The movement at times is quite important. In this respect San Francisco has an advantage over New York, owing to direct steam communication with Sydney and Auckland. Commercial paper is steady at 7@8 per cent, and real estate loans (city property) are also steady at 6@7 per cent Domestic exchange is quoted at 20c premium bid sight drafts on New York and 30c for telegrams Bank bills on London are drawn at 19[illegible]@11 16d for 60 days, commercial bills on London, 60d, Refined Silver, 13¼@14¼ per cent discount. Mexican Dollars, 89@90c.

Politics and Commerce.

Politicians, as a rule, are not engaged in commercial pursuits and do not expect to be. Their ambition is other. What will benefit them is the prominent question, not what will inure to the prosperity of the country. A letter written from this city to the editor of *Bradstreet's* discusses the relations of politicians to commercial subjects very clearly and also very fairly. The letter is remarkable from the fact that the writer, whom we know, though advocating the *laissez faire* principle in reference to the present tariff, is imbued with free trade theories. These, however, do not show in the communication we print below.

EDITOR BRADSTREET'S. Sir—However independent it may be, there is now little doubt that the tariff will become an issue in the next Presidential campaign. This is to be regretted from a variety of reasons, but most of all because of the uncertainty which it creates. It is clearly impossible to conduct any large business enterprise successfully if there is not a reasonable certainty that it will not be met and met with by legislation. For this reason, as has been frequently stated in *Bradstreet's*, a high protective tariff is preferable to an unsettled and shifting one, because business adapts itself to the former and cannot to the latter. But politicians do not regard it in that light. They simply consider the tariff as a subject for popular agitation, and decide above all things else its final vitality. To them, and for their interests, the tariff should be an open question; but the country at large has everything to gain by stability.

In saying this, I by no means admit that the tariff is just what it should be. On the contrary, I think it might be very easily amended to the great and substantial gain of the community at large, but people prefer to put up with its defects, many and glaring though they be, to risking another Congressional wrangle over the schedule, with the absolute certainty of unsettling much and settling nothing. It were better for the country to rest content for a few years until the present tariff has been thoroughly tested than to blindly rush into changes without knowledge or experience. While the campaign of 1888 up to the tariff issue may be taken up with knowledge and propriety, for the reason that the principles will be understood and that the financial condition of the country will then be such as to admit of a large reduction of income without imperiling any branch of the public service.

As I have already said, however, this will hardly be the course which politicians will pursue. The tariff will be the main issue in the campaign of 1888, and the industrial interests of the country will suffer thereby. And this suggests the inquiry, why it happens that the interests of party politics should so diametrically conflict with the best interests of the country. It seems paradoxical to say so, but this is undoubtedly the case. The reason would appear to be that under our system of government, with its frequent elections, a continuous policy is impossible, and therefore party leaders are compelled to lay hold on some salient point upon which to get up a cry of extravagance or retrenchment in lieu of a national policy. The tariff is the only point in our entire system which meets the requirements of the case, and it is seized upon with avidity by the two great national parties, while the Cincinnatuses squat themselves at the door of the Mint with a wisp of paper in their hands clamoring to have it stamped "money."

It we had a land or law reform question to solve, a state church to disclose, or privilege and pumpenature to abolish, the exigencies of party management would not compel a perpetual tariff war. Having none of these social questions to grapple with, living without even a decent industrial grievance, and being too prosperous as a whole to pay much attention to corporate aggression, politicians are without a pretext for disputation outside the tariff. This it happens that our very advantage is arrayed against us by those whose sole purpose it is to acquire office and conduct the administration of public affairs

San Francisco, Oct. 9. C.

Imports, 8000 casks

	Spot.	To arrive
Eastern Rosendale, in round lots	$2 20	2 15
English do do brands, in round lots	3 37½	3 15
English outside brands, in round lots	3 25	3 00

CANNED GOODS, ETC.—

Imports, 2586 cs canned goods, 75 cs canned meats, 2 cs milk, 145 cs olives, 7525 cs sardines. Exports, 111 cs canned goods, 30 cs milk.

The Eastern demand continues good for all kinds of Canned Fruits, and stocks are getting well reduced. Many of the leading packers are out of the most desirable varieties. The last year's packing has been backward about the same time, but owing to the shortage of all kinds of fruit last, the orders have been large.

We quote California assorted Table fruits, 2½ lb cans, $2 65 @ 2 90; do, 2 lb cans, $1 90 @ 2 00; do, 1 lb cans Table fruits, $1 60 @ doz. Pie fruits, $5 00. Tomatoes, 2½ lb cans, $1 20 @ doz, ellies, $2 75. Jams, $2 75 @ doz Pickles in 5 gallon boxes, $14. California Salmon, 1 lb cans, $1 90 @ doz. Ketchup, $1 25@1 75 @ doz. English Groceries Crosse & Blackwell's Pickles, $2 25; qts, $3 75. Olives, qts, $7. Limes, Oil, qts, $5 50. Sauces, $9 00 @ doz. Jams, $4 00. Jellies, $5 00 @ doz; Eve's Chocolate, 50c @ lb. Cocoa, 15c @ lb; Colman's Mustard, 60c @ lb.

COAL

Imports, 97,18 tons Pacific Coast, 1800 tons Foreign and Eastern

Very few changes to note this week, sales have been very light, except local spot business with consumers. The scarcity of coal now affecting the Atlantic Coast ports is unprecedentedly small, almost every car of coast changed hands once at least, and a number of cargoes have been sold in transit; this is attributable to the steady advance of the past sixty days.

Our promised supplies from British Columbia are not yet at hand. A long time has elapsed since Nanaimo has forwarded us any Coal prior to this week, one cargo of this is at hand now, being discharged by the Gaslight Company.

It has now become a fixed fact that there is no hope for any large supply of coal from Australia, as the only source from which cheap Coals can be drawn for several months at least.

Quotations, prices of coal, Foreign and American, to arrive: Australian, 87½@7c; Liverpool Steam, 7 50@ 7 75; West Hartley, $8 00@8 25; Scotch Splint, $7 25@8; Cardiff Steam, $7 50@7 75, Lump Lehigh, $13 50@14 00; Egg Lehigh, $13 50@14, Cumberland, bulk, $13 50@14 00. Spot prices are as follows: Australian, $8 00; Liverpool Steam, $7 50, West Hartley, $9 00, Scotch Splint, $8 50, Cardiff, $7 50, Lehigh Lump, @$13, Cumberland, bulk, $11 00, Egg, Hard, $11 00,

COFFEE—

Imports, 154 bags. Exports, 4762 lbs.

The market continues very firm at slightly higher prices.

We quote Prime Guatemala, 13c@13½c; Costa Rica, 13c@13½c; Good Salvador, 13c; O G Java, 29c.

CORDAGE—

Imports, 76 coils 15 bls. Exports, 2 coils.

We now quote as follows. Manila, 11¾-inch (7-16 dia) and upward, 17c; do, 12-thread (¾ dia) 17@c; do, 6 and 9 thread (¾ and 5/16 dia), 18c; Manila Bale Rope, 2 and 4-thread, 17c; Manila Cordage, tarred, 2in (cable) and upward, 17c; do Lathyarn, 16c. Discount on lots of 10,000 lbs. Jute & Sisal Rope, 11¾-in (7-16 dia) and upward, 13c; do, 12-thread (¾ dia), 13@c; do 6 and 9-thread (¾ and 5/16 dia), 14c. Sisal Bale Rope, 3 and 4-thread, 13c

CORKS—

Imports, 2 bls 5 bgs

DRIED FRUITS

Imports, 24 pkgs dri fruits, 150 bbls cranberries; 1 cs citron, 100 bbls currants; 3 bx figs, 36 cks prunes, 250 bxs raisins. Exports, 3153 lbs dri fruit. 200 bxs raisins.

Stocks are not accumulating in any variety. Peaches have advanced and are held at 13c@13½c. Pitted Plums are very scarce, and in not are out of the market, and are held above supply, and are moving freely. Sun Dried Apples are in fair supply with a good local demand. Evaporated fruits are in fair supply, with a large Eastern demand.

DRUGS AND CHEMICALS—

Imports, 67 cs 1 pkg drugs. Exports, 31 cs drugs.

We quote Carbolic Acid, 15c; Strong Sulphuric Acid 35@36c; Sulphurous Acid, 25c; Muriatic Acid 1½@2c; all lots of 20 carboys or more). Caustic Soda, 60 dry, 5c, 70 dry, 4½@5c, 76 dry, 6½@6½c; Powdered Caustic Soda, 7c. Carbonate Potash, 9@9½c; Chlorate of Potash, 16@17c, Soda Ash, 2@3½c; Soda Crystals, 1½c.

We quote at ship's side: Soda Ash, 1 90@2¼c for 52 4/6 Soda Crystals, 1¼c; Chloride Lime, 2½@ 2¾c; Copperas, 1½c on spot, Caustic Soda, 60 pc cent, 5c

DRY GOODS—

Imports, 108 cs 23 bls Exports, 23 cs

FISH—

Imports, 36 pkgs 1528 0 lbs fish, 1263 cs 191 bbls 3¼ lbf kits salmon Exports, 43½s fish, 525 cs salmon

Columbia River Salmon The Eastern demand has been light during the past week

Sacramento River Salmon What little there is here is held firm.

New Alaska Salmon which was canned this year is a very fine article It has a bright red color, though not so oily as the Columbia fish. The asking price is $1 00@1 10 for 1 lb tins and $2 00@2 05 for 2 lb

We quote Columbia River, $1 20, Sacramento, $1 10, 1 lb; barrels $11 00, bf barrels, $7 50, California Cod, in 50 lb bundles, 6c, selected, in cases, 7c; boneless, 8c.

G. & R. POWDER—

Imports, 800 kgs blasting

California Blasting is quotable at $3 25 ₱ keg, Dupont Blasting, iron kegs, $3, Hazard do do, $3 25; Hazard R R P, in canisters, 50c lb, do do Electra, $1, do American Sport, 75c; Dupont's Sporting Rifle or Pheasant, kegs 1, FF and FFF, $5 50 ₱ kgs, $3 00; ¼ kegs, $1 75, Superior Rifle, kegs, Fc, FFc, FFFc, $7 00, ¼ kgs, $4 75, ¼ kegs, $2 25. Eagle Duck, kegs, Nos 12 and 13, $14, ¼ kegs, $7 50; ¼ kgs, $4 00. Diamond Grain, 5 brands, Nos 1, 2 and 3, $4 75; 1 lb canisters, $1 00 Winchester Match rifle cartridges, rim fire, according to brand on $2 50@3 00; 1000, center fire, according to brand, from $8 50 to $35 lb 1000, U S Cartridges $100 ₱ 1 000

HARDWARE

Imports, 2538 pkgs 18 crlds 9 cs. Exports, 68 pkgs

IRON—

Imports, 236 bdls 1100 tons 1651 bars 247 sheets 338 plates iron, 180 bdls 326 pkgs 635 pcs iron pipe, 146 bdls 2 pcs steel, 1100 steel rails Exports, 191 tns 597 30 pcs 2 cs 8 pkgs iron, 93 bxs steel

There is a complete apathy in this article; sales cannot be forced except at very low figures, as the combination have full stocks for present requirements, and their business is liable to slack off materially in the next four or five months.

Some is being loaded in Europe, so that buyers can make no mistake by purchasing at present figures, which are materially lower than orders can now be taken at

Large sales of old Rails and Scrap Iron have been made this week at full figures.

Importers prices of Pig Iron, Foreign and American, to arrive: Shotts No. 1, $27¼@—;

Summerlee, $26 50@—; Eglinton, $25 00, Clyde Lane White, $23 50; American, Eastern Scale, $28 00; Spot prices are as follows: Glendarroch, $25 75; Eglinton, $25 50; Clyde Lane, white, $25 00; Shotts No 1, $28 50; American, Soft Eastern, $30 Clipper Imp Nos. 1 to 4 $32 50@35 00.

WINES—

Imports, 100 cs 30 gls Foreign. Exports, 109 gals Native.

For remarks see Wine Department.

RETAILERS' CORNER.

Trade during the week has been very good, and as sales of wheat are free at present, collections are coming in well. The opening of the Northern Pacific is having its effect on the trade of this city, and the fight between the railroad companies is raging hot and heavy. The most important change of the week is the decline in sugar.

SUGAR.

On the 30th ult. the first sugar change of the year occurred. The year 1882 closed with sugar at 11⅞c., and it continued so without change until Tuesday afternoon. The decline of one cent a pound was unexpected and caused some inconvenience to our jobbers, but as they had light stocks the fall was not so heavy as if it had come a few weeks earlier, when the fall trade was at its height. Our jobbers and retailers have been fortunate this year in matter of changes, for though no money has been made on advances, none has been lost on reductions, till this week. The New York market is very dull and prices are a little lower. Belcher's Refinery in St. Louis has closed down till December. The market in Chicago is reported active, with stocks larger.

COFFEE.

The demand continues active, both for local and Eastern consumption. There is a slight advance in figures. Stocks are very light and will hardly last till the new crop commences to arrive. The New York market continues to advance, while buyers continue as they have been doing during the whole season, buying only for present requirements. The interior merchants do not seem to be able to appreciate the fact that the present is a genuine advance, while the very fact that the market continues to steadily rise in the face of the cautious movement shows it to be genuine. If there were a wild, excited movement, we might say that the advance was only temporary, but at present it looks to us as if the best thing that dealers could do would be to lay in stocks to receive the benefit of the advance. Cable advices from Rio indicate a strong market there, with an upward tendency, although private cables do not quote high r prices. The receipts have been moderate for this season of the year, but with light purchases for this country and Europe the stock is increasing, amounting at above date to 228,000 bags.

RICE.

There is something very unsatisfactory about the condition of the Asiatic Rice market. Mixed has been going lower and lower and shipments continue to arrive both by steamer and sailing vessels, so that holders cannot help but net a continuous loss on this variety of Rice. Fair No. 1 and 2 China are in fair demand, but low, while Good No. 1 is very scarce, and held at extreme figures. Hawaiian sells freely on Eastern account at 4¼c cash, and for local consumption at an eighth high r The stock is not large. Eastern shipments taking off all surplus stocks, though the mark t cannot advance, as that would shut off the Eastern outlet. In Chicago, the Rice trade has been rather dull during the week, but as the arrivals of rough Rice in New Orleans are falling off, we may expect a better market shortly.

CANNED GOODS.

The Eastern demand all through the season has been very brisk and though larger stocks of many varieties have been packed than last year, yet to-day many of our larger packers are out of the principal stocks. The cause of this large Eastern demand is the general shortage of the Eastern fruit crop. Packers, however, have overreached themselves on the Tomato question, and the market is very weak. There can only be a local demand for these goods, and at present prices they go slowly. In the Eastern States the pack of Tomatoes is very large.

DRIED FRUITS.

Stocks are not accumulating in any variety. Peaches have advanced and are held at 13@13½c. Pitted Plums are very scarce, and, in fact, are out of the market. Apricots are in fair supply, but moving freely. Sun Dried Apples are in fair supply, with a good local demand. Evaporated Fruits are in fair supply, and a large Eastern demand. In Chicago, California peaches, plums and apricots are having an upward tendency, the situation there being influenced by the firm feeling in California. In foreign fruits, the market in Chicago, and especially in New York, is in a very unsettled condition. Raisins have been sold in the latter city for less than cost in many instances. The auction system in invading this line of business, and 12,000 boxes of raisins and 1000 barrels of currants were sold at New York by auction recently, the sale tending to unsettle business for several days previous, and, as a consequence, raisins are weak. Currants share in the feeling with raisins. Prunes are a little firmer.

Trade Failures.

There were 180 failures in the United States reported to *Bradstreet's* during the week ending 26th, 14 more than the preceding week, 30 more than the corresponding week of 1882 and 71 more than the same week of 1881. Compared with the previous week the middle states have 44, an increase of 11, New England states 25, a decrease of 12, southern states 24, a decrease of 2, western states 71, an increase of 23; Pacific states and territories 16, a decrease of 5, Canada and the Provinces 31, a increase of 6. Among the failures reported were Weber Brothers & Newbourn, wholesale dry goods, Heninger & Brinckheimer, importers of notions, and John Zitkeen, shipping, New York; Hyams Brothers, New York and San Francisco, wholesale clothing and retail clothing and gents' furnishing goods; Goodno, The Bangor (Mich.) Furnace Company, Charles B. Rhodes, pig iron, Chicago, and The Boston & Wheeler Glass Company, Glass Manufacturing company. In the principal trades they were as follows: General traders, 21, grocers 16, liquors 13, manufacturers 12, hardware, etc., 10, clothing 10, shoes 9, dry goods 8, grain, flour and millers, 7, tobacco and cigars 6, lumber 5, furniture 5, drugs 5, fancy goods 3, bakers and confectioners 3, commission 3, hat ress 3, carriages 3, wood 2, hotels and restaurants 2 gents' furnishing goods 2; jewelry 2, millinery 2

Spirit of the New York Markets.

NEW YORK, Oct 24th—The volume of wholesale trade keeps up to about recent proportions, albeit there is a falling off in the distribution of some of the leading manufa tures, notably textile fabrics, and the season is now so far advanced that no improvement can be looked for until the Spring trade opens, which, so far as the earlier branches are concerned, will be in the fore part of Winter. The general markets are without new or interesting features, either in the speculative or regular channels. The Grain markets have shown rather a bracing tendency, but the fluctuations have been narrow. In the face of a diminished crop of Wheat, Corn and Cotton, stocks are larger and prices are lower than they were a year ago in Provisions almost diametrically the reverse holds good, namely, a diminished supply, together with higher prices and larger exports. Stocks are low in accordance with the laws of commerce, which appear to have changed under the new methods of transacting business, or, in other words, under the growth of facilities. Reports from Europe indicate that the supply of Bread Stuffs is sufficiently large to preclude the possibility of high prices. Spot Cotton is steady and quiet. Wool, Tobacco, Hides and the leather continue dull. India Rubber is quiet and prices favor buyers Spirits Turpentine is lower and Rosin dull and steady Refined Petroleum is steady and Crude Certificates lower New Raisins and Currants are the turn clearer, Drugs and Dyes are dull but generally steady. Ocean freights are dull and without appreciable change Raw Sugars is quiet but steadily held. Refined is in moderate request and easier Molasses is dull. Coffee is quiet but firmer. Teas is dull Rice is in small demand Spices are quiet Fig Iron is dull and weak Copper is quiet and easy Tin is lower and dull Lead is nominal. Spelter is slow of sale Antimony and Sheet Zinc are lower.—*Shipping List*

Oregon Trade.

PORTLAND, Oct 26th The day has been almost disagreeable one as to trade weather, a high wind and cold showers prevailing. Trade necessarily suffers in consequence. For the week no complaint is heard, although a lessened business as compared with previous weeks is reported. There has been nothing of essential importance, everything moving steadily along. Steamship reports show a decided falling off, while rail receipts are about the same as last week.

Advices for a week have been 5408 tons under engagement and 1,653 tons engaged. Of the latter 700 tons since been cleared. There are now in port ships engaged 13,774 tons iron and 13,464 wood. The only spot transaction to report is the Clan Ferguson, iron 700 tons, by the Salem Flouring Mills Company, at terms held private, but quotable 17s 6d U. K. A larger iron vessel was offering at this rate, but he found no taker as yet. For wood a quotation is difficult, as cleared when iron can be had. The disengaged list will shortly be added to by expected arrivals. There is no rate at San Francisco for wood is 32s 6d direct. Vessels in berth are slow filling up, but there is no necessity for haste. Others to load have engagements ahead, but cannot be kept in readiness for cargo this month. The outlook for freights may be said to be unchanged, as it has not improved and has been far from cheering for some time. Rumors among the street say a vessel is wanted for Hong Kong, and one for lumber.

TONNAGE STATEMENT

In port, loaded, wheat	...	1,507
In port, loaded, miscellaneous	...	1,629
In port, loading, miscellaneous	...	1,741
In port, loading or to take berth, wood	...	4,711
In port, loading or to take berth, iron	...	18,927
On way, due Oct-Nov	...	9,199
On way, due Nov-Dec	...	8,745
On way, due later on	...	12,408
		10,952

Receipts of Wheat promised large early in the week, but have since fallen off to about the old figure. While operators still have considerable lots of wheat to offer, they are not so anxious, and would say they would like to have at hand now, there is less confidence as to transportation. Snake River Farmer complain bitterly, but they cannot market their wheat because it cannot be sent out of the section. Low water in the river permits of only about one half a load capacity being carried With higher water the trouble could be overcome The wheat recently sent to Minneapolis as an experiment, and found unsuited to milling purposes, was not a good sample of Walla Walla. It is not probable that further shipments will be made in the near future. Prices generally has moved slowly but steadily along in spite of the decline abroad. Buyers have put in their time principally, [illegible] during the week, and by no means pressed for wheat. Sales reported 37,547 bu, Valley at 87½c eastern and 81 60 for valley, but a shade advance is paid in the interior. At present, reported values at Walla Walla purchases equal 81 74 at Portland, and wonder if any reported sold at less than 1 75 per quarter, but the exact transaction is not obtainable at this time. Foreign markets continue slow and main barely sustain the recent advance.

Receipts of Flour larger, and more is going into store. The local call has picked up somewhat, and exporting promises larger. The Clan Ferguson was chartered for 700 tons, the Banffshire is loading, and the Scottish Prince nearly ready for cargo. These vessels take steam, bt cargoes for Europe. We hear of no stock for export and local values are firm at 5 50 for standard brands, with no trade change.

The Oat market shows improvement over last week, owing to a general desire on the part of local consumers to have more than a week's supply on hand. Sales of feed sizes have been made at 60@65c for those choice, common to good is quoted 55@60c. Reports of offerings from Puget Sound cannot be traced, and it is probable that they have gone from there to present values. The Sound ships large quantities to California on low freights, which cannot be had the way

As for our Hop market does not move more freely is not quite clear, for sellers would generally accept 20 cents, and buyers seems to be more margin between that and New York prices. Receipts now coming in are nearly all on outside account or to brewers. Consignment bids come in slowly and no sales of choice are reported. Herrin & Russell have received a consignment of 40 bales from Grand Ronde Valley.

There is very little to report in Wool Choice held at 18@19c, which is 1@2c above buyers' views. A half million pounds are being baled for eastern shipment. *Oct 27 mail.*

TOBACCO MARKETS.

SAN FRANCISCO.—Leaf '82 is arriving freely, one house receiving 11 car loads, and the other leaf firms have large lots on the way. Some of that which has arrived looks very fine and fully bears out the high opinion from the samples received here some months back. It is not all equal and we have been shown some which is decidedly inferior. Our impression is that it will not be fit for general use before March, some little is now being worked by manufacturers, who claim that they cannot find in the stocks of '81 the colors they want

There is no stock of fine Havana here, a lot of 31 bales which was received last week was sold the day it was taken from the railroad. The '81 Sumatra is about cleared out and the '82 is so much enlarged as to colors, that buyers do not like to trust it. But holders are very firm in their view of values San Francisco is shipping more cigars, ten to one it is said, eastward, than come to this State from New York. The suspension of work in the tenement houses under the injunction is one of the causes of this. The disproportion would probably not continue were it, at the supreme Court of New York should hold the Anti Tenement house law unconstitutional.

The stock of manufactured Tobacco is good but trade is slow for the season owin, to the difficulty of establishing the advance.

Local cigar manufa turers are feeling the scarcity of good hands

Collector Hartson of the Internal Revenue department reports stamps sold on October as follow:

Cigars	$17,567 65
Tobacco	13,572 08
Cigarettes	298 25

This shows cigar receipts running 1 share less than last month, nearly sixteen million cigars having been turned out

[U. S. Tobacco Journal.]

NEW YORK, Oct 20th. The week went along without excitement and hurry. Nevertheless the business transacted may well be called solid. Prices ruled generally at sides of from 50@100 cents to manufacturers and jobbers. People are beginning to "pick" The amount of fine tobacco is limited in fact, is already beginning to become scarce

Again the 1882 Pennsylvania took the lead. With all the noise and blunder with which this crop was ushered into the market, the unanimous voice of the day is that the bulk of it is by no means anything extraordinary in yield and color quality it has. It is calculated that among the 20,000 cases held in this city there are no more than 5,000 cases of really fine and well worth the money that is being asked for it.

But aside from this the situation looks emphatically and undeniably establishes the fact that this stock of fine tobaccos on hand will be exhausted before the year is out, and that the new crop will not yield its sceptre in our market. Nothing to the contrary is this than the fact that one uptown manufacturing firm has work purchased nearly 1,000,000 worth of Sumatra.

The present excited purchases of '82 tobaccos in the country at large and particularly those now held in the market for '82 tobaccos are absolutely unwarranted. When compared with the risks, these investments are foolish beyond comparison. Large manufacturers who purchase very heavily in the country are the ones who are to blame in this matter. This risk is comparatively small, while their action incites the dealers to imitation. It is not to be expected that the grower will take a lower price for months to come. The solid but '82 at prices upon which the dealers realized large profit, excepting those who were unfortunate enough to invest in '82 Connecticut. He will and does hang on for more and getting more prices. While this country raises enough tobacco, it raises too little fine tobacco.

[Western Tobacco Journal.]

CINCINNATI, Oct 22d. The offerings Saturday were very small, but old crops, and the fact that there were three representations in the whole, he speaks well as regards values. Nothing above Medium Wrappers, and in the selection, but all that offered, of every variety, even Smokers, sold well, and competition was great, several manufacturers buying strong. Almost all the local buyers and several small manufacturers were present also, and all contributed to an activity that would have been shown in a fuller line of quality offered, especially if composed largely of the better varieties Prices in general show an advance of $1 00 to 1 50 per hundred, ranging about as follows: Smokers 2 00@2 50, coming to Good Fillers 3 50 @5 00, Common Binders $4 50@6 00, medium Binders $6 50@7 00, Good Binders $8 00@9 50, and Medium Wrappers $12@14 00 The breaks were wholly those goods

The prohibition of the importation of American pork into France in the spring of 1881 greatly disturbed the domestic provisions trade, and expensive and exhaustive inquiries were made to disprove the charge that American swine were to be fully afflicted with trichina. Like action on the part of the German Bundesrath last spring did not excite the American provisions trade to much by so great an extent, and the export movement of hog products during the year 1 s quite justified the complacency with which this most logical and complete protection granted the German hog interests has been regarded. The United Kingdom, Denmark, Belgium and Holland are taking more of this class of commodity than ever, and the export trade is regaining lost ground rapidly, with France and Germany left out of the account.

Editor.

FRIDAY, NOVEMBER 2, 1883

The St. Louis *Grocer* gives tables of the averages of sugar duties under the old tariff and the drawbacks allowed by the Government on refined sugars exported, placed the average duties under the new tariff and the drawbacks allowed under it, and claims that refiners are receiving drawback of 10 to 12 cents per 100 pounds on refined sugar exported, more than the duties paid on the raws. This, it says, is virtually a bounty on the export of refined sugar—something which the Government never intended.

Progress that Helps Communities but Hurts Individuals.

The natural result of progress is showing itself in the traffic between San Francisco and the Hawaiian Islands. The two large steamers of the Oceanic Company, making semi-monthly trips, will carry so much of the freight that it is probable some of the sailing vessels in the five packet lines will have to be withdrawn. These steamers are capable of carrying from 25,000 to 30,000 tons of freight each way annually, besides passengers, and as there is no excess of the incomes in business between the ports, it must be drawn to coastal petroleum, which was formerly given to sailing ships. It is the old story—just what happened to the Liverpool and New York packets when steamship lines were multiplied; just what happens to stage coaches and the teaming business when new railroad lines are opened. Everybody wanted quicker passenger and mail communication; everybody interested in the Islands wanted these steamers built, and no one can expect them to run empty for the benefit of the sailing vessel lines.

The St. Louis *Grocer* does not often touch, even indirectly, on politics, but it seems municipal affairs have become so bad that "the principal work of city officers is to levy blackmail." It concludes an appeal to business men in these words: "We trust that in our city a law and order league will be established, for the circumstances are such that one is badly needed. There is work to be done in putting down many evils which otherwise would go unheeded. It is high time the citizens should take precedence of the politician."

The sugar refineries of Canada ask their Government to give them a drawback on all refined sugar exported equal to the amount of duty paid on raw sugar imported. The Government is considering the matter. The United States does better. It gives out is said more drawback than the duty amounts to.

Apia.

The Australian steamer which arrived on Monday brought us a friendly and very interesting letter from a resident in the Samoan Islands, who is a subscriber to the MERCHANT. He says, amongst other things, that the MERCHANT is full of interest to him, and he only wishes that Apia had better mail service with the civilized world. The Pacific Mail Company's Australian steamers pass in sight of the Islands, but only once this year have they landed the mail, and that was because a passenger for Apia was particularly favored by the Captain. In former times they have been without a mail for many months; now a small schooner is making monthly trips to Levuka, but even then the news is old when it is received. The latest issue of the MERCHANT which he had received was dated May 11th, and the letter from which we gain this information was written August 25th. "In return," our correspondent says, "for your kind communication, you have probably been waiting for some Samoan papers. Indeed, I should have liked very much to comply with my promise but for the entire lack of any publication in this place at the present time. The paper which was published here a few years ago did not pay, and the printing press and type were sent back to Fiji. Thus we are living a most antediluvian and paradisical life; no fighting, no slandering possible. The greatest power of the present age, the press, has no representative here; it is only the minor powers Germany, America and Great Britain, who have any. And life is paradisical here in more than one respect. Adam and Eve are still wandering about, clothed with a narrow girdle of leaves. A happy state of nature, the ideal of Rousseau; just what our communists and nihilists are striving for. Samoans prefer walking about, lying down in their houses and gathering fruit, to doing any harder or consecutive work. We can not blame them; we would do the same had not necessity taught us otherwise. Even now, when the consequences of the great hurricane of March 24th are felt in the great scarcity of food, the natives will starve rather than work. The Samoan is by no means an inferior specimen of humanity. If an impartial arbitrator could be found, he might very likely think the Samoan race finer than ours. They are splendidly built, have noble faces, and the brown color and softness of their skin is perfection. If left to themselves they might have reached any degree of civilized development; now, by contact with the white man, their fate is sealed, as is the fate of all their colored brethren in these seas. The presence of foreigners has made their patriarchal political system impossible, and they will hardly be able to remodel it so as to remain an independent political power.

As to the agricultural and commercial development of these islands, I think that the difficulties to surmount will be greater than in most of the other islands in the Pacific. The distance from the markets of the world is greater than from any other place, and though the land is fertile, it is very mountainous and stony. It has seen no plow so far. The main products are copra and cotton; the latter is a superior kind of Sea Island cotton. They are now making experiments with coffee and tobacco. As to sugar, the opinion is that it would not pay to raise it at the present time.

With such a climate and soil as the Samoan group has, a soil and climate which feeds the natives without labor on their part, this country ought to be very valuable; but its very fertility has largely destroyed its value by training its people in such habits of indolence that it will take more than one generation to breed industry.

WHISKY IN BOND.

H. B. Miller, President of the Western Export Association, has issued a circular to all distillers in the West. Ex. Ass., which embraces every distiller in the northern and western States, to join the Kentucky Association, which embraces all the distillers in the southern States, in asking the next Congress to pass the bill which was introduced during the last session for extending the time for the payment of the tax on whisky now in bond for two years. The principal points he makes are:

The amount of whisky in bond is so great that it is impossible to get it into consumption in the time specified by law, and, unless Congress grants relief, many firms will be ruined and wide spread disaster will be the consequence.

2nd. It is no use to inquire into the causes which have occasioned this overproduction. We have booms and panics in this country, one as senseless as the other, and it was during one of these booms that this overproduction took place. The whisky States have not made a third of a crop the past season, and the Western States have but little in bond. We are preventing an overproduction for the future, but what is done cannot be remedied.

3d. Precedents for this relief are not wanting. There never yet was a flurry in Wall Street but the Secretary of the Treasury came to the relief by anticipating the payments of interest or payments of bonds before maturity.

If the whisky distillers would consent to insert a clause in the bill, giving a similar extension of time for payment of the duties on fruit brandy in bond, it is probable that our viticultural friends would use their influence with the California Congressmen and Senators to obtain their support for the bill. The cause of temperance, though not that of abstinence, would be advanced if holders of whisky and brandy were encouraged to give their merchandise age before placing it upon the market.

The "Alta."

Some would-be humorous writers used to call the *Alta*, Grandmother, because of her age—the oldest paper in the State—but that nickname is no longer appropriate. The old lady is rejuvenated and is a belle amongst her contemporaries. A new dress of type of the handsomest of modern finish and typographical skill in make-up have made the *Alta* a beauty. Then there is new life in every editorial department. The *Alta* this week will not suffer by comparison with any daily in the State.

Ridley & Co., the stencil cutters of 323 Front street, have shown us a sample of Drew's patent street signs. The name is cut out of narrow strips of tin, like a stencil, four of which strips are lightly fastened together, making a square frame, and fit easily into a street lamp. The advantage is that the letters, being open, are as easily read by night as by day, if the gas is lighted. These signs are cheap, effective, and cannot be changed or destroyed except by moving the lamp.

C. A. Spreckels and wife have returned from their trip to Europe, where they have been on their wedding tour.

That "Fidelity" brand salmon is being blackballed in St. Louis and Chicago.

That the Veterans' Home will probably be completed before the last of the Veterans is dead.

That life to the young is hope, to the healthy and wealthy pleasure, and to many simple endurance.

That the public lost a faithful servant and journalism a man who was an honor to his profession in the death of James McClatchy, the founder and senior proprietor of the Sacramento *Bee*.

That the Sacramento salmon canner who does not place a distinguishing brand on his Fall pack, reduces the value of his more important Spring catch. Trade papers on the other side are paying particular attention to salmon brands.

That in large and rapidly growing cities it is not a certain indication of unhealthiness when the deaths outnumber the births. In the case of a town which increases 5,000 yearly by natural reproduction and 10,000 by immigration of all ages from infancy to senility, it would be surprising, perhaps, if the deaths did not exceed the births.

That our over-eager salmon fishers on the Sacramento almost every year spoil thousands of salmon by surreptitiously taking them before they dare openly land them at the river canneries or on the wharves of this city. Warm weather does the business. The Baltimore *Herald*, of October 17th, shows that oystermen do something of the same kind at the beginning of the dredging season on the lower Chesapeake. A spell of warm weather in the previous week, says the *Herald*, had caused 100,000 bushels of oysters, worth, if salable, $25,000, to be thrown overboard.

REMOVALS.—H. Palmer & Co., Mountain Wine Depot, have removed to larger premises, their trade having outgrown the capacity of their old store on Davis street. They now occupy a large store under the Merchants' Exchange, 435 California street, where they hope to obtain a still larger share of the patronage of the public for pure California wines and brandies.

Dalton Brothers, commission merchants and dealers in fruits, green and dried, and other produce, have removed to 308 and 310 Davis street.

W. W. Montagne & Co., the old established and well known importers, manufacturers and dealers in stoves, ranges, kitchen and tinware, metals, marbleized mantels and encaustic tiles, will remove on December 1st to the new building which that firm is erecting on the south side of Market street, adjoining the Spreckels Block and south of Fremont street.

The contract is let for the building of the Chaffey College of Agriculture at the thriving colony of Ontario, San Bernardino county, and work on it will be pushed as rapidly as possible.

THE HAWAIIAN TREATY.

There is no man in the Hawaiian Islands better acquainted with their history since the first American missionaries took up their residence with the natives than Mr. S. N. Castle, and from his life-long experience as a merchant in Honolulu, no man is better fitted to grapple with the problem of its industries and its commerce than Mr. Castle. We reprint, therefore, from the *Hawaiian Gazette* an exhaustive and critical argument by Mr. Castle on the report of the U. S. Commissioners. Next to the ability with which Mr. Castle treats his subject, the most remarkable feature is the candor with which he writes. The table of ownership of plantations to which Mr. Castle alludes in his postscript as prepared by the Hon. J. S. Walker, was published in full in the MERCHANT last week.

HONOLULU, Oct. 3, 1883.

EDITOR GAZETTE:—The Advertiser of the 1st instant publishes the report of the United States Sugar Commissioners—Mr. Carter in his letter to Mr. Gibson says: "The report is both fair and unfair." It is fair and just in its admissions that no frauds had been perpetrated—this had been proved before by United States ministers and consuls, unimpeachable witnesses. It was confirmed by the testimony of the commission. It is difficult to see how any other report could have been made upon the testimony before them. What seems unfair is the following in the report.

"The statement which has been frequently made that the greater proportion of the sugar planters are American citizens we found to be without foundation. Careful inquiry on this point regarding each of the estates on the islands shows that aside from the Hawaiian Commercial and Sugar Company (a company organized in San Francisco) less than one-fourth of the owners of sugar estates and persons engaged in the sugar business, are citizens of the United States. With a few exceptions, the business is in the hands of Germans and English citizens or Hawaiians. Among the latter are some who were born in the United States and have renounced allegiance to our government, or who, born in the islands of American parentage, claim Hawaiian citizenship."

This may be literally true, and yet the impression carried with it is not correct. It has never been claimed that no citizen of the United States owning property here had taken the oath of allegiance—or that their children were not Hawaiians by birth. These have been called Americans. As British and Germans under the same conditions are called by their original nationality, although by naturalization and by birth they owe a Hawaiian allegiance. Yet their affiliations are strong for their own country, they do not sever the ties of blood and kindred; they would not do it. Americans here, perhaps, feel no less interest in the welfare of their own country than those whom they have left behind. When the life of the nation was threatened, what city or hamlet in the broad land yielded up more freely or cheerfully its sons and daughters and treasures for the battle field, and caring for the sick and wounded, and soothing the pains and sorrows of the dying, than the American Hawaiians? Where else did any one holding the office and position, or anything corresponding to it, in dignity and emolument, as the popular Collector-General of the Hawaiian Isles, (W. Goodale) lay down his office and shoulder his musket to help save the country? Not was this case a solitary one, from the bench, (Judge Griswold) from college halls, (Armstrong and Emerson) from almost every honorable vocation did our American Hawaiians rush to the rescue. Some fell in the strife at Big Bethel—in the rifle pit on the borders of Alabama—and another carries the scars received on the bloody fields of Chancellorsville and Gettysburg. Where was the mourning more sincere, when Lincoln and Garfield fell, than right here? And where was the joy more genuine and heartfelt when victory united again the severed states of the United Republic, and where is it more marked in its unrivalled prosperity? It seems that the living interests, the ready sacrifice of treasure and blood in the past shall entitle Hawaiian Americans to the name American as so generally accorded them. They are here engaged in all the peaceful pursuits of civil life; agricultural, mechanical, mercantile and professional, and many have found it expedient to become naturalized, which is also true of other nationalities, but their love of country remains undiminished. There is here organized the De Long Post of the Grand Army of the Republic, and many Americans are scattered through the islands who fought in the war and were honorably discharged. Of Americans such as I have named, and of British and Germans, I am able to make the following statements from the tax-list of 1881.

Americans	1310	pay as property tax	$97,503 41
British	" 857	" " "	48,943 82
Germans	" 299	" " "	25,842 25

As the plantations form the largest item of property, it is presumable that its distribution in about the above ratio of ownership is correct, in the only sense in which it was ever intended.

The statement "that the greater part of the sugar machinery purchased for the islands since the treaty, has not come from the United States, but from England or Scotland, or was manufactured in Honolulu," needs modification and explanation.

There is but one iron foundry in the islands. It does naturally a good deal of work, and of all the material used since the treaty in its manufactures seventy-six per cent. has come from the United States and twenty-four per cent from British ports, so that of the large amount made here, more than three-fourths of the material was imported from the United States. This was not machinery, but the material of which it was made, and should be counted in this report as machinery imported from the United States. The whole of the machinery of Mr. Hoppe's large rice-cleaning establishment was imported from the United States. These facts most materially modify this statement in the report. But further explanation will show why machinery orders went to Great Britain which would not otherwise have gone there or perhaps anywhere.

Soon after the treaty, a member of an enterprising Glasgow house which had sold its manufactures in all parts of the world, visited the islands, visiting most of the plantations, and prospecting the unopened lands. To suitable parties wishing to engage in the planting business, he offered to furnish machinery, on favorable terms and time of payment, and in some cases, even took stock in the enterprise. In this way machinery was brought in and enterprises started, which otherwise most likely would not have been started at all. As no manufacturer or capitalist from the United States was on the ground to offer any such terms, these liberal terms, offered no doubt for the express purpose of selling their machinery, with no competing offers from the States, swelled largely the amount of British machinery imported. Without these explanations, the bare statement of the report does not do justice to the planters or Hawaiians, party to the treaty.

The report speaks of the "increased cost to the consumer on the Pacific Coast, of refined sugars, as compared with the price paid by consumers in the Eastern States."

I think it will be found on examination that sugars, like other merchandise, have sold lower on the Eastern Coast than on the Pacific, from its first acquisition to the United States, and it is due to natural commercial causes. It is further from the source of supply, and other reasons I will not mention. This difference in prices existed before the treaty and exists now, but the price to the consumers of sugar on this coast has not been increased. I think upon refined sugars, which can easily be determined by reference to San Francisco prices current, before and since the treaty. I find by examination that this is true of grocery grades

[In last week's MERCHANT we published a table showing the price in this city of refined sugar at the beginning of each quarter of every year from 1868 to 1883 inclusive, which shows that in the seven years since the treaty such sugar has sold in this market nearly 1½ cents lower than the average of the nine years before the treaty. —ED. MERCHANT.]

"The remission of duties does not go to the consumer or refiner, but to the planter," as the commission says, and he is the direct beneficiary.

This is the benefit derived by the Hawaiian Government in the stimulus it gives to its industries and general business increasing its production from 20,000,000 lbs. in 1875 to 107,000,000 in 1882, and increasing all classes of business in its proportion. Without the treaty there would probably have been no increase.

On the part of the United States it has also stimulated its industries. It has increased its exports to the islands from $800,000 paying duty, in 1875, to over $3,500,000 duty free in 1882. It has built and sold to the islands for its *coasting trade* 25 sailing vessels, 2,506 tons, and 11 steamers from 100 to 600 tons, 2,324 tons. In 1883 it has built in its ports for *coasting*, two fine steamers, 1,500 tons, and to run for freight and passengers, between San Francisco and Honolulu two of the most magnificent steamers afloat, 3,879 tons. During 1882—258 steamers and merchant vessels, of a gross tonnage of 172,610 tons, arrived at the islands, and 179 of these, with a tonnage of 103,591 tons; besides many of those bearing the Hawaiian flag are owned and officered by Americans. It has erected a line of packets of three large ships yearly between New York and Honolulu, via Cape Horn. Its outward and inward freights of nearly all Hawaiian and American products are earned by American ships. Purchasing and selling commissions, marine insurances, interest on several millions of capital loaned, dividends on several millions more invested, and numerous other incidental benefits, so large that, with a large nominal balance in favor of Hawaii in 1882, the United States sent only $102,000 in coin to pay for it.

Now all of these benefits have come to the United States and to Hawaii, as the result of the treaty. It is truly reciprocal. In proportion to the bulk of the commerce, what measure has done anything like as much for United States commerce? Allow it to lapse, and not Hawaii alone would feel it. The Pacific Coast of the United States would deeply feel the loss. It is not to be expected that little Hawaii would not feel it more than the United States, with its boundless wealth of people, property and dominion. It might be minutes to the former, but the latter would feel it too.

Without the treaty, which has stimulated all this expansion and life, Hawaii might have continued to raise 20,000,000 lbs. of sugar and have sold it in the United States, British Columbia, Australia and New Zealand, as before. The United States might have continued to sell us $800,000 worth of merchandise, paying duties thereon as we had money to buy. But the power that has opened our ports to 2½ millions, duty free, of American goods, that has built up such a marine and given it freight and so increased our productions, would have been wanting. All would have been dormant without commercial life or prosperity. In speaking of the report I have been led to speak of reciprocally good results growing out of it to both parties, in its commercial aspects. The report deals fairly with the matter of fraud charged on Hawaiians, and the charges made on its labor system. But its statements in reference to American ownership and purchases made abroad and increase of the price of sugars to the consumer on the Pacific Coast are liable to convey wrong impressions and unfavorable to the treaty, and require explanation and modification. It may be worth while to state that our sugars are invoiced about one-third higher than similar sugars from other parts of the world, so that our export of 87,646,294 of 1882 would be reduced to 85,097,520, if imported from China. This valuation by the planter is because he adds the remitted duty to the cost of production, basing his valuation on his expected returns. The same process would largely increase the exports from the United States to the islands. I will not speak of the treaty in what is regarded by many as its most important aspect to both countries, but will simply say that for the good of both countries I hope it may not be permitted to lapse.

Yours truly, S. N. CASTLE.

Practically the children of United States citizens born abroad *have been* allowed to vote and exercise other acts of citizenship on their becoming resident in the country, the same as those born there, and the parents of such have been allowed to do the same on their return to reside, without any form of naturalization. The word "forsworn" in the report must be misunderstood. The Hawaiian oath is very simple, containing no form of renouncing or renunciation. It simply pledges allegiance to the laws, and to bear true allegiance to the King.

I am greatly indebted to the painstaking labor of the Hon. J. S. Walker for the most thorough investigation of the question of ownership, by a personal examination of the case of every plantation, and that is a large majority of American owners as before detailed. In number they fully correspond with the property represented as given below:

American	$10,237,461
British	3,140,650
German	970,046
Hawaiian	644,240
Chinese	640,000
Danish	250,000
	$15,886,800

S. N. C.

DEATH.—Alexander Forbes, one of the early merchants of San Francisco, and who has ever been an active and enterprising business man of this city, died at San Rafael on Monday evening, after a few days' illness. Mr. Forbes was a gentleman of high culture, and a remarkable conversationalist. In business he was, like most Scotchmen, keen, shrewd and exacting of his rights. In his private life he was liberal and generous. He was one of the most active members of the St Andrew's and British Benevolent Societies. Though Mr. Forbes, as a rule, was a bold speculator, his judgment was so good that he never suffered any of the vicissitudes which have befallen so many other old Californians, and leaves to his widow and children a handsome fortune in real estate and personal property.

C. W. Kellogg has lost his daughter, Anabel, at the age of nineteen, after a long and painful illness. This young lady with her mother spent many weeks in Honolulu last winter, where she made a host of friends by her unaffected modesty, charming vivacity and uniform amiability.

John Kenfield, who for 30 years has been a prominent lumber man, died on Wednesday. He sold his large interest to the English lumber syndicate a few weeks ago.

J. H. Cutter whisky, A. P. Hotaling & Co., of San Francisco and Portland, agents, has distanced all other whiskies in popularity on the north on coast, as well as in California. Not only in Portland and western Oregon, but in eastern Oregon and all the thriving towns of Washington Territory. The name of Hotaling on the corks of all the whiskey the firm sells in bottles, is a guarantee to all who are afraid of being served with inferior stuff which may be rank poison, that they are getting a first-class article, made in Kentucky from the choicest product of the soil of its most favored county. It is a recommendation and certificate of respectability to saloon or store when it handles this whiskey, and hangs custom which otherwise would pass by. The same feeling obtains in this State, and strangers in country towns and travelers, who never dry find genuine Cutter whiskey, sold straight from bottles opened in their presence, to be as safe as they would in a first-class Montgomery street saloon.

We learn upon pretty good authority that it is not a minstrel "end man" who is after Shakespeare's "bones."

California Merino

The following correspondence between a California and Texas sheep man explains itself:

LOS ANGELES, Cal., Oct. 5, 1883.

Editor Texas Wool Grower:

Without being aware of it, your correspondent "Shepherd" not only proposed, but distinctly propounded the Californian French Merino sheep theory as we all along have advocated, viz: over all other classes of sheep a preponderating advantage of quantity and quality in an economic space. We will join issue with "Shepherd" on his own theory and employ his own weapon in the shape of his "*little buck.*" He says "I have a little buck whose weight is only about 20 lbs that shears without extra keep over 20 lbs of wool." We presume he means extra keep beyond natural herbage. Now, this resolves itself into a very simple mathematical problem, that any schoolboy of ten years could solve at a glance. Our Merino ram, which produced in March the fleece weighing 62½ lbs, weighed 224 lbs the following May, with a two-months' growth of fleece. Allowing 4½ lbs per month as a fair growth, without reckoning growth of flesh in the same time, the sheep when sheared would consequently weigh 215 lbs. If "Shepherd" will look fairly at these figures, without prejudice, he will admit that three sheep weighing 70 lbs each would obtain a total of 270 lbs against 215 lbs, the weight of our ram. He was fed when on service with, in addition to natural herbage, one pint of barley and one pint of bran each day.

Again, "Shepherd's" theory of eating is not always correct, it does not follow that a six-foot man will eat more than a five-foot man, and by the same rule the large sheep will not eat twice as much as the small ram; even if he eats three times the quantity, he would more than stand on vantage ground with little bucks. He will not stand on twice as much space as the little buck; he will outwalk the little buck, will only require the same amount of care from the shepherd, will cost no more to breed; will occupy but little more space if shipped by rail; the shearing can be done in nearly equal time, although the fleece is two-thirds heavier; the mutton equal; and the solution of the question is 270 pounds of flesh so for 60 pounds of wool, against on 215 pounds of flesh for 62½ pounds of wool, with less in proportion than half the the cost of food.

In our next issue communication we will give a detailed account of the breeding, feeding, etc., of our French Merino rams, that will probably satisfy "Vermontey."

FRENCH MERINO.

The eagle feeds best at a height of 12,000 feet above the earth, while the minute you get a man on the roof of a horse-block his knees begin to weaken and he can't remember a word beyond "Fellow citizens."

"Did the prisoner knock Mr. Smith down in retaliation?" asked the lawyer of the witness. "No, sir; he knocked him down in the backyard."

Texas Wool in Boston.

[Special Correspondence Texas Wool Grower.]

After a careful survey of this market we find that but one lot of full Texas wools has been received and that was a light lot of medium wool which was promptly sold at twenty-four cents per pound. The opinion is prevalent that all Texas wools will be sought after but whether they will bring more than fifty cents per pound clean is a question yet to be decided. It would seem that manufacturers still purchase Texas wools more as a means of cheapening by mixing with other wool. We are continually trying to find out just why wool growers have got into the habit of shearing their sheep twice each year and this day it now idea (to us) was advanced that it is done to escape the "spiral burr" from "burr clover," that is the fall clip is removed just before the burr ripens and the spring clip after the burr has lost its power of clinging to the wool. Some we are told clip their sheep twice to raise a little ready cash, and others have stated that in California the sheep could not carry a year's growth without the wool becoming matted on the back and producing sores. However this may be, we have not seen any well defined reason given for clipping sheep twice each year.

Jos. H. Wade.

When the duty on wool brings no more revenue than the duty on corn, and when it has no more beneficial effect, then it can be removed, but for its removal there is no advocate will be found. Our own production will do this in time, and competition will gradually lower values. All men expect this from the immense growth of our industry, but it is expected that changes in other industries, and the burdens of the people becoming lighter will nullify the effect and leave the sheep industry as profitable (comparatively) as before. We accept the inevitable.

THE WOOL MARKET.

During the past week there has been some 260,000 lbs of Northern Spring sold on private terms; also about 100,000 lbs of Eastern Oregon on private terms. We hear of sales of about 50,000 lbs of Southern Spring, but, at prices within our quotations. The stock of Spring, especially fine, is reduced to very moderate proportions. There has been nothing doing this week in Fall.

Nos. 129 and 131 Fremont Street, San Francisco., Cal.

CALIFORNIA Piano Manufacturing Co.

INCORPORATED UNDER THE LAWS OF CALIFORNIA, MARCH 8, 1882.

Manufacturers of Strictly First Class

UPRIGHT PIANOS.

Factory, 431 and 433 Fourth St., corner of Bryant. (Old Kimball Carriage Factory.)

Salesroom, 30 New Montgomery St., under Palace Hotel.

Our instruments possess the very latest improvements, and in TONE, TOUCH and DURABILITY are absolutely without a superior.

EVERY PIANO IS FULLY WARRANTED FOR 5 YEARS.

Our factory is the most complete on the Pacific Coast, possesses every kind of machinery, steam, dry houses, etc., in fact is as complete in all its appointments as any Eastern establishment, producing Pianos of uniform excellence and durability. An examination of our Piano-Fortes is earnestly solicited. Catalogues and full description mailed on application.

WALTER S. PIERCE, Secretary and Agent.

JUSTICE BAKING POWDER.

"Fiat JUSTITIA, Ruat Coelum."

SAN FRANCISCO, June 30th, 1883.

We beg to call your attention to our JUSTICE BAKING POWDER, each can of which we guarantee to be full net weight and to contain nothing but the purest Cream of Tartar and the best English Bi-carbonate of Soda, compounded on the most approved formula.

We make the price as low as it is possible to sell this quality of goods, desiring that the purchasers may feel they are getting value received, ALL IN BAKING POWDER, and that they are not involuntary contributors to extravagant newspaper advertising, or to the placarding of fences, as the intelligence must advise them is too often the case when they buy some other brands. At the same time, *Justice* to the manufacturer, *Justice* to the dealer, *Justice* to the consumer, and last, though not least, *Justice* to ourselves compels us to assert in unmistakable terms that, however *Majestic, Fairfield*, or *Scrutly Profound* the title by which any other is known, no purer, more wholesome, more effective, more economical Baking Powder ever was or can be produced, than that we now offer you.

Justice should be found in every city and town throughout the length and breadth of the land, and we solicit your kind cooperation in our efforts to place it there, feeling confident that the closest investigation and the severest ordeal to which Baking Powders can be subjected will prove its intrinsic merit and fully bear out all we claim for it.

With this introduction we are content to place our *Justice* Baking Powder before the public, and referring you to the accompanying memorandum of prices and style of packages at foot,

We are, very respectfully yours,

THE SAN FRANCISCO MERCHANT.

ESPECIALLY DEVOTED TO THE ENCOURAGEMENT OF THE

Productions, Manufactures and Commerce of the Pacific Coast.

VOL. XI, NO. 5. SAN FRANCISCO, NOVEMBER 9, 1883. PRICE TEN CENTS.

The Proposed Mexican Reciprocity Treaty.

In a few weeks the United States Senate will again be called upon to take action with regard to the pending proposed reciprocity treaty with Mexico. The friends of the treaty have improved the time between the sessions of Congress to collect facts in favor of it which seem unanswerable. The opponents of the treaty have suggested nothing new. When Congress adjourned there were doubts as to the effect of the proposed treaty, and its supporters were not able to give satisfactory answers. They are now relieved from that embarrassment. The State Department instructed its consuls in Mexico to furnish all information possible. Consul-General Sutton, at Matamoras, has just sent a report which, in as accurate a manner as is possible under the circumstances, shows the effect of the adoption of the treaty, his calculations being based upon our new tariff of 1883.

A closer examination of the terms of the proposed treaty shows that, omitting unimportant articles, the United States concedes the duties on five articles, viz: sugar, henequen, istle fiber, tobacco in leaf, and fruits; and that Mexico concedes the duties on twelve articles, viz: petroleum, carriages, tools, sewing machines, machines, stoves, naptha, clocks, vegetables, crude petroleum, steam engines and fruits. The comparative concessions under the treaty may be thus stated:

DUTIES CONCEDED BY

United States.		*Mexico.*	
Sugar	$75,000	Petroleum	$172,015
Henequen, etc	48,207	Carriages, etc	175,000
Istle	32,500	Tools, etc	25,000
Tobacco leaf	18,487	Sewing mach's	15 000
Fruits	4,000	Machines, etc	12,000
All others	881	Stoves	9,000
		Naphtha	6,500
		Clocks	5,000
		Vegetables	4,000
		Crude petrol'm	3,935
		Steam engines	2,500
		Fruits	2,500
		All others	9,731
Total	$179,075	Total	$742,351
Difference in favor of the U.S. (U.S. coin)	$489,041	Reduced to U. S coin at 90 cents	$668,116

The only considerable opposition in this country to the treaty—outside of the general objection to tariff treaties and the arguments founded upon absolute protection—have been respecting the provisions as to sugar and tobacco. The imports of brown sugar into the United States for the fiscal year 1882 were:

	Pounds	*Value.*
Brazil	228,683,398	$8,446,779
French West Indies	60,952,340	2,385,578
British West Indies	70,044,291	2,902,815
British Guiana	64,457,685	3,192,659
Cuba	1,107,578,529	63,297,787
Mexico	2,931,649	102,147
Porto Rico	78,768,975	3,302,855
Other countries	261,132,189	9,426,485
Hawaiian Islnds (free by treaty)	106,181,858	6,918,083
Total dutiable	1,873,546,056	$83,147,135
Grand total	1,97,7279,914	$90,065,218

This shows an importation of 39 3-5 pounds to each inhabitant. Taking into account, at the same time, the amount of refined sugar exported during that period, which was 13,761,069 pounds, the actual net imports into the United States were 39⅘ pounds per capita. But a fraction more than 1-10 of 1 per cent of all the imports come from Mexico, or about an ounce per capita. The proposed treaty, therefore, would reduce our revenues from sugar about 1-10 of 1 per cent.

The representatives of the Louisiana sugar interests, however, have argued that if the treaty should be ratified the effect would be a very greatly increased production of sugar in Mexico, and that, consequently, the concession would be more valuable than it even now appears to be. The argument, doubtless, has a substantial foundation, but the conditions of sugar production in Mexico are very different from those which affect it in this country. A mere statement of them will show that there is less reason for fear than is apprehended. The total sugar exports of the United States for five years, in American coin—years ending June 30—were:

1878	$251,622	1881	$286,143
1879	217 173	1882	239.468
1880	445,803		

In addition to the labor question, successful sugar culture in Mexico is dependent upon irrigation, malaria and other fevers, and on the very important element of placing large sums of capital at a great distance from home, upon export duties, and upon local taxation. Mexican labor is a very uncertain dependence, irrigation is always expensive, and the water supply is uncertain. The health problem is a very grave one. Foreign capital requires very large inducements for investment in Mexico. The States of the Mexican Republic have by no means surrendered their independent right to enforce export taxes, and in Vera Cruz, the chief sugar-producing State, this duty is at present so great as to seriously embarrass planters, and to prevent capitalists from starting new plantations. This export duty is such a burden that it would prove a serious check to excessive exportations from Mexico. The local expenses of these States are large, their finances are poorly managed, and they are always in want of funds; so that there is very little probability that they will relinquish the right to impose these export taxes. There are besides much race prejudice, the embarrassments connected with a foreign language, the uncertainty of justice, and the standing menace of civil disorder. Moreover, should sugar growing be materially increased in Mexico, it is probable that refineries would be established there and that a large portion of the native sugar product would find a market in Mexico, and to a corresponding extent, both the exports of crude sugar from Mexico and the imports into that country of refined sugar from the United States would be reduced. Considering all these points, the estimate made by our consular officers of the possible increase in the Mexican sugar production is that it may double within six years.

The commercial arguments are, therefore, in favor of the treaty. There is another point which should prompt the American Government to agree upon any fair terms of reciprocity. The testimony of our consuls is that European merchants, and the agents of European governments, are unanimously opposed to reciprocity between the United States and Mexico. There should be no reason why countries occupying the same continent, separated from each other only by a river which in parts can be forded, should not have reciprocal trade relations. But countries now separated from Mexico by the broad ocean almost monopolize the trade of that country. As the railroads which are to connect the United States with Mexico approach completion, this condition of affairs seems even more abnormal. The objections to the treaty seem to be mainly suggested by selfish interests, and even if they had a substantial basis they would not offset the advantages of reciprocity. *Bradstreet's.*

"I want to buy a large line of groceries for my ranch," said a Marian county dairyman to an affable young clerk in a big wholesale house on Front street, the other day. "Certainly," replied the clerk, continuing, "What lovely weather we are having! October is generally so rich in sunsets and golden days!" "Weather and sunsets be blowed!" responded the rancher, "how much is flour worth?" "Flour, my dear sir? Certainly. Flour is flour, these days. Who do you think will be the next President?" "President to blazes! how much are bacon sides?" "A shade lower to-day, I think. The trouble between France and China promises to be quite serious, don't it?" "What in thunder do I care about China and France? What are you quoting oil cake meal at? Want some for the cows!" "We don't keep it. Are you going to see the minstrels to-night? They have one very funy act, in which Billy Emerson tumbles through a" ——— "D—n the minstrels! What are you paying for California cheese?" "O, yes, we buy largely. Send us a sample. Did you see the last number of *Harper's Weekly*?" And at this point patience ceased to be a virtue, and the gentleman from Marin county roared: "To the infernal regions with *Harper's Weekly*, the next President, the weather and Emerson's Minstrels, your glorious October weather and your sunsets! I came in here to talk business and to leave an order for the whole winter's supplies!" Leaving the astonished clerk wondering what had struck him, the M. C. man bolted out of the establishment and three doors lower down got his orders filled in ten minutes by a man who knew how to talk business. And this is no exagerated picture, either.—*News Letter.*

[Isn't it? Who's the new liar, anyhow? He's not vulgar enough for "Mag."—ED. MERCHANT.]

One of the great obstacles to the export of wheat from British India hitherto has been imperfect railroad facilities, and yet the remarkable thing about the railroad system of that country is the rapidity with which it has been developed. In 1854 there were only 21 miles of road in British India, and now there are 9,879. That is, mileage is more than forty-seven times as great as it was twenty-nine years ago. The mileage of the United States is less than seven times as great as it was in 1854. British India has, however, only about 10 miles of road to every 1,000 square miles of area, while we have about 32 miles. The Indian roads have not yet any of the modern facilities for receiving and discharging freight, but the former exorbitant tariffs having been reduced this disadvantage will now doubtless be attended to. The system of irrigation was materially developed last year. The Sirhind canal, in the Punjab, for the irrigation of 780,000 acres, is already over 500 miles long and has 2,500 secondary streams.

OLIVE CULTURE.

[Written especially for the San Francisco MERCHANT.]

ARTICLE II.

As some attention seems to be given to information about Olive Culture, the following notes may be added to what has been published in your columns on Spanish varieties.

Let me first correct the statement of the amount of heat necessary to mature the olives of the Gordal Sevillano. It is 3,100 degrees, not the minor figure stated in your last issue. [The statement, 2,400 degrees was a typographical error.—ED. MERCHANT.] The fruit of the Manzanillo olive tree weighs, at an average, 8 grammes, of which ¼ is the weight of the seed. Gathered before attaining its maturity, this olive is one of the large pickled kinds, the size and taste of which are well known in America as hailing from Seville. The saving of the vegetative power of the tree by picking the olives green, rebounds vastly to the benefit of the tree, which is a safe bearer. The Gordal Sevillano, yielding olives of a size that in Seville arrive at a weight of 12 and even 14 grammes, of which 2 grammes belong to the kernel, is a scant bearer and certainly not to be compared as to profit with the Gordal (Hispalensis). The Gordal Sevillano, which is easily injured by frost, yields fruit of about half the size of the Andalusian variety, in the province of Madrid, and may show modifications when transplanted to different regions of California, these, however, may turn out quite favorable. It is proved by history that the large olives of Seville were well known in the times of the Romans.

Amputations of limbs and strong pruning are hurtful to the Gordal Sevillano tree. It requires the best soil and positions sheltered from the cold. The oil from this tree is poor and bitter.

The Belloturo fruit weighs 4.1 grammes, of which 3.2 is pulp, thus about ¼ is kernel. It yields early, and its fruit produces good oil. In Spain it proves to be a poor bearer, but Don José de Hidalgo supposes that where art assists nature, the tree may be productive. That authority cites Liebig's true assertion as applicable in this instance, that where at the time of blossoming a plant can obtain abundance of phosphates, the fruit will develop with safety, but where the soil cannot give that substance freely, the blossom becomes abortive. The pruning of the Belloturo requires great attention, in order to counter the tendency to disorder and intricacy of the growth of its wood.

The Redondillo fruit weighs 3 grammes of which 0.5 is stone, is of blue-black color, and its inside of a white color, and used for eating, but yields also oil of good quality. It may be a near relative to the Manzanillo, the leaves being quite alike, but shape and size of fruit differ considerably.

This tree, which is of medium bearing power, has very clear wood and is free of warts. It is one of the most frost-resistant olive trees, requires good soil, fertilizers and repeated trimmings. Where such care is bestowed on it, this tree pays with regular and abundant crops.

The olive of the *Lechin* or Pichollin weighs only 1.3 grammes, of which the pulp weighs the 1 gramme and 3-10 gramme the seed, and it yields plenty of good oil. The small size of the fruit is compensated by the abundance of it. The tree, in good soil and with manure, grows high; where those conditions, are not present, its size remains medium.

Verdillo blanco yields a fruit weighing 4.3 grammes, 0.7 the seed, and the oil in the pulp is very abundant. This olive is used exclusively for oil. Early maturing, the fruit is easily detached from the tree and not hurt by the picker. The pruning of this tree should be carefully done, as the branches have not an abundance of small twigs.

The *Viral blanco* fruit is of middling size, and yields oil of good quality. This tree is an irregular bearer, but giving it the proper elements and care, may probably prove a good variety.

The fruit of the *Empeltre* weighs 4 grammes, 0.8 of which belong to the seed, the pulp is easily detached and of white color; the skin is violet.

The Empeltre olive tree appears to be of great importance for exposed positions, it being eminently resistant to cold and its wood of the cleanest; when hurt by insects, the bark heals immediately. The fruit is good for eating and its oil is of good quality. The constancy of the crops of the Empeltre even in dry soil, although irrigation is productive of greater yields, render it one of the very best varieties to propagate.

The *Racimal* olive weighs 3.7 grammes, of which 0.7 is kernel; the skin is black and the pulp of a dark color. Is one of the earliest ripening olives, its oil is of regular quality, but depositing much sediment. It is not an annual bearer. In pruning, this tree requires discernment, as its branches grow slowly.

The *Viral Negro* olive weighs 3.1 grammes, of which 0.9 is the weight of the stone; it yields good oil. The tree cannot resist much cold —5° centigrade and rapid thawing of ice is destructive to it.

Colchonudo, a tree arriving at great size, and of clean wood, not liable to diseases, is of great resistance, but is only a bi-annual bearer. Fruit weighs 3.4 grammes; stone 0.8 grammes; yields oil abundantly and of good quality. Thrives best in calcareous soil, and, if manured and properly cared for, will do well and become robust and a free bearer.

Ojillo de Liebre is a small tree of not particularly fine shape, and requires fertile soil and good cultivation. Fruit weighs 3.3 and stone 0.6 grammes, and does not mature very early. As a rule the olives are beaten off the tree, a procedure which is much criticised, but growers maintain that this variety wants that violent way of gathering and would not bear fruit if the olives were taken off by hand. The beating may clean off small useless twigs, but Señor Hidalgo holds that proper cultivation will be the real source of fruitfulness and study and consideration of the true wants of this and other trees be conducive to different results.

Carrasqueno, a tree of small dimensions with small flexible branches and brittle wood, yields olives of 4.4 grammes weight, 0.6 of which is stone, good for eating and yielding very good oil abundantly. Requires fertile soil. In trimming, this tree exacts great judgment.

The Most Powerful

—AND—

FASTEST WORKING PRESS KNOWN

A. DRIOTON

LOS GUILUCOS, SANTA ROSA,

SONOMA CO

Sole Agent for California and Pacific Coast.

Orders should be sent to me before the end of December, so that the delivery of the presses can be made before the next crop.

Circulars Sent free of Charge on Demand Application.

James Hunter, gauger of wines and spirits, whose card appears in another column, is, we believe, the oldest gauger here, having commenced business in 1855, when quite a young man.

We wish to call attention to the new French wine press, for which A. Drioton, of Los Guilucos, is agent, as will be seen by the illustration in our advertising columns, it is by its compound action and apt mechanical appliances now used for the first time in this connection, at once the most powerful and the fastest working press known. Vignerons needing a press should send to Mr Drioton for a circular.

Mataro cuttings, though very much in demand, are not very plentiful in this State. Charles Le franc, of San Jose, advertises some for sale, and Mr. Denicke, of Fresno, offers some. Those who desire to plant this vine should bespeak them without loss of time, as there are not for sale in the whole State more than enough to plant 200 acres of vineyard, and probably not so many.

P. O. Burns, of Yerba Buena Vineyard, Santa Clara County, is offering by advertisement in another column, 50,000 Riparia or Phylloxera resistant cuttings for sale. Mr. Burns' cuttings are all guaranteed carefully washed with disinfectants before shipment.

THE WINE MARKET.

[For Exports and Imports, see Merchandise Market.]

The vintage may be said now to be closed, though a few loads of second crop or late grapes may still be on the vines. We can console ourselves for the fact that if our crop, from extraordinary causes, is short this year by 2,000,000 gallons, the quality on the average is much better than ever made in California and the red wines deeper in color than last year.

Good Brandies continue to find a sale within our quotations.

Brandy. Original Government Gauge in Bond made from Wine:

Bbls	'81	95 @	$1 10	'82—85 @ 95 cts

M. DENICKE,
Fresno, Cal

(Continued from page 66.)

The fruit of the *Grodal* (Hispalensis or real), one of the largest and finest olive trees, grows easily and rapidly, weighs 4 2-3 grammes, 0.5 the stone. When ripe, the olives are of a gray-black color; it is an excellent eating olive. The tree is as resistant to cold as the Cornicabra variety.

The *Gordal* olive tree bears fruit weighing 4 7 grammes, inclusive of 0.6 of stone; color of a violet-black; pulp easily detached from the pip. The resistance of this tree to cold is very great and its fruit good-tasting for eating and yields very good oil. Lives in all regions, the coldest of the north in olive region as well as in the hot south of Spain. To secure large crops with regularity, the picking of green fruit for pickling is a safe means. It requires frequent clearing of superfluous limbs.

The late variety *Manzanillona*, a tree of middling size and great beauty of shape, bears fruit of large proportions, reaching a weight of 12 grammes, on gramme of which only is kernel. This olive is one of the best for eating and yields oil of good quality. Like all olive trees of reduced dimensions, the Madrileño, which is not represented in quantities in Spanish olive groves, requires great care.

Cornicabra Rostrata), the tallest olive tree in Spain and the head of a family of varieties, yields olives of 5.2 grammes, of which 1.2 grammes is the stone, and from which the best oil of the late maturing kinds is produced. This tree requires 3,978 degrees of heat (see article last week on aggregate temperature); resists cold, although with rapid thawing of ice, its branches may be injured. Lives in all kinds of soils, yielding abundantly in fertile and open regions with proper fertilizing.

In the Ebro valleys the Cornicabra is called Azdauba and arrives at colossal dimensions. Rather than too frequent trimming, manuring will favor the prodnctiveness of the Cornedura tree.

Cornezuelo, or cornicabra olorosa, is similar in size to the former and the shape of the first, although smaller than the Cornicabra is similar to it, being on one side somewhat comparable to the keel of a ship. Fruit weighs 3 1 grammes, inclusive of 0.6 of seed. The tree resists extreme cold, but requires great heat in the ripening period of the plant to mature its olives. The best oils of the northern Spanish olive zone are derived from the Cornezuelo olive. Young trees of this variey bear better than old ones; they do well in dry soil, but rear warts and nodosities on the bark.

This tree and the varieties of the Cornicabra family do not bear amputations of large limbs. Under good cultivation and careful treatment they bear well.

Ineitano olive-trees are of very shapely form with long curved limbs and their secondary branches inclined toward the ground. The fruit weighs 6.2 grammes, its stone 1.2 grammes, and is of similar shape to the Cornicabra fruit; its color is dark gray-black, pulp little whereat. In soil not adapted to this variety it is only a triannual bearer.

The *Picudo* olives reach a weight of 5.2 grammes, of which 1 gramme is stone, and are of excellent taste for eating, yielding equally fine oil and copiously. The shape of the fruit, although rounder and fuller on their upper part, is again similar to the Cornicabra olive form. The tree is not so tall as that variety, and the leaves are quite different.

Nevadilla negra is a tree of very full foliage, yields fruit of 1.3 grammes, 0.7 of it kernel, and this olive is the most esteemed oil fruit. It resists cold and is one of the earlier of the late maturing varieties. It requires, like all very densely wooded trees, good soil and cultivation, and where given these it is one of the best paying varieties.

The *Small Arragonese* olive tree grows in cold positions. Its fruit, of small size, is allowed to fall from the tree fully ripe and constitutes one of the aliments of the people in Aragon, eaten after simple soaking in water and allowed to stand—to regain its original size.

Of the best varieties I have ordered copious collections for thirteen gentlemen, Professor Hilgard, Messrs. Llvern ore, Krug, Eisen, Wetmore, Drummond, Shorb and others, among them, and one complete set of everything for the University of California, not from my nurseries you speak of, which are not ready to deliver anything this season, but from the safest source in all Spain, Don José de Hidalgo's vivero; which ensures absolute reliableness as to variety.

F. PODENDORFF.

St. Helena, November 4, 1883.

PRODUCE MARKET.

The Imports and Exports given below are up to Wednesday evening

FLOUR—
Receipts of week, 214360 qr sks.

Prices for Extra are the turn higher—this in consequence of the higher rates paid for the raw material The fine ships for Glasgow had the emnvalent of 18641 lbls and the Warwick Castle, for Dublin, had 18150 bbls

Extra, $5 50@5 60; Superfine, $1 00@1 50 Country dutto, $3 65@4 00; InterneExtra $4 10@5 25 per bbl for jobbing parcels.

WHEAT—
Receipts for the week, 272568 ctls.

Advices from Europe are more favorable, and the local market, both on speculative account and for delivery by sample, has been active at advancing rates. In the sample market No. 1 is quotable at $1 77½; and Choice Milling at $1 80. On Call yesterday afternoon No. 1 sold as follows: Seller, December, $1 81⅞; buyer, '83, $1 82¼, buyer the season, $1 93¾; seller the season, $1 81 per central

BARLEY—
Receipts of week, 60842 ctls

The receipts average about 500 tons per day, and several large consignments are known to be fully due from Southern coast ports, but the market remains very firm, and at the close yesterday had an upward tendency. We quote: Feed, by sample, at 97½@97 $1 05 for Dark Coast to Choice Bay; Brewing, $1 07½@1 15; Chevalier, $1 35@1 50 for Fair to Choice Bay. On Call yesterday sales of No. 1 Feed, in 1000 ctls lots were made as follows: Buyer this season, 100, $1 15¾; 200, $1 15½, 200, $1 15⅝; 100, $1 16¾; 100, $1 16⅞; 100 $1 16⅝; Seller this season, 100, $1 03¾; 100, $1 03⅝; 100, $1 03¾; 100, $1 03¾; 100, $1 03⅝; 100, $1 04⅜; buyer 1883, 100, $1 09⅝; 240, 1 09¼; seller 1883, 100, $1 05½; 200, $1 06; 100, $1 06¾; 100, $1 06⅝.

OATS—
Receipts of week, 23371 ctls.

During the week about 1000 tons have been received from Puget Sound, and other large consignments are expected at an early date, but no decrease in prices is to be noted. This from the facts that late important consignments come to strong hands who will not permit a break in the market.

Arrivals are moderate and market steady. Black, $1 45@1 45; White, $1 50@1 75 per ctl for fair to strictly choice.

CORN—
Receipts, 1919 sks

Large Yellow, $1 45@1 50, White, $1 50@1 55, Nebraska, $1 42½ per ctl. Quotations are largely nominal.

BUCKWHEAT—
Receipts of the week, 34 sks.

The demand is active, receipts light, and market firm at $2 50@3 00 per ctl.

RYE—
Receipts of week, 2100 ctls

Quotable at $1 20@1 25 per ctl; stocks are free, but for the most part held to meet Call Board sales made some time since.

MILLSTUFFS—
Receipts of week, 10116 sks Bran, 1131 sks Middlings, 1854 ctls Ground Barley. 450 ctls Ground Feed.

We quote: Ground Barley, $24@25 per ton. Middlings are selling at $17 50@20 per ton; Wheat Bran, $15@15 50 per ton; Oil Cake Meal $32 50, Feed Corn Meal, $35@36, Cracked Corn, $36 per ton.

HAY—
Receipts of the week, 1866 tns

We quote: Alfalfa, $7@8 10; Wheat, $14@15; Stable, $12 00@14 00; Wild Oat, $13@15; Cow, $9@11; Barley, $10@12 50 per ton.

STRAW—
Receipts of week, 129 tons.

Quotable at 55@65c ₱ bale, as to condition.

SEEDS—
Receipts of the week, 401 sks mustard, 1482 sks flax, 97 sks Alfalfa, 19 sks canary

Flax quotable at $2 75@3 00 ₱ ctl; Canary, 5½@6c; Alfalfa, 12@13c ₱ lb; Timothy, 8@9c for native and 8@9c for imported. Mustard, choice Brown, $2 25@3 00 ₱ ctl; White, $2@2 50, Hemp, 5@5½c, Rape, 1½@2c.

BEANS—
Receipts of the week, 17606 sks

The first lot of new Reds were offered for sale on change Wednesday and created some stir as there had not been any old or new on the market for some time —all the dealers were after them and they were finally closed out at 3¾c

Small Whites continue the king pin There are two factions in the field and both operating with power—the bears get in once in a while and make the smaller operators tumd, but the general tendency for this variety is upward.

Pinks are not so weak as they were. Bayos go off more readily Butters have lost their ground and are now selling at less than Whites. Limas are neglected; there is a great diversity of opinion as to the future of this variety.

Our quotations are, for round lots from the wharf: Small White and Pea, $3 30; Bayos, $3 30; Pinks, $3½; Reds, $3½; Butters, $3¾; Limas, $3 40

VEGETABLES—
Supplies this week have been light and the market is without change

We quote: Carrots, 35@50c; Turnips, 75c@$1 00; Cauliflower, 60c@75c ₱ doz: Cabbage, 60@75c ₱ ctl; Garlic, 1¾@2¼c ₱ lb; Celery, 50c ₱ doz; Dried Okra, 20@25c ₱ lb, Dried Peppers, 10@12½c ₱ lb; Green do, 50@75c ₱ bx; Green Peas, 5c@— ₱ lb; Tomatoes, 1.25@50c ₱ box; String Beans, 4c@5c ₱ lb; Artichokes, 10@15c ₱ doz; Green Corn, 8@15c ₱ doz; Lima Beans, 5@5½c ₱ lb; Beets, 75c ₱ ctl; Parsnips $1@1 25 ₱ ctl; Marrow Fat Squash, $8@10 ₱ ton. Cucumbers, 75c@1 00 per box.

FRUITS—
Strawberries advanced early in the week, but as the later arrivals were of poor quality the price declined to last week's rates. Good shipping Apples and Pears are in good demand and command top rates

We quote: Domestic Strawberries, 8@10 ₱ chest, Apples 40c@$1 50 ₱ box, Pears, 50c@$1 25 per box, Quinces $1 25@1 50, Grapes, 30c@$1 00 ₱ box; Cape Cod Cranberries, $18 00 per bbl; Western do, $16 00 per bbl.

Tropical—Lemons, $10 00@11 00 per box for Sicily; Limes, 35c@7 00 per box for Mexican Tamarinds, 12c@13c per lb; Bananas, $1 75@3 00 ₱ bun'h, California Oranges, $2 25@2 50

NUTS—
We quote: Cocoanuts, $8½@9 ₱ 100, California Walnuts, 8@9c ₱ lb; Chili do, 8@9c; California Almonds, hard shell, 7@8c; soft shell, 14 of late; Filberts, 11@12c; Pecans, 12@13c; Peanuts, 5@6c, Brazil Nuts, 12@13c; Hickory Nuts, —

HONEY—
We quote: Extracted, 6½@7½c, Ex White Comb 18c, White, 15c; Dark, 12½c.

BEESWAX—
We quote 28@30 c per lb.

DAIRY PRODUCE—
The market has about reached as low a notch as will be touched before next January. The demand is very active and stocks are absorbed as soon as they arrive.

We quote: Point Reyes, 37½; Choice, 32½@35; Fair to Good, 22½@30; inferior lots from country stores, 16@17c; firkin, 20@21c for old and 24@27½c for new; Eastern, 15@17c; Pickled Roll, 25@27½, Cheese, California, 15@16c for choice, 11@12c for Fair to Good; Gilroy, in drums, 15@17c, Eastern, 17@18c, Western, 8@12½c.

OLEOMARGARINE—
We quote the range from 20 to 22c, according to package

EGGS—
The receipts of Eastern Eggs have been very heavy during the week, and the market for Eastern Eggs is weak and in consequence, Choice California Eggs are very firm.

We quote: California Eggs, Choice Ranch, 12½ to 15c per doz; Eastern, 25@27½c.

POTATOES—
Receipts of week, 23456 sks

Many River Reds are being hauled to warehouse, consignees not being able to sell them.

Early Rose are out of season for the table and not yet wanted for seed.

Tomales, Cuffy's Coves, and all good go off readily at quotations.

We quote: Chili Garnets 75c; Early Rose, 40@50c; River Reds, 15c; Tomales, $1; Cuffy's Coves, $1 15; Humboldts, $1 05.

ONIONS—
Receipts of week, 5692 sks

Good quality scarce and sell readily—no change in prices

We quote the market at 60@65c.

POULTRY—
Poultry generally is in fair request

We quote: Turkeys, Live Gobblers, 18@21c ₱ lb; Turkey Hens, 18@20c; Dressed — Young Ksts, $5 50@7 50; Old Roosters, $5 50@6 00; Hens, $6 00@8 00; Broilers, $4 00@5 00, according to size; Ducks, $7 00@8 50 ₱ doz; Geese, $1 75 or2 50 per pair.

GAME—
Game is coming in quite freely and prices are lower

We quote: Quail, $1 25@1 50 ₱ doz; Hare, $2 25@$2 50; Rabbits, small, 81ogs1 25; cotton tail, $1 25@1 50 ₱ doz; Teal, $1 25@1 50, Sprigs, $1 75@2 00; Widgeon, $1 25@1 50, Mallards, $3 75 ₱ doz; common snipe, 50c@75c ₱ doz; do, English, $1 25@1 50 ₱ doz, Grey Geese, $2 50@2 75 per doz; White Geese, $1 50@1 75.

HOPS—
The market is about in the same condition as last week. The Eastern demand for strictly choice Hops still continues.

WOOL—
Receipts of week, 5032 lbs

For Wool market see Wool Department.

THE WHEAT FLEET.

During July, 9 grain vessels cleared of 12,622 register tonnage carrying (including 7602 ctls, valued at $7,627), shipped to miscellaneous ports) 385,680 ctls of Wheat valued at $550,234 besides 31,013 bbls of Flour valued at $177,533, which includes 20,109 bbls valued at $124,513 shipped to China and elsewhere.

During August, 24 vessels cleared of 32,830 register tonnage carrying (including 4922 ctls, valued at $8,390), shipped to miscellaneous ports) 956,691 ctls of Wheat valued at $1,664,019; besides 86,614 bbls of Flour valued at $422,558, which includes 15,583 bbls valued at $2221; 918 shipped to China and elsewhere

During September, 36 vessels cleared of 53,106 register tonnage carrying (including 1842 ctls, valued at $3,187 shipped to miscellaneous ports) 1,752,317 ctls of wheat valued at $2,790,053; besides 78,650 bbls flour valued at $391,174 which includes 57,153 bbls valued at $275,124 shipped to China and elsewhere

During October 36 grain vessels cleared of 49,929 register tonnage, carrying (including 2,255 ctls, valued at $3,889, shipped to miscellaneous ports), 1,505,057 ctls of wheat, valued at $2,549,-158, besides 105,894 bbls of flour, valued at $505,882, which includes 78,479 bbls, valued at $161,541 shipped to China and elsewhere

VESSELS CLEARED SINCE NOVEMBER 1st.

Finance and Trade.

Money is working closer, and bank rates for the past few weeks are easily obtained. Outsiders are following the banks pretty closely in their asking rates for money. Very few private capitalists are now willing to lend under 6 per cent, on good collateral, and they sometimes get 7, which is the general bank rate for the average commercial paper. Most of the Saving Banks are asking 7 per cent, on city real estate. It is thought that a good deal of money has gone out of the market in a quiet way in the past few months, probably through the shipment of Silver certificates in the mails. Domestic exchange is quoted at 20c premium for sight drafts on New York and 30c for telegrams Bank bills on London are drawn at 489¼d, for 60 days, commercial bills on London, 50d; Refined Silver, 1.31@1.4 per cent discount Mexican Dollars, 98c@$1.

Freights and Charters.

The English market for "just shipped" is one shilling better per 500 lbs than last week, say 46s instead of 45s per No 1 wheat iron ships, but the advantage seems to have gone entirely to wheat holders There have been some half dozen charters drawn in the past week, principally wood ships at 32s 6d Liverpool direct, and at 35s 9d Cork for orders, U. K., Havre or Antwerp. Vessels can be had at these rates to-day.

Iron ships, medium size, are held at 40s Cork U. K., plain charter with 37s 6d bid. No business resulting.

The vessels in port, chartered for wheat, have a tonnage of about 66,000 tons, against 62,000 tons at this time last year The disengaged tonnage in Port includes 30,000 tons at neighboring ports, against 61,000 tons inclusive at this period of 1882.

The engagements for the past week have been: Ship R. R. Thomas, 1384 tons, wheat to Cork, U. K., Havre or Antwerp; 35s 9d. Br. bark Chieftain, 893 tons, wheat to Cork, U. K., 55s—chartered prior to arrival. Br. ship Micronesia, 1699 tons, wheat to Cork, U. K.; 62s 6d—chartered prior to arrival. Barkentine John Worster, 581 tons, lumber to Sydney: private. Ship Henry Failing, 1901 tons, wheat and merchandise to Liverpool direct; 32s 6d. Br. ship Bothemay 1245 tons, wheat to Cork, U. K., Havre or Antwerp, 35s, direct port, 2s 6d less. Br. bark Emily L. Boyd, 1241 tons, wheat to Cork, U. K., Havre or Antwerp; 35s. Ship Ericsson, 1568 tons, redwood lumber to Liverpool, private. Ship Aber Coburn, 1876 tons, wheat to Liverpool direct; 32s 6d Ship Grecian, 1677 tons, wheat to Cork, U. K., Havre or Antwerp, 35s 9d, Havre or Antwerp direct, 33s 3d; Liverpool direct, 32s 6d Br ship Glenlinart, 1530 tons, wheat to Cork, U. K ; private. Br. ship Lord Lytton, 1287 tons, wheat to Cork, U. K., Havre or Antwerp; private. Br. ship Don Enrique, 1312 tons, coal from Nanaimo to this port; private.

Meat Market.

Beef is in fair supply at the prices quoted, but as yet shows no advance, owing to the approaching rainy season Mutton is abundant and weak at quotations. Pork is firm at our figures. Not many hogs have arrived during the past week. Following are rates for whole carcasses from slaughterers to retailers.

BEEF—First quality, 8@9c; second quality, 6½c to 7½c; third quality, 5@6c ₱ lb.

VEAL—Large Calves, 6@7c; small ones, 8@9c ₱ lb.

MUTTON—Wethers are quotable at 5c and Ewes at 4c@4½c ₱ lb, according to quality.

LAMB—Spring is quotable at 6c ₱ lb.

PORK—Live Hogs, 5¾@5¾c for heavy packing and 5c@5¾c for light hogs; dressed do, 7¼@7¾ ₱ lb for hard grain hogs.

PORT OF SAN FRANCISCO.

Exports.

Principal Exports by Sea for the week ending November 7th.

Eastern-Rosendale, in round lots	$2 20	2 15
English choice brands, in round lots	3 37½	3 15
English outside brands, in round lots	3 25	3 00

CANNED GOODS, ETC.—

The only item worthy of note in the Canned Goods market is the condition of Tomatoes. They are way off. The market is collapsed, and they have sold as low as $1 05. The pack here is larger than anticipated, and Eastern Tomatoes have been so low that some have been imported to compete with the home article.

We quote California assorted Table fruits, 2½ lb cans, $2 65 ₩ doz, do 2 lb cans, $2 00 ₩ doz; do gallons Table fruits, $9 00 ₩ doz. Pie fruits, $5 00. Tomatoes, 2½ lb cans, $1 05 ₩ doz. Jellies, $2 75 ₩ doz. Pears, $2 75 ₩ doz. Peck lbs in 5 gallon kegs, $14. California Nancy pints, $3 50; ½ pts, $1 75 ₩ doz. Ketchup, $1 25@1 75 ₩ doz. English Groceries—Crosse & Blackwell's pickles, pts, $4 qts, $7 75. Olives, qts, $7; Lucca, Professor (P), Salmon, $9 00 ₩ case. Jams, $4 00. Eisen, Wetmore; Fry's Chocolate, 50c ₩ lb; Cobbin's Cocoa, 50c ₩ lb. Keen's Mustard, 60c ₩ lb. Others, among the list of everything.

Changes to note this week; trade has run, not from any changes in prices; the retail trade has been increased, caused by a few days cold and wet weather.

The manner in which retail dealers are wrangling to get a few tons of Wellington Coal now discharging, would evidence that all their former stock was disposed of. The Australian mail of last week refers to the light tonnage loading for this port, and to scarce vessels for San Francisco a marked advance would have to be paid over the then quoted rates.

Several landed tons Anthracite coal was sold this week for steam purposes, a few more such sales would materially increase the value of the unsold Anthracite coal here, at present there are full stocks here in yard.

Importers prices of coal, Foreign and American, to arrive: Australian, $7 75@8, Liverpool Steam, $7 50@7 75, West Hartley, $8@8 25, Scotch gas, $7 75@8, Cardiff Steam, $7@7 25, Lump Lehigh, $13@13 25, Egg Hard, $10@10 50, Cumberland, bulk, $10@10 50, spot prices are as follows: Australian, $9 00, Liverpool Steam, $7 50, West Hartley, $8@8, Scotch Splint, $8 50, Cardiff, $7 50, Lehigh Lump, @$13, Cumberland, bulk, 11 50, Egg Hard, $11.00.

EX-SHIP AND YARD.

do do sks		16 00
Australian Shale		20 00

COFFEE

Coffee continues in fair demand for home consumption and shipment East.

We quote: Mild grades on quotations except for prime Costa Rica, which is held at 14c.

We quote: Prime Guatemala, 13@13½c; Costa Rica, 13@14c, Good Salvador, 13c; O G Java, @29c.

CORDAGE—

We now quote as follows: Manila, 1½-inch (7-16 dia) and upward, 17c; do, 12 thread (⅜ dia) 17½c, do, 6 and 9 thread (¼ and 5-16 dia), 18c; Manila Hale Rope, 2 and 4 thread, 17c; Manila Combination tarred, 2 in (⅝dia) and upward, 17c; do Lathyarn, 17c. Discount on lots of 10,000 lbs, 1c ₩ lb. Sisal Rope, 1½-in (7-16 dia) and upward, 15c; do 12-thread (⅜ dia), 13½c; do 6 and 9-thread (¼ and 5-16 dia), 14c. Sisal Bale Rope, 3 and 4-thread, 13c.

DRIED FRUITS—

There is nothing new in Dried Fruits. Eastern orders are coming in and being filled at quotations. The market is firm.

DRUGS AND CHEMICALS—

We quote Nitric Acid, 12c. Strong Sulphuric Acid 30@32c; Sulphuric Acid, 2½c; Muriatic Acid 4½c (all lots of 20 carboys or more). Caustic Soda, 60 degs per 70 deg, 4¾@5c; 76 deg, 6½@5½c; Powdered Caustic Soda, 7c@c. Caustic Potash, 9½@10½c. Chlorate of Potash, 16@18c; Soda Ash, 2½@3c. Soda Crystals, 1¾c.

We quote at ship's side: Soda Ash, 1 100@2½c to 52 deg; Soda Crystals, 1¼@1¾c; Chloride Lime, 2½@2¾c. Copperas, 1½c on spot, Caustic Soda, 60 per cent, 5c.

DRY GOODS—

FISH—

We quote: Columbia River, $1 20; Sacramento, $1 10; f. o. b.; hards $1 00. Bf barrels, $7 50. California Cod, 50-lb bundles, 5c, selected, in cases, 6c; boneless, 7c.

The salmon market is in about the same condition as last week. There is no change either in the situation or prices.

G. & B POWDER—

California Blasting is quotable at $3 25 ₩ keg; Dupont Blasting, iron kegs, $3; Hazard do do, $3 25, Hazard K R F, in canisters, 50c lb; do do Electra, $4; do do Superba Sport, 75c; Dupont Sporting—Golden Pheasant, kegs F, FF and FFF, $5 50; ½-kegs, $3 00; ¼-kegs, $1 75, Superior Rifle, kegs, Fg, FFg, FFFg, $7 00; ½-kegs, $3 75; ¼-kegs, $2 25. English Duck, kegs, Nos 1, 2 and 3, $14; ½-kegs, $7 50; ¼-kegs, $4 00, Diamond Gram, 5 lb cans, Nos 1, 2 and 3, $4 75; 1-lb canisters, $1 00. Winchester Metallic Cartridges, rim fire, according to brand on $2 50 to $16 00 ₩ 1000; centre fire, according to brand, from $8 50 to $35 ₩ 1000; U S Cartridges $100 ₩ 1 000.

IRON—

The remarks of last week may safely be repeated, there is next to nothing doing in Pig Iron. Some few parcels which were on the market have been withdrawn, and placed in warehouse and the asking price on same has been advanced, and will be held until such time as buyers appear.

The quotations for loading Foreign Iron are maintained, caused by the high rates asked by vessels coming to San Francisco; in view of present grain freights outward, vessels should receive increased rates inward.

Importers prices of Pig Iron, Foreign and American, to arrive: Shotts No. 1, $27½@—; Carnbroe Scotch, $26 50@—; Eglinton, $25 00, Clay Lane—White, $23 50; American, Eastern soft, $28 00; Spot prices are as follows: Glengarnock, $25 50, Eglinton, $24 50, Clay Lane, white, $25@; Shotts No 1, $28 50, American, Soft Eastern $30. Clipper Gap Nos. 1 to 4 $32 50@35 00.

Black Sheet Iron—Nos 14 to 16, 5c ₩ lb; Nos 18 @20, 5½c; Nos 22 to 24, 6c; Nos 25, 6½c; Nos 27, 6¾c; No 28, 6¾; Galvanized Charcoal Sheet Iron, Nos 10 to 20, 10c ₩ lb; Nos 22 to 24, 11c, No. 26, 12; No. 27, 12½; No. 28, 13½; second quality 1c ₩ lb less than first.

Wrought Iron Pipe, discount, 15@50; Manufacturers' List, per ft, Black—½ inch, 12 lbs ₩ 100 ft, 8c, ¾ do 16 do, 10c, 1 do 24c, 1¼ do 34, 1½ do, 42c; 2 do 167 lbs, 10c; pipe, 222 lbs, 27c; 1½, 270 lbs, 33c; 2, 367 lbs, 46c, 2½, 576 lbs, 77c; 3, 755 lbs, 95c; 3½, 905 lbs, $1 25; 4, 1072 lbs, $1 00 Galvanized—¼, 11c; ⅜, 12c; ½, 16c; ¾, 19c; 1, 22.

WINES—

For remarks see Wine Department.

Hudson River Wine.

The New York *Maritime Register* of Oct. 30th says:

The matter of wine making along the Hudson river, where there are many large vineyards, has not received much attention up to the present time. But the large grape crop this season, together with the fact that Canada is buying largely of our grapes here to make into wine, has brought the question of wine-making on the Hudson prominently forward with the result that this business will probably be started soon upon a large scale. Experiments, it is stated, have proved that the wine made along that rives compares favorably with the California product. If this is so it will open a new and profitable industry in this section and add considerably to the value of land along the river suitable for grape culture.

The *Register* means well but does not understand that European grapes, vinifera, will not ripen on the Atlantic coast whereas our California vineyards are being stocked with the finest varieties from France and Germany. Wine such as California makes cannot be produced without pure grapes—but an imitation can be made from the fruit of American vines by sweetening, flavoring and coloring. The editor of the *Wine and Fruit Grower* speaking of the wine makers of the Hudson says, with one exception they all use elderberries largely. In this State we do not use or need sugar, flavoring or coloring matters, to make wine that given age and attention will compare favorably with all but the most costly and rarest production of France and Germany.

In another column will be found an advertisement of vine cuttings from the now famous model vineyard of Robert Barton, near Fresno City. The varieties embrace such popular foreign vines as the Zinfandel, Charbono, Riesling, Blaue Elba, Malvoisie, Berger, Muscatelle, Blanco, and many others. This vineyard, under the skilful management of Eugene Morel, has yielded wines of remarkable excellence this season; no more satisfactory evidence of the quality of the stock and healthy condition of the vines can be asked.

Judge Ranney, of Florence, Los Angeles, has presented to the Los Angeles *Times* a mammoth muscat grape. It is one and one half inches in diameter, or four and one half in circumference.

A. D. BELL..... Editor.

FRIDAY.....NOVEMBER 9, 1883.

Morris Ranger, the broken broker of Liverpool, had engaged to deliver this month $750,000,000 worth of cotton. He failed ten days too soon. If he had won on his big gamble he would have been one of the richest men of the day.

Those who are interested in olives and olive planting should send for the MERCHANT of November 2d, which contains article No. 1 by Mr. Pohndorff on this topic, and without reading which article 2 in this issue cannot be fully understood.

We have considerable call for Rixford's book, "The Wine Press and Cellar," bound in cloth, price $1.50. Those who have not obtained it should send us a P. O. order for the amount, and we will mail it free. Or to any one sending in the names of two new annual subscribers for the MERCHANT, with six dollars, we will send the book free.

The completion within the last five years of such monster merchantmen as the Gallia, the Arizona, the Orient, the Servia, the Alaska, the Austral, the City of Rome and the Aurania constitute an epoch in the history of ship-building and marine engineering, and bid fair to lead to a period when, according to a well-known Clyde ship-builder, "we shall see steamers of 800 feet long, the ferryboats of two oceans, with America for their central station, and Europe and Asia for their working termini." Thirteen years ago, vessels exceeding 400 feet in length were not afloat, with one very notable exception; now there is scarcely a merchant fleet which does not include one or two vessels over 400 feet long, and, at the rate at which the length of vessels is increasing, it will soon be no boast that ships of 600 feet are in active service. In addition to the change in the size of ships, important modifications in their types and structural arrangements have, during recent years, been effected.

Mr. Pohndorff in a private letter writes in reference to his pleasant labors in procuring the best kinds of olives for the foremost leaders in improving our productions that he has undertaken the task of procuring for California what posterity will appreciate, not for his own profit, for in the orders he sent to Spain on behalf of Prof. Hilgard he would take no commission, but as some requital for the kindness and hospitality he has received in this State. He informs us also that Prof. Hilgard takes upon himself personally the expense of bringing out the collection of olives for the University of California, as it would be difficult for the professor to get an appropriation even for so trivial an amount, though the results will be so valuable.

The Mexican Reciprocity Treaty.

We publish in another column an article based on the report of General Sutton U. S. Consul General at Matamoras, on the effect of the proposed Mexican treaty of reciprocity on the revenues of the two countries, should Congress assent. On the showing made, *Bradstreet* gives its powerful aid to the friends of the treaty. We think *Bradstreet's* wrong however in ascribing the opposition to, or want of warmth in the support of this treaty, to selfish interests. Louisiana had certainly a right to some assurance that this treaty would not cripple her most important interest, sugar production. The figures and statements given in the article referred to, that while the United States imports 39½ pounds of raw sugar annually to each inhabitant, only 1-10 of one per cent of this comes from Mexico and that for valid reasons stated the increase of sugar growing in Mexico must be slow, disposes of Louisiana's objections. On this side we were never alarmed least Mexican sugars should overwhelm the market. The Hawaiians have not, and as the population of the coast is rapidly increasing both by reproduction and immigration, probably never will be able to supply all we consume; and with a fair reciprocity treaty we would rather draw the balance from Mexico or Central America, than from China or from Manila. The objections from this coast have not been based on the future of either sugar or tobacco. We have not objected that the schedule of free imports from Mexico was too broad but that the schedule of American merchandise to enter Mexico free was too narrow. All textile fabrics are omitted, indeed everything appertaining to clothing from head to foot gear; all manufactures of wood for house building or furnishing, window glass, mirrors, table and ornamental glass, crockery and such ware; every thing relating to food except vegetables and fruits. How important this last omission is plainly seen. Surely the American Commissioners might have prevailed on their Mexican colleagues to admit some of the following: Refined sugars, syrups, rice, starch, farinaceous preparations, spices and condiments, preserved, dried and canned meats, fish, fruits and vegetables, lard, fancy groceries, candies, baking powders, tallow, soaps, candles, general hardware, wood ware and native wines. All these it could not be expected the Mexicans could admit free, but some might have been selected when we stand ready to give them tobacco and sugar. We shall not oppose the treaty in its present form, but we can hardly be expected to give a very warm support to legislation which will of our local industries, chiefly and almost exclusively benefit our petroleum and carriage building interests, and in a lesser degree, our machinists, while the concessions made in return are so important. In return for sugar and rice the Hawaiian's give us half of all the articles they consume or use. Free sugar and tobacco from Mexico ought to bring us in return as broad a schedule of free goods in Mexican ports as the little Hawaiian Kingdom gives us.

We cannot help reiterating the importance of California olive growers making themselves thoroughly acquainted with the peculiarities of the several kinds of olives, and planting only those which are most suitable for our soils and best adapted for the purpose for which it is expected to use the fruit. To plant blindly is to run a terrible risk.

That these certificated Chinese are merchants? Bah!

That a $5,000 policy on a $3,000 house is very likely to cause an accidental fire.

That there's Butler. What are you going to do about him? He cannot be buried until he is dead.

That a woman who earns seven dollars a week should not give more than ten dollars at a time to Peter's Pence.

That we have got Gray convicted, but will our Supreme Court oblige us by permitting him to stay convicted?

That Cincinnati in selling coffins to the South, is burying the red shirt and old animosities.

That it is not true that Sherman's horses are to be sold on the attachment of the man who furnished saw dust for the "ring."

That O'Donovan Rosa can blow louder than a Point Lobos syren and lie faster than a third-class hotel runner on the Oakland boat.

That the Democratic party will do well to ponder over the disasters of Tuesday and examine whether some of the causes cannot be traced to the acts of Democrats in office.

That the funniest joker in the world can not make an old proof reader laugh, or the most pathetic writer raise a lump in the copy holder's throat.

That every man, woman and child in the country should plant one or more tree, this season, and the large land owners should plant hundreds of acres.

That Russia wants 200,000 American repeating rifles, but why go to London to buy them. John Skinker would have filled the order.

That the Mexican Central Railroad has settled one thing, That is: that on the so-called deserts, artesian wells will bring water to within a few feet of the surface.

That Villard should have waited until his road was paying expenses before he built a house to rival Vanderbilt's. It does not look well for a railroad president to grow so rich while stockholders are growing poor.

That De Brazza, the African explorer, is dead; that De Brazza is not dead; that it was De Brazza's brother that died; that De Brazza's brother is very much alive—*vide* Associated Press of California.

That blind Sala, George Augustus, is going to see the sights in the West Indies. If his eyes are no better than when he was here, his book about the British Niggers "will astonish the Browns."

That the ordinary insurance broker is not an unmixed good either to the insuring public or to the underwriters. There are brokers who are competent and conscientious men; there are others who are a nuisance and an incubus all around.

That the grafted nectarine in some countries is blossoming prematurely. We would suggest as a preventative, hanging an *Alta Almanac* on each tree. Col. Hollister should see to it that his trees are kept informed on the procession of seasons.

That the difference in cost between a British vessel and an American is not the sole or chief cause of the decline of American shipping, the useless restrictions and other burdens laid upon deep sea ships have more to do with it.

That the *Maritime Register* says color blindness in officers and crews accounts for a good deal of the "tall swearing" on investigations into causes of disaster's. According to the *Register* a large number of the accidents at sea are due to defective eyesight in officers, pilots and watch.

That should Henry Irving and Ellen Terry play in San Francisco, the only audience would be the Floods, Crockers, Haggins, Tevises and a few others, no one else could afford the price of admission, unless it were the family of the man who has the monopoly of saw dust.

That it is said the recent discoveries by which six or sixty messages can be sent at one time over one wire will cheapen telegraphing. Absurd to expect it. Gould cannot afford it. The cost of building or maintaining wires has little to do with the charges for messages.

That the only complaint against the Hawaiians which Moncure D. Conway makes in his letter to the *Chronicle* is that the inhabitants shut up shop on Sunday and go to church, to the great disgust of irreligious travelers. On this ground, let the treaty be abrogated at once.

That three independent short line railroads are in contemplation in this State. Oroville and Big Meadows, Napa and Berryessa Valleys and Rockhn and Georgetown. The first will divert the Susanville trade from Reno, the second will draw much Lake County traffic and the last will bring into culture the wonderful fruit lands known as the Georgetown Divide.

That the American hog has been abused and his condition condemned by those envious Germans who thought that the fine porker from the New World was being received too heartily in the German land. But from all reports it is evident the German hog should be condemned and not his transatlantic cousin. Trichinae is now found among the domestic hogs in Germany. Our own hog may yet be welcomed again in Germany.

That the old leviathan, alias Great Eastern, will be nearly approached in dimensions and excelled in power by two steamers about to be built by John Elder & Co., of Glasgow, for the Cunard Company. They will be each 8,000 tons burthen and 13,000 horse power. Time has shown that unfortunate Scott Russell's theory of large vessels and corresponding power was correct, but he failed miserably in carrying it into practice.

A. W. Kelly, a young man well-known in newspaper circles in this city, is now, we understand, in Liverpool, Eng., seeking employment in his profession. Young Kelly while here was one of the brightest young fellows of his age. He had from residence among our Spanish neighbors a good acquaintance with the political affairs, material condition and commercial prospects of Mexico and Central America. He had also what was of more importance, a peculiar aptitude for writing on commercial subjects and was a frequent and valued contributor to the editorial and news columns of the MERCHANT. In England he would be a great acquisition to the staff of any journal that may have to treat of Pacific Coast questions. He will, moreover, when he returns, should he eventually do so, be invaluable to the press of this city from his broader knowledge and experience acquired by travel in foreign countries.

RETAILERS' CORNER.

The week has been an uneventful one in all lines. We are now just between the fall and holiday trade, and as a consequence we have the natural dullness. The foreign trade, however, makes up for the absence of any large local trade, as the exports of the week in all directions have been very large. The changes in values have been unimportant, the decline in Nails being the only one worthy of note.

SUGAR.

The demand for refined has been good during the week, but there has been nothing doing at all in grocery grades. The New York market has been steady and fairly active at unchanged rates. The Louisiana Sugar Planters' Association has received reports from all the sugar-producing parishes, which show a falling off of about 33 per cent. on last year's crop, although there has been an increase of acreage. The canes, however, are small and hard, and where already rolled the juice has been found to be rich, clarification is easy, and evaporation rapid. The best calculations are a product of 160,000 hhds., though this result is contingent upon the most favorable conditions, as an excess of rain following the prolonged drouth and succeeded by an early frost will be likely to seriously injure the crop. The stocks of raw sugars in first hands at New York and other points are light, the receipts being smaller than usual, but refiners' stocks in bond at New York are comparatively full, amounting to about 19,000 tons.

COFFEE.

There has been a fair demand during the week for Coffee, both for home consumption and shipment East. There are no changes in prices, except in prime Costa Rica, which is held a half cent higher. The Eastern market still continues to hold its own at from $12\frac{1}{4}$@$12\frac{1}{2}$c. Rio quotations still continue above the parity of New York, but Coffee can be bought in Europe cheaper than in Brazil, and several cargoes have been bought in that market at a profitable margin. The stock of available Coffee in Europe is over 5,000,000 bags, the French and English having bought largely early in the season when the United States was buying very sparingly, so that they are now in a condition to sell to American purchasers. Cable advices from Rio indicate a higher market there, quotations showing an advance of fully 300 reis since last week, or about $\frac{1}{4}$@$\frac{3}{8}$ cents, while Exchange is also higher. The receipts last week averaged 15,000 bags, which is not large for this season of the year, but the purchases are moderate, so that stocks are increasing.

RICE.

Mixed is still on the downward path and prices are to-day abnormally low. There is a very good jobbing demand both for this variety and No. 1 China. The bulk of the Hawaiian still continues to go East. The Eastern market for Rice is now well under control as the New Orleans Rice mills are only turning out half of their capacity and stocks are becoming reduced.

CANNED GOODS.

There has been quite a break in Tomatoes since our last prices, are badly demoralized. Though in small lots the same prices are asked as two weeks ago yet in large lots the reduction is twenty cents a dozen. Of course we cannot say what the pack is but we know that it is larger than was anticipated and packing still continues. Another cause of the decline was the abnormally low prices of tomatoes in the East, which allowed them to be shipped to this coast and sold in competition with the home article. In fruits there is nothing specially worthy of mention. Stocks are very much reduced and we will soon see importations of Eastern goods to fill the place of stocks entirely exhausted. The Eastern demand continues steady at unchanged prices. There is nothing worthy of note in the Salmon market. Sales continue steady at unchanged rates.

DRIED FRUITS.

The crop of Dried Fruits this year has about all been marketed, and as far as we can learn, for the bulk of it is in a few hands who are interested in making the stocks appear small, the pack has been light this year though of good quality. There has been no special improvement in the means of preparing it for market, but the fruit itself is better. Peaches are firm and high with a good demand both local and Eastern.

The Codfish Catch of 1883.

The catch of Pacific cod fish has been unprecedently large this year, and all fears of such a dearth as occurred last spring and early summer are removed. The market last year could have consumed nearly 500 tons of fish more than we had; this year we have apparently more than enough. Moreover, fish are abnormally low on the Atlantic side, and lots are coming here and being sold at prices that compete with the home article. These Eastern fish cannot, however, claim any superiority over our Chaunnagan and Ockotsh sorts when the latter are cured by our most experienced firms.

THE PACIFIC CATCH OF 1883.

Glencoe, Ochotsh Sea		90,000
Czar (to arrive, estimated) Ch. Isls		60,000
Total..		1,743,000

In 1882 the catch was 1,241,000 fish. Reduced to tons, this gives about 2,981 tons for the catch of 1883, or an excess of nearly 1,100 tons over last year. The average size of the fish is larger this year than the last, and in every respect a superior article. The outsiders who entered the business this year have helped to demoralize the market. Not being able to sell their cargoes, they have undertaken to cure their fish on their own account. Prices from the causes named are broken, with a prospect of lower quotations. The probability is that unless the demand increases, there will this year be a considerable surplus instead of a bare market at the close of the season.

J. Shanks & Co's, Dublin Ginger Ale, T. W. Jackson & Co., of this city, agents, is a superior article and one which we can honestly recommend to those who desire a wholesome delicious non-intoxicating beverage. It mixes well with still wines, beer or spirits. In quality it is fully equal to Cantrell & Cochrane's well-known brand, and is sold at a price that brings it within the reach of all.

DEATHS.—James S. Cluff, senior member of the firm of Cluff Bros., one of the largest retail grocery houses in this city, having several establishments, died on Tuesday morning of congestion of the stomach and liver. His funeral took place from the Masonic Temple and was very largely attended.

That Bismarck desires to prevent Germans emmigrating to America because he wants the stalwart young men for common food. The Catholic church wants to prevent emigration to America from Ireland because it fears the sheep may wander from the fold.

That one of our merchants as a reason for the decline of American shipping, said that our sailors received high wages and were fed on mince pie. Yes! but too often the pie is seasoned with oaths and digestion stimulated by liberal use of a bowying pin

Trade Failures.

There were 200 failures in the United States reported to *Bradstreet's* during the week ending Oct 27th, 29 more than the preceding week, 72 more than the corresponding week of 1882 and 92 more than the same week of 1881. Compared with the previous week the middle states had an increase of 14; New England states 24, a decrease of 1, southern states 33, a increase of 9; western states 58, an decrease of 13, Pacific states and territories 36, a increase of 20, Canada 30, a decrease of 1. Among the firms reported embarrassed were Benjamin L. Coffin, wholesale hosiery, and S. L. Merchant & Co., importers of cements, New York city; Maule Brothers & Co., lumber, Evert P. Maule & Co., leather, John W. Smith & Co., manufacturers of doors, etc., and Stern, Troutman & Co., wholesale hats, Philadelphia; Ely, Hurlbut & Co., wholesale hat and furs, Chicago; John Campbell, iron, Ironton, Ohio, John N. Glidden, iron, Cleveland, and the Arnold Furnace Company, Niles, Ohio. In the principal trades there are as follows: General traders 32, grocers 29, liquors 19, hardware 11, clothing 11, carriages 8, drugs 7, manufacturers 7, shoes 7, dry goods 6, grain, flour, etc., 6, hotels and restaurants 5, hardware 5, fancy goods 4, furniture 4, iron 4, hats 3, jewelry 3, produce 3, lumber 3, stationers 3, leather 2, stock brokers 2, bakers and confectioners 2, coal 2, tobacco and cigars 2.

Spirit of the New York Markets.

NEW YORK, Oct. 31st.—There has been an absence of activity in the general markets and prices, with limited exceptions, remain steady. As the Winter approaches there is an increased demand for certain lines of goods, but the height of the season has passed, and gradual decrease in the distribution of general merchandise during the remainder of the season is probable, but as dealers have been obliged to buy to a system of close buying and short credits, it is probable that more orders will be duplicated before the season finally closes than usual. The activity in bank clearings last week has caused a gain in the bank clearing house exchanges of this city of 5.6 per cent. over those of the corresponding period last year, the returns from twenty five other leading cities of the country showing a falling off of last year. The exhibit denotes an improvement in trade, as many of the cities which for months past had shown a decrease in clearings are now showing the same to assume a gain. Boston showing an increase of 5 per cent., Philadelphia 27.7 per cent., Chicago 3.1 per cent., Baltimore 6.1 per cent., Cincinnati 14.6 per cent., Louisville 10.5 per cent., Providence 24.5 per cent., Cleveland 8 per cent., Memphis 24.2 per cent., Syracuse 4.5 per cent., and Lowell 25.9 per cent. The Grain markets have developed a firmer tone. The leading staples of Flour, Corn and Oats are also Hog products, Spot Cotton is steady and in lures easier. Wool is quiet and steady. Refined Petroleum is inactive and Crude Certificates are a trifle lower, and prices favor buyers. Tobacco is firm and moderately active. Spirits Turpentine has further declined, and Rosin is inactive. Hops are steady, and choice firm with a good export demand. Drugs and Dyes are quiet with no appreciable change in prices, if we except a continued advance in Arabic Gums. Currants, Turkish Prunes and Valencia Raisins are the turn cheaper. Raw Sugar is dull and nominal. Refined is easier. Molasses is unchanged. Coffee is quiet but firmly held. Tea is slow of sale and easier. Rice is dull. Spices are quiet. Fig. Iron is dull and prices favor buyers. Tin is steady. Lead is lower. Copper is flat and nominal. Ocean Freights are dull and rates for Petroleum tend downward.—*Shipping List.*

TOBACCO MARKETS.

SAN FRANCISCO.—The leaf trade has been decidedly quiet during the past week. The only kind for which there has been much inquiry, has been '81 Sumatra. Transactions have taken place at $1.60 to $1 75 and a lot of choice 32 has been also sold at the latter figure. There has been also some inquiry for Havana Wrappers, but the stock is light. A few lots of good Havana would meet with ready sale.

Seed leaf is uniformly quiet; it is too early yet for those manufacturers who are using '82, to pronounce any opinion beyond that very favorable one expressed on examination of the samples, and which we have already published in the MERCHANT.

The cigar trade we learn from manufacturers is moderately active, but the scarcity of labor continues to be felt and is even increasing. The effect is chiefly seen in low priced cigars. Those formerly ranging between $11 and $20 per thousand have advanced from $1 to $1 50 probably, ten per cent of our Chinese makers have left us within the last three or four months, which makes the remainder very independent. Some of the smaller factories have gone out of business in consequence. This dearth of labor is however probably temporary, as these Chinamen have all taken out certificates, and probably will get through the Chinese holiday and return after enjoying the New Year festivities in China.

Business in manufactured tobacco, has been dull after a quiet autumn and during the rains of the last two days there has been hardly anything doing. Speaking generally the season has been slow and profits unsatisfactory. At the time of the reduction of the tax in May, a little gain was made but through business competition that was gradually lost.

The recent attempt to advance slightly has been fairly successful where said rates are followed, but other wise it is difficult to get any advance. Our large houses complain that some manufacturers even those who from the volume of their business ought to be above such means of disposing of their goods, are drumming large retailers in the interior towns and selling lots of five to ten butts of plug, and delivering them direct from the factory. It can hardly be expected that the heaviest wholesale tobacco houses, carrying ordinarily stocks of a value unknown in other states, and making their principal business with wholesale jobbing grocery houses, who again deport on those very retailers for their business, will look with favor on this movement.

[U. S. Tobacco Journal.]

NEW YORK, Oct 27th.—Very quiet it was in the market, much to the satisfaction of packers. For them a quiet fall and winter means cheap purchases in the country. This declaration is not apt to be kept secret this season. Outside of packers of '82 Connecticut native seed, all others have made money, and will make money. The '82 was bought low, whatever has been sold of it so far has been sold at very profitable rates, and whatever is held, barring low and common packings, will realize handsome profits. It is but natural, therefore, that growers will ask and do ask more money for their '83 crops, and if they have something good they will get it. The main searches for '83 tobaccos by packers now are for Havana seed. But little more has been grown this year than ever before, and it is safe to predict that in '84 most all tobaccos raised in the United States will be from Havana seed. With the application of still more care and continued experiments these tobaccos will become the best wrapping material grown in the world. But as yet the limited quantity of '82, and even that of '83, permits of the importation of foreign wrappers. Our market has been very little of the '82 in first hands, or even in dealers' hands. Manufacturers secured it early in the season. For fine wrapping material there is little anything in the market but '82 Connecticut Valley seed. Holders of small lots of this are very stiff in their prices, and no really fine packings can to-day be bought short of 21 to 22 cents.

Under these circumstances clean Sumatra assumes an important role in the market, and though a surprising dullness existed for this tobacco during the week, there is no doubt but that heavy transactions and record figures will be reported very shortly.

For export the week existed quite a demand for fine wrappers and fillers. Unfortunately the prices that were off red were not in keeping with the ideas of holders of such goods, and therefore, the desperate thirst for such material remained unquenched.

At the end of the week a sale of 1,000 cs-es of '82 New York state Havana seed is to come in to-day to a factory manufacturer served to lessen the fragility of the market, and a little more buoyancy was noticeable in the reafter.

[Western Tobacco Journal.

CINCINNATTI, Oct 29th.—Saturday was another day in which small offerings was the distinguished feature. The offerings were chiefly Ohio goods, prices for which were good, considering quality. In comparison with the time last year offerings are very meagre, and it is on not be from the fact that there is no demand, as buyers show a disposition to buy freely when they can get what they want offered. The chief difficulty is in the fact that the offerings are in general of a very inferior growth, only suitable for Smokers of the same are rises of Cigar makers. Until a better class of goods come into this market will make little progress. The offerings were decided as follows: Ohio House 25, Mexico House 17, and Miami House 13. At the last two Houses but one rejection was made, the bad season having at the Ohio House. The prices at the Mexico House we give an idea of current values. Lugs 4 00, 4 50, 4 75, 5 00, 5 00, 6 00, 6 00, 6 25, 7 00, 7 00, 7 75, 7 50, 8 00, 8 25, 10 75, 11 00 and 13 00.

We are in receipt of a letter from Hutton Bros., of Los Angeles, agents for Mr. Pellisier, in which, referring to this gentleman's advertisement in the MERCHANT of his unequalled thoroughbred French Merinos, and the notices we have given of the remarkable ram "Woody," which yielded a thirteen months' fleece of the unequalled weight of 62½ pounds, he says that, aided by the MERCHANT they have sold all Mr. Pellisier's rams at good prices, and have orders ahead for next year. Steady advertising in first-class special journals like the MERCHANT pays well.

We want at the moment, perhaps more than anything else in the manufacturing line, one or two first-class mills to spin woolen yarn. If yarns of such kinds as our California wool will economically work into could be bought in this State, we should soon have a number of small mills of from two to ten looms each weaving coatings, cassimeres, dress and other goods that our present mills do not touch. We should also supply our local demand for knitting and zephyr wools for hand and machine work. The surplus stock of yarn would have to be sent East, of course, but if woolen mills there can confine themselves to spinning, and do as well as those that add weaving to spinning, of course we can do so. We ought to be able to do better, for we have the whole of the California clips to select from, and can ship the manufactured article nearly as cheaply as those Eastern mills can transport our raw wool with its grease and dirt.

If the South, having the cotton grown at the mill door, can beat the North in manufacturing, cannot we, with our sheep feeding on the foothills in sight of our valley towns, beat Philadelphia or Watertown in spinning yarn? We were once told that though we could grow wheat in competition with the English farmer, we could not grind it in competition with English millers. Such establishments as Sperry's, the Crown, the Star, the Capitol, the North Star, the Golden Gate and a dozen or more others, working for the British and other foreign markets, prove that it was only want of courage and the knowledge that only experience could give us, that prevented us doing so ten years earlier. When we have had one or two woolen mills, spinning yarn only, running successfully for a couple of years, we shall be wondering why we so long confined ourselves to making a few blankets, cassimeres and flannels for home consumption and shipped all our great wool surplus in its grease and dirt across the continent to be manufactured. And worse than in the wheat and flour case, much of it to be sent back to us.

Men, women and children, we Californians wear more woolens than the same number of people in any State in the Union, because we mostly wear woolen all the year round. And, from the higher earnings of this coast, the multitude, as a rule, dress better than in other States.

American Wool Stocks.

A particularly strong feature of the wool market is the absence of heavy stocks pressing for sale at any point. An inventory of stocks made by an eastern firm a fortnight ago discloses the fact that the available supply of domestic wools is almost unprecedentedly small in the leading markets. Boston stocks are estimated at a little over 11,000,000 pounds, and in Philadelphia a careful computation shows only about 5,000,000 pounds. These statements indicate that an enormous amount of wool has already passed into consumption or into the hands of manufacturers. It is difficult to determine where all the wool that was supposed to have been chipped this year has gone to, as there appears to be no important accumulation at any point in the interior.

The O. S. S. Co. steamer Alameda arrived yesterday from Honolulu, 6 days 19 hours from port to port. Mr. Bishop, the well known banker, was one of the passengers.

Does Fall Shearing Pay?

Upon this subject, as well as in many others relating to sheep husbandry, there is a great difference of opinion. Some argue that an increase of from one to two pounds of wool per head can be realized from shearing in the spring and fall. They admit the staple to be much shorter and that it does not sell for as much as a twelve months' growth by some three cents per pound. If a sheep clips six pounds at twelve months and sells for 20 cents, the income amounts to $1.20. Should the same animal at two shearings turn off eight pounds at 17 cents, it brings $1.36, a difference of 16 cents per head. If the cost of shearing be 5 cents per head, from the first plan the value of the wool is $1.15, while under the latter plan it is 10 cents for shearing, or $1.26 for the wool, per head. To say nothing of the extra worry to the sheep in being handled the second time. Also the risks to be run from flies and screw worms. Then, as a general thing the sheep will put in our judgment a average an increase of two or even one pound more per head. Should there be a yield of about the same number of pounds, the difference in prices between the six and twelve months fleece would show an actual loss of two to three cents per pound. Every wool grower knows that the twelve months fleece of our Merino wool is always more sought after, and consequently more reliable than the shorter growth. The fact that manufacturers urge wool growers to be breed for a *longer* staple of Merino wool, is an argument against fall shearing.

There must be a general demand for fine short wool to ever make it valuable. Greater than any that we now know anything about. In considering this question, we must look at it from another stand-point. In so doing this query naturally arises: Is fall shearing conducive to the health of

sheep? In other words, is not an increased of one to two pounds of wool, grown at an additional tax upon the constitution? Also is the late growth sufficient to cover and protect sheep through the cold rains and mud blizzers of the winter? Many who favor fall shearing, generally pass their breeding ewes by, preferring to shear only the wethers and spring lambs. Why do they adopt this plan? Simply because the ewes are expected to bring lambs in addition to growing wool. Also to insure them all needed covering for winter. Other sheepmen argue that if the winter should happen to be a wet one the fall-shorn animals will dry out sooner and have to carry less actual weight during the continuance of the rainy seasons. This may be very true, still it does not prove that a healthy, fat sheep cannot bear the burden. Under the credit system of buying supplies, or of "being carried" by commission merchants, which used to be more general than at present, fall shearing in very many instances was resorted to in order to raise revenue. The pros and cons were never taken into the count, either for or against the advisability of doing it. A semi-annual income was the sole object to be attained.

Now that experience, though purchased at a terrible cost, has taught the advantage of the cash system in handling sheep, we can leave the *double* revenue out of the question and bring it down to the point from which we started, viz: Does it really pay to shear more than once per year? In answer to which, we *modestly* say "*No.*" This, as we wrote in the outset, is a complicated question, having *two* sides. The *Wool Grower* takes the *negative* of the query; who will champion the affirmative side of it?

THE WOOL MARKET.

The report from the East, which we publish in another item, that stocks of domestic Wool on hand are lower than many thought, and showing that manufacturers must have purchased liberally, accounts for the prices being fairly sustained this year at the figures to which they settled early in the season.

Private telegrams report Wool in New York yesterday quiet. Spring fleece was quoted at 22 to 25c, burry, 10@15; pulled at 28@40c. Fall Wools fleece are quoted at 10@20, and burry and defective at 9 to 10.

In the local market there has been no event of importance this week.

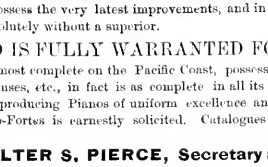
CALIFORNIA
Piano Manufacturing Co.

INCORPORATED UNDER THE LAWS OF CALIFORNIA, MARCH 8, 1882.

Manufacturers of Strictly First Class

UPRIGHT PIANOS.

Factory, 431 and 433 Fourth St., corner of Bryant.
Old Kimball Carriage Factory.



Salesroom, 30 New Montgomery St., under Palace Hotel.

Our instruments possess the very latest improvements, and in TONE, TOUCH and DURABILITY are absolutely without a superior.

EVERY PIANO IS FULLY WARRANTED FOR 5 YEARS.

Our factory is the most complete on the Pacific Coast, possesses every kind of machinery, steam, dry houses, etc., in fact is as complete in all its appointments as any Eastern establishment, producing Pianos of uniform excellence and durability. An examination of our Piano-Fortes is earnestly solicited. Catalogues and full description mailed on application.

WALTER S. PIERCE, Secretary and Agent.

JUSTICE BAKING POWDER.

"Fiat JUSTITIA, Ruat Coelum."

SAN FRANCISCO, June 30th, 1883.

We beg to call your attention to our JUSTICE BAKING POWDER, each can of which we guarantee to be full net weight and to contain nothing but the purest Cream of Tartar and the best English Bi-carbonate of Soda, compounded on the most approved formula.

We make the price as low as it is possible to sell this quality of goods, desiring that the purchasers may feel they are getting value received, ALL IN BAKING POWDER, and that they are not involuntary contributors to extravagant newspaper advertising, or to the placarding of fences, as their intelligence must advise them is too often the case when they buy some other brands. At the same time, *Justice* to the manufacturer, *Justice* to the dealer, *Justice* to the consumer, and last, though not least, *Justice* to ourselves compels us to assert in unmistakable terms that, however *Majestic, Fur-fetched*, or *Sweetly Perfumed* the title by which any other is known, no other, more wholesome, more effective, more economical Baking Powder ever was or can be produced, than that we now offer you.

Justice should be found in every city and town throughout the length and breadth of the land, and we solicit your kind cooperation in our efforts to place it there, feeling confident that the closest investigation and the severest ordeal to which Baking Powders can be subjected will prove its intrinsic merit and fully bear out all we claim for it.

With this introduction we are content to place our *Justice* Baking Powder before the public, and referring you to the accompanying memorandum of prices and style of packages at foot,

We are, very respectfully yours,

TABER, HARKER & CO.

Sorghum and Beet Sugars.

The *Alta* has some remarks on sorghum sugar and incidentally on the immense importance of the cane sugar purchases of the United States as a factor in our commerce and in the financial exchanges of the world. From the information we obtain from time to time through those of our commercial exchanges largely devoted to groceries and published in the Western and Southern States, we have come to a conclusion the very contrary of that given by the *Alta*. We are of opinion that the census of 1880 reports, when completed, will show an increase of production of sorghum, sugar and syrup, in 1880 over 1870 proportionate to that of the latter year over 1860. It is within the last three years, however, that the greatest progress has been made. Science has come to the aid of sorghum sugar makers and many improvements, have resulted. The processes however are still imperfect, and there are many difficulties to be overcome before a fine table sugar can be economically produced from the sorghum cane. Beet sugar is doing better than sorghum, at least in the sense of having surmounted the obstacles which led to such heavy losses to all who invested in these enterprises in earlier days. We learn from Mr. Dyer, president of the Standard Sugar Company of Alvarado, that in October the average product from the beets worked by him was 7.09 per cent. of fine sugar, besides the secondary and tertiary products. This is a clear gain of 1¼ per cent. over the results of earlier years. The experience of the Standard proves that some parts of California are well adapted to the growth of sugar beets, and that under competent management the business will pay liberally. But the secret of success lies in that "competent management"; ignorance, empyricism and extravagance would make a failure of the business again, as it has invariably done in the past. It ought to be a source of gratification to Californians that the first financial success in beet-sugar making in America has been in this State, and it has been made by perseverance and in spite of many failures and many bitter losses. According to the *Alta*, sorghum sugar is doing at least as well in some counties in California as in any State in the Union. The higher prices of sugar, raw and refined, which are obtained on the Pacific Coast, have had much to do in promoting the success of these domestic sugar enterprises—prices such as would rule on the Atlantic Coast, were the duties on foreign raws remitted, would ruin all these infant enterprises; if the duties are maintained, they will gradually grow until home-grown sugars will rule the market, and sugar on this coast will be proportionately as cheap as bread, fruit, salmon, or any of our other food staples. The *Alta* says:

Experiments in the cultivation of sorghum, for the manufacture of syrup, have been recently made in California, in Placer county and elsewhere, with results that are quite gratifying. This gives us a local interest in the great problem of the manufacture of sugar from sorghum syrup, which, after long delays and many disappointments, seems at last to have been practically solved. Even if the sorghum-producing capabilities of this State were out of the question, there would be sufficient reason for taking the liveliest interest in the developments of the sorghum business; because in its national aspects it is of the first importance. The United States is an importer of sugar to the value of $100,000,000 annually, and the amount of revenue collected from sugar imports by the Government has been from $40,000,000 to $50,000,000 every year. Now, should the United States become producer of sugar to the extent of its own needs, the retention of the $100,000,000, which is annually sent out of the country, would change the whole course of commerce, and be an industrial revolution of such magnitude, that it is impossible to foresee more than a small portion of the consequences. But one of the consequences would clearly be the solution of the surplus-revenue problem, without the intervention of Congress.

Sorghum, for the manufacture of syrup, has been grown in the United States a great many years, and the production of syrup increased from 6,000,000 gallons in 1860 to 16,000,000 gallons in 1870. Though the census figures for 1880 have not yet been published, it is believed they will show that the production of syrup had not greatly increased.

"Reclamation" Customers.

Every house doing a large general business has customers who, it is understood beforehand, will make reclamations on every possible opportunity. We find in the Greely-Burnham department of the St. Louis *Grocer* the following on the "Boss Reclamationist:"

"We have lately made the acquaintance of the Boss Reclamationist. We thought we knew something about what could be done by an able-bodied and brainy Deductionist when warmed up to his work, as we have sometimes known some of our customers to be, but we find that we have only commenced to learn. We sold a party a small bill of about $100. He remits with eleven deductions, and among them one for one charge of shot short, in weight of one bag, 10 cents, and a fraction of a pound of cheese short, 10 cents. Wishing to put on record our admiration for the gigantic intellect which evolved from its inner consciousness charges like these, we reprint below our reply to his letter:"

ST LOUIS, October 23.

Mr. ——, *Dear Sir:*—Your letter of September 20th was duly received, and we have been awaiting the return of the peanuts and batting. We have now given you credit for them. We desire to say that, in all our experience of forty-five years, we have never met with anybody who could put so fine a point on reclamations and deductions as yourself. We are lost in admiration of your ability in this direction. To make a deduction for one charge of shot,' and 'one pound of cheese certainly 'takes the cake.' We are very glad to have had an opportunity of making your acquaintance, and to become practically informed as to the exceeding fineness to which matters of reclamation and deduction can be carried by a man who is thoroughly in earnest and who understands the business so completely as you do. We have in our experience known a great many 'Kickers' and Reclamationists, but it is reserved for this late day, for us to make the acquaintance of the champion. We cheerfully and with boundless admiration award you the belt, and while we very much prefer that you should not honor us with further orders, we shall, nevertheless, continue to cherish for you the utmost admiration and respect. We should be glad to continue the acquaintance, provided it involved no business transactions. We like your style, but we would rather have you exercise your talents towards some of our neighbors than on ourselves. With kindest regards we remain, very sincerely, yours,

GREELEY-BURNHAM GROCER CO."

A REMARKABLE FRUIT DISPLAY.

There can be seen at the office of the State Viticultural commissioners, all things considered, the most remarkable fruit display ever made in this or any other country. The fruits are the product of the dry mesa land of San Diego, grown without irrigation, on soil in which to obtain water for domestic use wells must be sunk 60 feet. The assortment consists of seedless oranges, the average circumference of nearly 200 oranges being 10¼ inches, and the extremes 9¾ and 11 inches. The skin is thick, but the contents are all meat. The lemons are also seedless, a variety originated on this land; there are also samples of Sicily. The olives are Mission. Among the citrus fruits are fine citrons. There is a fine bunch of Japan plums, and also the ripe fruit and a bunch in flower of the Japanese persimmon. The apples, too, are unusually fine. A box of raisins is also among the exhibits, and is as fine as any California has yet produced. It is said that oranges and other fruits ripen on these lands two weeks earlier than in Los Angeles; if such is the fact, it gives San Diego an important pecuniary advantage. The extraordinary fact is that these fruits are fully equal to what any of the southern colonies have grown by their costly system of irrigation. This exhibit was personally gathered by Mess. Chas. A. Wetmore and George West on the old Wolfskill ranch. This property, embracing 12,700 acres, nearly all suitable for horticultural cultivation, has been purchased by a company of California capitalists, who, as will be seen by another article, will plant enormous vineyards and orchards, and offer the remainder for sale in lots to suit purchasers. We recommend all who are interested in the progress of California and its fruit enterprises to visit Mr. Wetmore's office, at 111 Leidesdorff street, near California street.

We will mail free, to any person sending us the names of two new subscribers with their subscription money (six dollars) a handsome copy, bound in board and cloth, of

THE WINE PRESS AND THE CELLAR.

BY E. H. RIXFORD.

For press notices see advertisement in another column.

The *Pacific Sentinel*, of Cloverdale, is unnecessarily frightened about over-production of wine. There is less danger of this while our largest new vineyards, as well as small ones, are being planted with the finest varieties foreign grapes, despite the fact that they are often shy bearers. If wine drinking was to become as common in New York, city and State, as it is in San Francisco and California, it would take 20,000,000 gallons a year to meet the demand. And even here in California we have not reached the limit of consumption. Why? Because for the working poorer classes we have never had wine cheap enough and for the rich we have had very little wine good enough. Common wines should be sold cheaper, fine wines should be more plentiful, and we are working now in both directions.

EXCESSIVE VINE PLANTING.

The Cloverdale *Sentinel*, published in a thriving and growing wine district, has a long article on the danger of overdoing the vineyard business. While there is good reason why those contemplating enlarging old vineyards or planting new ones should study the question of marketing, and use judgement and caution in further investments, we think the *Sentinel* draws an unnecessarily gloomy picture of the future. The present condition of affairs, as we understand it, differs in several particulars from the *Sentinel's* statement. The wine production of California in 1882 was barely 11,000,000 gallons, or one and seven-tenths of a pint for every person in the United States. Of that quantity, some 2,500,000 was shipped to the East or foreign ports, possibly 3,500,000 gallons are yet in dealers' hands, but that stock includes all wine of 1881, or previous vintages, they may have on hand. There is some wine in hands of producers who job their own wines, but not a cellar of any importance which ordinarily goes to San Francisco wholesale dealers is now unsold; the enormous balance, nearly equal to two-thirds of the whole annual product of California, has been consumed on this coast, and more than half of that probably in this city of San Francisco. This year we have a short crop of wine, not much over 8,500,000 gallons, if so much. We shall, it appears to us, be absolutely without any stock of wine on January 1st, 1885, if we consume and export in 1884 as we have done in 1883. We will gather the figures into a tabular form:

Stock of wine in hands of San Francisco dealers, of all ages	3,500,000
In hands of producers who job their wines	500,000
Other unsold cellars	50,000
On hand, gallons	4,050,000
Crop of 1883	8,500,000
	12,550,000
Consumption and export from Dec. 1, 1883, to Dec. 1, 1884, on basis of this year	10,000,000
Amount of year-old and other wines on hand Dec. 1, 1884, gals	2,550,000

That is, we shall have a million and one-half gallons less wine in this State on a year than we have to-day, excluding the must of 1884. This is a smaller stock than we have had at the same season for at least three years, and we have a greater demand for one, two and three year-old wine than ever. True, we look for 15,000,000 gallons as the vintage of 1884, and hope for 18,000,000. If we only get the former figure, as the consumption both in this State and on the Atlantic side steadily increases year by year, we shall be left on December, 1885, with as small a stock of ripe wine on hand as we have to-day. If we have a big crop in 1884, still we cannot expect to carry over more than 5,000,000 gallons of wine into 1886, and if we are in the future to gratify the palates of our choicest consumers, we ought to have 10,000,000 and an increasing quantity every year thereafter. The stock of ripe wine, not counting wine less than six months old, in wholesale dealers' hands in this State, whether merchants or producers and merchants, ought to be equal at any time of the year to an average vintage.

That the coarser wines will in future sell at much lower prices than have obtained during the last five or six years, is quite certain, but as those wines are produced from vines which bear heavily, such vineyards will still be very profitable. Though good prices—that is, average prices—may be paid by dealers this year for Mission and Zinfandel, grown on bottom lands, it must be expected that prices, for such wines, will fall after the vintage of 1884. But no one can expect that they can go on for ever reaping $100 an acre profit from vineyards planted before the business was understood.

Too Much Sugar in Grapes.

[Written for the Merchant.]

Among California vintners it seems to be a generally accepted theory that too much saccharine in the grapes makes too heavy wine, and that where nature has so arranged it, the vineyardist can do nothing else than to sit down and deplore his loss. Especially is it so, here in Central California. It has now gone so far that many pretend that no light wines can be produced in localities where the heat or other characteristic conditions tend to sweeten the grapes too much above the accepted standard. Accepting the above theory—which we personally believe to be erroneous—that the vineyardist can do nothing toward lessening the injury which too much sugar causes his wine, the question arises: What can we do toward raising grapes with less sugar? We believe a remedy can and will be found, and, it being a question of some importance to this section of the country, where the summers are long and warm, we think every vine-

SONOMA Co

Sole Agent for California and Pacific Coast.

Orders should be sent to me before the end of December, so that the delivery of the presses may be made before the next crop.

Circulars Sent free of Charge on Demand Application.

yardist should, at least to some extent, experiment in the matter, and not *a priori* accept everything for granted. We can undoubtedly do something, and it may prove practical to employ some of the means already at our command.

In regard to cultivation, we must entirely change our former and present practice of training the vines low on the ground with heads only a few inches to a foot above the surface. Experience has shown that the sweetest grapes are always resting on the ground, and similarly the largest grapes are also found in the same places. For raisin-making the present method of pruning is the correct one, as for this purpose we want the largest and sweetest grapes. Not for the manufacture of light wines we want just the contrary. We want the smallest grapes, so as to obtain as much color and tannin as possible, these products being found in the skins of the berries. We want also as little saccharine as possible, so as to make the wine light and acid. If thus the grapes, with the smallest amount of saccharine, are growing farther away from the ground, I think the means to help nature are near at hand—to train the vines higher, in fact to force them to produce the grapes as high from the ground as possible. And the effect is a very natural one. The higher from the ground the cooler the atmosphere, and, accordingly, the less sweet the grapes. By staking the vines as high as possible from the ground, without unnecessarily shading the pickers too much, this purpose might be accomplished. We now know by experiment that grape vines which have been treated in this way produce grapes of a different character from those on the ground. We understand that Robert Barton is going to have his vines staked. It is a step in the right direction, and it would be well for other vine yardists, with the same object in view, to do the same. By this method four to five per cent. of saccharine could be eliminated from the grapes. How high the stakes should be we cannot decide, but think the higher the better, provided the height does not interfere with picking and pruning.

Another way to prevent the sugar from forming in the berries is by the application of certain chemicals. From the best-root cultivation in Europe we know that the effect on beets of certain chemicals, like Chile saltpeter, is to lessen the sugar in the root, while it stimulates the growth and production. Applied to grapes, this chemical would undoubtedly have the same or a similar effect. Why not then experiment and apply it to our grape vines, increase their production and diminish the saccharine while retaining all other valuable properties? But perhaps the simplest way to produce light wine is to pick the grapes in time, before they are fully or dead ripe. The grapes in Central California attain that certain stage of ripeness when they are especially fit for wine, about one month sooner than in Sonoma, Napa and similar valleys. They call such grapes fully ripe, while we here, spoiled by too much sunshine, call them unripe. Let us understand from the beginning that if we want to produce light wine at all similar to that produced in colder climes, we must also pick our grapes at that very same point of ripeness that northern grapes have attained when they are picked for the press. If this point is properly attended to, we will have no trouble with our light wines. This has been ascertained to a nicety in Europe, and what holds good there will not fail here.

GUSTAV EISEN.

A Raisin Vineyard and Oliveyard.

Mr. C. J. Fox, civil engineer, has left San Diego with George West and Charles A. Wetmore of the Company of San Joaquin county capitalists, who have just purchased the Rancho Rincon del Diablo, to survey the property, which is situated about thirty-five miles northwest of the city, on the most direct line between Santa Ana and San Diego. Mr. Fox was the engineer who some years ago surveyed the then proposed line of railroad from San Diego to Los Angeles. It is their purpose to have the right of way for a railroad laid out through the rancho, as well as the necessary grounds for depot and station purposes. The company intend to plant two thousand acres of the ranch one thousand in raisin grapes, five hundred in olives, and five hundred in other fruit trees. They will plant three hundred acres in vines this winter, and will set out in nurs ry at least a million cuttings. The company comprises among its members a number of the best and most substantial men in San Joaquin county, several of whom contemplate coming down to live on the ranch. There will be from six to seven thousand acres of choice fruit and vine lands to place on the market aside from the land planted by the corporation, and it is proposed to undertake the development of a producing settlement on the plan of Riverside. A great many people will be brought in, and a prosperous and growing colony is looked for in the very near future. If one it becomes important to secure good means of transportation. The present railroad does not run near this fine productive section of the county, and while the early extension of the Southern Pacific from Santa Ana is looked for, it is proposed, as soon as possible, to have a good coach put on the route to run regularly between Santa Ana and this city. We consider this movement to settle and cultivate the Rincon del Diablo and adjacent country one of the most important enterprises ever undertaken in San Diego county, and believe that it will result in the development of a large and prosperous interior settlement.—*San Diego Union.*

Healdsburg Viticultural Society.

At the last monthly meeting of the Healdsburg vinegrowers, R. R. Givens in the chair, Mr. Galloway was invited to deliver an address at the next regular meeting, on "The best method of pruning."

Among the interesting facts mentioned by Mr. Faulhache was this: That from 400 Burger vines, two years old, he gathered 5,935 pounds of grapes. These vines were planted seven feet apart. Mr. Phillips, of Dry Creek, said that he had some vines, ten years old, that yielded from 50 to 80 pounds to the vine. M. C. Bailey reported that those of his vines grown on hill land that once yield d a fine growth of black oak and madrone, did the best. He said that a cane broke also grew on the land, indicating moisture. During the dryest season he could always find moist earth within two or three inches of the surface. Thus hill land slopes to the north and yields better than his valley land.

Mr. Galloway gave an account of his experience with Zinfandel and other foreign vines planted on hill land, all of which was favorable to such lands. P. Ferguson said he had been very happily disappointed in the yield of his vines this year.

A meeting of the inhabitants of Lugonia, San Bernardino county, was held to consider the question of water supply for irrigation. It was finally decided to incorporate a company with a capital of $360,000 divided into 3,600 shares. Each share is supposed to provide water for ten acres of land. The directors are: William R. Tolles, D. A. Shaw, Dr. J. D. B. Stillman, W. G. Hopkins, A. B. Glover, C. P. Barrows and Frank Hinkley.

The Los Angeles *Times* says: "J. B. Crawford, a gentleman who has traveled extensively over the fig-producing countries of Europe and Asia, will shortly plant an extensive fig orchard on his ranch about five miles from town. He will plant only the true Smyrna fig, and believes he can find a good market for all the pressed figs he can make." Of course he can find a good market for all the pressed figs he and a thousand more extensive growers can make, if the quality is right.

Some workmen, while putting up a sign at a Newport store, dropped two of the big letters, both H's, on the pavement. A dozen Newporters immediately exclaimed "How delightfully Englishy."

MAKE YOUR VINEYARDS PERMANENT

RESISTANT VINES THE ONLY SAFETY

I OFFER FOR SALE THE FOLLOWING varieties of vines and cuttings, all grown in the State, fresh and healthy

Riparia, Elvira, Taylor, Clinton, Missouri Riesling and Ehland, Lenoir, Herbemont, Cynthiana, Norton's Virginia.

Also, rooted vines of the following Vinifera varieties:

Zinfandel, Queen Victoria, Chasselas Rose, Black Burgundy, and others.

Price list and circulars sent on application. Address

GEORGE HUSMANN,
Talcoa Vineyards, Napa, Cal

GRAPE CUTTINGS.

THE BARTON VINEYARD

OFFERS FOR SALE AT LOWEST market rates, 50,000 choice foreign varieties grape cuttings, in lots to suit, such as

Zinfandel, Charbono, Riesling, Berger, Blanc Elba, Malvoisie, Muscatella Blanco and many other varieties.

Which will be guaranteed healthy, and in first-class condition. Address

BARTON VINEYARD,
Fresno, Cal

GRAPEVINE

CUTTINGS AND ROOTINGS.

THE FINEST FOREIGN VARIETIES FOR WINES, table use, brandy making, and raisins from the Yerba Buena Vineyard and Nursery, Santa Clara Co. also 50,000 Riparian or phylloxera-proof cuttings, all cuttings are rooted true to name and are passed the vigil ance required to reach before leaving the place. The varieties being scarce and in great demand this season, it is advisable to order early. Apply or address P. O. BURNS, proprietor, box 1195, San Jose, Cal

DISTILLING TO WINE PRODUCERS

A GENTLEMAN WELL KNOWN IN THIS STATE for his experience and success as a brandy distiller desires an engagement for the season. He is well prepared to have terms to be arranged after he has given proof of his capacity.

Learned his business at the distillery of Otard Dupuy & Cie., Cognac.

Address E. C. F., at this office.

"THE WINE PRESS AND THE CELLAR."

A MANUAL FOR THE WINE MAKER AND THE CELLAR MAN

A Few Press Notices.

[PACIFIC RURAL PRESS.]

"Mr. Rixford has made a very careful study and comparison of all means and methods described in the many good French works on wine making, and has prepared a book which is a model of concise style. Very comprehensive in its scope, and still so skillfully condensed that the book is compact and concentrated, which is the secret of success in a manual. Mr. Rixford's book will supply a link which the recent extension of the grape interest has made very great and will do much service in the advancement of the industry in this State."

Letter to the author from E. J. Wickson, Esq., editor of the *Pacific Rural Press* and Secretary of the State Horticultural Society:

"CALIFORNIA STATE HORTICULTURAL SOCIETY,
SECRETARY'S OFFICE.
SAN FRANCISCO, September 29, 1883.

E. H. RIXFORD, Esq.: *Dear Sir*.—I have been much interested in a careful perusal of your manual, "The Wine Press and the Cellar," and am pleased to announce that I find it exceedingly valuable as a source of information on practical wine-making. It seems to me a model of clear statement and intelligent compensation. Certainly there is nothing in the English language which can be at all compared with it as a guide to the most correct and successful practice and to the price of the grape, from the vine to the tun. The publication will be of invaluable benefit to the wine interest of the State.

Very truly yours,
E. J. WICKSON, Secretary.

[S. F. DAILY EVENING BULLETIN.]

"The most timely California book of the season."

It is safe to say that no work adapted to California wine-making and wine keeping, which has yet been published is at all approachable to the volume under consideration. The arrangement, classification, and indexing shows a wonderful amount of care. The indexing is so thorough and the classification so perfect, that the person desiring to consult its pages for any particular information desired, pertaining to the special subjects of which it treats, can readily refer to it.

Dangers of Excessive Vine Planting.

The Cloverdale *Sentinel*, one of the best-posted of the rural journals on the wine business, writes deprecatingly of the excesses into which the rage for vine planting is running. This somewhat lengthy extract from one of its articles is warranted by the importance of the subject: "The wine product of California last year has been estimated as being something under 12,000,000 gallons; and yet cellars supposed to contain good wine remain unsold, and all the larger San Francisco dealers claimed that they were over-stocked and could not handle the quantity produced. Some authorities claim that at the end of the last planting season there was an area of vines in California of about 100,000 acres, most probably a low estimate. No one will deny that vines have been planted more rapidly and far in excess of fruit trees. Yet, at a recent meeting of the horticulturalists, it was stated that only one-eighth of the acreage of vines and fruit trees then planted was then in bearing. Now, taking a somewhat mid-line between the two estimates, we would produce in 1888 over 40,000,000 gallons of wine, and, if all vineyards now planted are worked to bearing, the yield will be even larger. It follows that to avoid the creation of a surplus and the consequent evil of stagnation, the wine-drinking capacity of the United States must increase within the next five years to over five times to what it is at present, for there will be an increased production in the East, not to be overlooked in casting a horoscope. * * * With the first cost and expensive preparation of vineyard land; with the long interim between first investment and first returns; with the cost of labor high, and the impending evil of stringency in the labor market; with the capital, knowledge and experience necessary to successful wine making; with taxes high on vineyard land and a retax on the vines and on their produce; with transportation charges inordinately high; with laws prohibiting the wine maker to use brandy in the legitimate manufacture of sweet wines, without paying a heavy tax; with the probability of a rapidly increased production, we say to the grape grower—go slow! do not plant excessively; do not plant more than you can thoroughly cultivate; and, above all, plant only the best varieties and in the most suitable locations. There is danger ahead, unless blind planting ceases, and ceases at once. If the people of these United States can and do be educated to understand the merits of wine; if so, understanding, King Whiskey is dethroned and the consumption of wine comes, as it should, a national custom, in fact instead of in fancy, then we say there will be no danger of over-production. But until these ifs are surmounted and the doubts banished, great care must be exercised. As we stated last week, the production of really fine wines will never be overdone, since there are so few sections of California capable of producing such. For wines of quantity we have no such favorable expectations. They are doomed to fall, and will bury in their ruins many growers who have invested their all in vineyards where vineyards should never have been.

The Effect of Electricity on Wine and Spirits.

The question of how the action of electricity affects wines and distilled liquors, has been under experiment on the part of chemists and practical connoseurs of the nature and varieties of those liquids for years in France, Germany and Austria. The *Moniteur Vinicole* of Paris published last year an extract in detail of the results of trials made by Mr. P. A. Schmolder, of Frankfort on the Main. The power and duration of each trial on a number of wines and spirits of great diversity were noted. The effects of electrifying at different degrees of intensity, the repetition of equal or augmented or diminished strength and duration, and the careful tasting and analysis after each trial, and convenient intervals of repose of the treated liquids were verified by competent men. As far back as 1872 such efforts to arrive at a decisive conclusion have been made by the ablest technical men in the above named countries. What has been the result? A letter from Mr. Schmolder to Mr. S. P. Connor, of St. Helena, will give the reply in general terms.

Mr. Schmolder says: "Current business occupations absorb too much of my time to allow me to dedicate some of it to a continuation of my experiments with electricity on wines and spirits. The *Moniteur Vinicole* did not publish the whole of the report of my experiences, and placed itself pretty much at a negative standpoint. But the concluding remark of that paper certainly confirms my view of the applicability of electricity to *some* of those liquids, for (a French chemist has come to the same conclusion on the ground of analysis made as Mr. Schmolder), is what the *Moniteur Vinicole* says. My views are, that certain wines, and chiefly such as are of a chemical combination of the common kind of Rhenish wines regarding their moderate alcoholic contents, that of extract and of comparatively high degree of acids can be made durable by the application of electricity. This process is somewhat analogous to that of the heating of wines (a la Pasteur.)

"For each kind of wine the degree of power and duration of the electric process has to be studied, as I have proved by my own experiments. At the same time I hold that it is rank heresy to act upon the rule of applying to all wines the same degree of heat and an equally long time. Many wines headed unduly shown in taste and flavor the effect of a vin cuit. By a too prolonged electrification or letting the current act at an undue degree of intensity the separation of acids that constitute an indispensable ingredient takes place—nay decomposition is the unavoidable consequence.

"The only kind of wine which behaved absolutely negative in my trials was an old good Port from Upper Douro. This wine showed decomposition on the slightest application of a very weak electric current."

Mr. Schmolder, notwithstanding his lack of leisure to prosecute his interesting studies and his disinclination to explore the process commercially, takes a lively interest in scientifically founded trials with electricity on liquids by competent men. Dabbling in such studies without knowing what cleverer men have accomplished before, and who consider the process yet needing the concurrence of many technically versed connoseurs perhaps for years, to establish rules for each kind of liquid, is nonsense, acting unless together with scientists and men of experience. The so-called invention applying electricity to liquors was a short time ago extolled in the daily papers as if it were to have at once become the object of speculation by financiers. Did they know that such a thing as decomposition of necessary ingredients in a fermented or distilled liquid is not the same as rationally diffusing or separating obnoxious ones?

Mr. Connor of St. Helena, who has in obscurity but more intelligently than all but a few persons, studied the question of heating wines and is the inventor of an apparatus that has been triumphantly under trials, and may be the most perfect one in existence, has found and acts upon the truth of the remark made now by Mr. Schmolder, that different wines require different treatment under heat. F. P.

Our correspondent very naturally looks with doubt upon the efforts of Californians, not so thoroughly skilled in science as the leading men of Europe, to obtain practical commercial results from processes in which more learned men have failed. But we have, on the other side, this statement from one of the largest wholsale wine dealers in this city, and at the same time a large wine producer, that he has submitted considerable quantities of wine to the electric process and with satisfactory results. There is of course much to learn, but whether by accident or otherwise the owners of this process have undoubtedly succeeded in removing some obnoxious acids or ether, or both, from both spirits or wine; at least they have done so to the satisfaction of more than one expert of undoubted ability. We are not prepared yet to endorse all that the electric men claim, or to give a final judgment on the merits of the electric process, or even to say that it will stand the test of time, but there is in it something that cannot be justly dismissed by saying it is "nonesense," "a fraud," or "a swindle."

Our Raisin Crop.

We understand that quite a large quantity of raisins which were exposed to the last heavy shower, were ruined for shipment. Some of them were within a day or two of being sufficiently cured. Mc Pherson Brothers will pack five thousand boxes of raisins as the product of their vineyards, and they will purchase about five thousand boxes more, in the sweat boxes and otherwise. In the East prices are advancing, and raisins are now quoted at a good paying figure. It is probable, however, that the bulk of our raisins will be forwarded to San Francisco. Mc Pherson Bros. have two carloads already packed for loading. One of these may be sent to Chicago, and it is probable a second car may be sent. This season's crop of raisins, undoubtedly, will not much exceed that of last year, if it does any at all. Twenty carloads of green grapes shipped eastward and the spoiling of a large quantity by early rains, has materially cut down the estimates made early in the season. It may become absolutely necessary to dry our raisins by artificial means, and thus avoid risk and great loss from inopportune rains, which are likely to occur at any time during the month of October, when an immense quantity of grapes are curing in the sun. It is quite true that the sun-dried raisins are the best, and that the bulk of the crop is always safely cured before the rains come, but driers would save the whole crop, and add many dollars to our income from this source.—*Santa Ana Herald*.

Viticultural Bosh.

Bean's *Pacific Coast Internal Revenue Guide* is a very useful journal for the class for whom, as indicated by its title, it is specially prepared. But it should not open its columns of nonsense. In speaking to the ability shown in the various papers read at the recent State Viticultural Convention it says:

They displayed, as under an electric light, the magnitude of the wine interest of our State. France has been eclipsed, and California has assumed the first place among the grape-growing countries.

California eclipse France? Before we make wine enough to supply a fourth rate town in France or the smallest suburb in Paris?

In Spain even, one wine maker averages in a year more by 50 per cent than all California produces in 1883. Colonel Bean should read up the wine statistics of Europe before he talks of California eclipsing France or any European wine country. We have eclipsed every other state in this Union, true, but then the United States, the Pacific Coast excepted, is not a wine producing country nor is it adapted for the growth of any vines except those cultivated from the wild vines of the forest and their hybrids.

The New French Press.

E. B. Smith of Cordelia, writes to Mr. A. Dubon of Los Guilacos under date Nov. 8th. "I have finished wine making for the season and write to say that "the new French press" received through you has given good satisfaction and I take pleasure in testifying to its merits. The press was found to be very complete, requiring no expense in setting it up, it is very powerful and with the exception that it works slower, is otherwise equal to the most costly hydraulic press. I have made by its aid from four to five gallons more wine, this year than last, from a ton of grapes, and have therefore but little more than one-half the amount of brandy from the wash. Of the more than 90,000 gallons wine I have made there is not one gallon that is not thoroughly fermented. Respectfully, etc.

E. B. Smith.

Herman Schanzlin, of Fulton street, New York, well known in this State as a large buyer of fine California wines and brandies, has purchased the stock and good will of J. Tartier, who has followed the wholesale wine and liquor business in New York for over thirty years with marked success. Mr. Schanzlin, for the accommodation of his increased business, removed last month to larger premises, and is now located at 16 Warren street, New York.

The Third Annual Convention of the Fruit-Growers of California.

The State Board of Horticulture requests those interested in the various branches of Horticulture, and in enterprises dependent thereon, to convene for consideration of their mutual interests during the three days, viz: November 20th, 21st and 22d, 1883. The meeting will be held in San Francisco, at the hall of the Chamber of Commerce, Merchants' Exchange Building, commencing at 11 A. M., Tuesday, the 20th, and closing at noon of the 22d. The Convention will be held under the auspices of the State Board of Horticulture, and met as the guest of the State Horticultural Society. As far as the time will allow, a full and free discussion of the most important matters connected with Fruit-Growing, and its attendant industries, will be invited, the various subjects to be introduced by pertinent essays from a considerable number of those noted in this grand work of the State. A most instructive and interesting meeting is expected, and in order to realize its fullest expectation, a cordial response is needed, not alone in the preparation of papers, but in personal attendance upon the sessions of the Convention. Communications concerning the work of the Convention may be addressed to S. F. Chapin, State Inspector of Fruit Pests, Box 996, San Jose.

Professor Husmann offers for sale rooted vines and cuttings of the leading American varieties, such as Riparia, Elvira, Taylor, Clinton, Lenoir, etc.; also rooted Vinifera varieties, Zinfandel, Black Burgundy, Chasselas Rose, etc. Circulars can be had by addressing Professor Husmann, Napa, Cal.

That prohibition in Maine does not prohibit, and no truthful man or woman who knows anything about Maine will say it does.

It is a curious fact, says some entomologist, that it is the female mosquito which torments us. A bachelor thinks that it is not at all curious.

THE WINE MARKET.

[For Exports and Imports, see Merchandise Market.]

There is nothing new to say about wine. The vintage is over and we have a little more, probably than 8,000,000 gallons of wine: all of it is good and the best is better than we have ever made in California.

PRODUCE MARKET.

The Imports and Exports given below are up to Wednesday evening.

FLOUR—

Imports, 1545 bbls. Exports, 51010 bbls.

Receipts of week, 186351 qr sks.

During the week prices have been advanced to keep pace with the enhancement in value of wheat. The quotations given are for small parcels to retail dealers, and for a round lot for export, figures could be materially shaded:

Extra, $5 02½@5 87½; superfine, $4 00@4 62½; Oregon, $4 45@4 90; Interior Extra $4 90@5 37½; per bbl for jobbing parcels.

WHEAT—

Imports, 1807 sks. Exports, 454214 ctls.

Receipts for the week, 401385 ctls.

It is generally conceded that the stock on hand in this market is as great as was anticipated, and with exceptionally low rates for freight, and a continuously improved feeling in the Eastern and European markets, holders here are very firm, while the speculative element shows increased desire to become possessed of contracts for future delivery. This results in an advance in figures and a very firm feeling on the part of holders of desirable lots. Sales of 300,000 sks of good No 1 is reported at $1.85, a figure which is considered above the market, as shippers claim to bid only $1 80@1 82½, and are not anxious purchasers at these figures In the sample market, extra choice milling is quotable at $1 85@1 87½. On Call yesterday bids were as follows: buyer, the season, $1 86¼; seller, the season, $1 85¾; seller, December, $1 85, buyer, 1883, $1 86¼; seller, 1883, $1 87 per ctl.

BARLEY—

Exports, 1979 ctls

Receipts of week, 64991 ctls

Receipts continue excessive, and the bull element has, evidently, been unable to sustain the market, and the consequence is that prices show a material decline in the speculative market, though lots for shipment for almost the same money as at the time of our last weekly report. By sample, No. 1 feed sells for $1 02½@1 05; dark coast, 95c@97½c; brewing, $1 07½@1 10, bay chevalier, $1 30@1 40. On Call yesterday bids were as follows: buyer, the season, $1 02½@1 17½. Sales of No. 1 feed, on call yesterday included, in 100 ton lots, 500, $1 12½; 700, $1 12½; 500, $1 12¼, 100 $1 12⅝; 1000, $1 12½, 500, $1 12; buyer, the season, ending May 31st, 1884, $1 00, $1 01½@1 00, seller, 1883; 1200, 99½c@99c, seller the season. The market closed weak and prices had a downward tendency.

OATS—

Imports, 38 sks.

Receipts of week, 7335 ctls.

Recent arrivals come to strong hands, and no decline in prices has been recorded. Parcels of strictly choice are scarce, and this description is wanted by local manufacturers of oatmeal and for fancy feed.

We quote: black, $1 42½@1 50; white, $1 50@1 85 for common to extra choice. On Call, $1 75 was freely bid for lots of No. 1, seller 1883, and for the same $1 80 per ctl is asked

CORN—

Imports, 1007 ctls. Exports, 80 ctls.

Receipts, 3805 sks

Petty consignments are occasionally received from the southern coast, but as yet no considerable parcel of the new crop has been received thence. Quotations are largely nominal.

Large Yellow, $1 45@1 50, White, $1 50@1 55; Nebraska, $1 42½ per ctl.

BUCKWHEAT—

Receipts of the week, 4 sks.

Market nominally quotable at, $2 50 per, ctl for good.

RYE—

Receipts of week, 277 ctls

Stocks in city warehouses are considerable, but the amount offering to meet sales made sometime since at figures higher than are now quotable. We quote $1 10@1 25 per ctl as the market range for parcels sold by sample.

MILLSTUFFS—

Imports, 2,396 cts millstuffs. Exports, 1623 ctls bran, 641 ctls millstuff

Receipts of week, 10818 sks Bran, 3610 sks Middlings, 3219 ctls Ground Barley: 482 ctls Ground Feed

We quote: Ground Barley, $23 50@24 50 per ton. Middlings are selling at $17 50@18 per ton; Oil Cake Meal $32 50, Feed Corn Meal, $36@36, Cracked Corn, $36 per ton.

HAY—

Exports, 10 tons.

Receipts of the week, 1088 tns

We quote: Alfalfa, $7@8 10; Wheat, $13@15, Stable, $12 00@14 00, Wild Oat, $13@15, Cow, $9@11, Barley, $10@12 50 per ton.

STRAW—

Receipts of week, 107 tons.

Quotable at 55@65c ₩ bale, as to condition.

SEEDS—

Imports, 19 cs 1524 sks

Receipts of week, 28 sks mustard, 1510 sks flax, 519 sks alfalfa, 127 sks canary.

Flax quotable at $2 50@2 75 ₩ ctl, Canary, 5¼@5½c; Alfalfa, 9¾@10c ₩ lb, Timothy, 7½@8c for native and 8½@9c for imported; Mustard, choice Brown; $3 00@3 25 ₩ ctl; White, $2 75@3 00; Hemp, 4c, Rape, 3c@3½c

BEANS—

Exports, 63 ctls

Receipts of the week, 30113 sks

The man from the East has been around again and cleaned up all the Reds there were in sight. Whites are still the observed of all observers, the opinions of dealers vary so much on the future of this variety that we must refrain from inflicting ours on our readers

Pinks and Bayos are looking up Butters are eagerly picked up. Limas are dull and slow, they are not selling so briskly as they were a few weeks ago.

Our quotations are, for round lots from the wharf, Small White and Pea, $3 30; Bayos, $3 50; Pinks, 3¾; Reds, none in market; Butters, $3¾; Limas, $3 3 5

VEGETABLES—

We quote: Carrots, 35@50c; Turnips, 75c@$1 00, Cauliflower, 60@75c ₩ doz; Cabbage, 60@75c ₩ ctl; Garlic, 4@5c ₩ lb; Celery, 50c ₩ doz; Dried Okra, 20@25c ₩ lb, Dried Peppers, 10@12½c ₩ lb; Green do, 50@75c ₩ bx; Green Peas, 5c@— ₩ lb, Tomatoes, 25@50c ₩ box; String Beans, 4@5c ₩ lb, Artichokes, 10@15c ₩ doz; Green Corn, 8@15c ₩ doz, Lima Beans, 5@6c ₩ lb; Beets, 75c ₩ ctl; Parsnips $1@1 25 ₩ ctl; Marrow Fat squash, $8@10 ₩ ton. Cucumbers, 75c@1 00 per box.

FRUITS—

Imports, 74 bdls sugar cane, 3 box apples 3068 bunches bananas, 300 box limes. Exports, 1073 box fruit 6 box apples

We quote: Domestic—Strawberries, 8@10 ₩ chest; Apples 50c@2 00 ₩ box; Pears, 50c@1 25 per box; Quinces $1.25@1 50; Grapes, 40c@1 00 ₩ box; Cape Cod Cranberries, $18 00 per bbl; Western do, $12 per bbl.

Tropical—Lemons, $7 50@8 50 per box for Sicily; Limes, $6 50@7 50 per box for Mexican; Tamarinds, 12@13c per lb; Bananas, $1 75@3 00 ₩ bunch, California Oranges, $2 25@2 50.

NUTS—

Imports, 30 box nuts, 93 box 54000 cocoanuts. Exports, 65 box nuts.

We quote: Cocoanuts, $8¾@9 ₩ 100; California Walnuts, 8¾@9c ₩ lb; Chili do, 8½@9c; California Almonds, hard shell, 7@9c; soft shell, 14@15c; Filberts, 14@15c; Pecan, 12@13c; Peanuts, 7@8c; Brazil Nuts, 12@13c; Hickory Nuts,

HONEY—

Exports, 987 cs.

We quote: Extracted, 6½@7½c; Ex White Com 18c; White, 15c, Dark, 12½c.

BEESWAX—

We quote 28@30 c per lb.

DAIRY PRODUCE—

Imports, 6242 lbs butter, 2860 lbs 2 cs cheese. Exports, 39223 lbs butter, 1010 lbs cheese.

We quote: Point Reyes, 37½, Choice, 32½@35; Fair to Good, 22½@30; inferior lots from country stores, 16@17c, firkin, 20@21c for old and 24@27½ for new; Eagle, 15@17c, Pickled Roll, 25@27½; Cheese, California, 15@16c for choice; 11@12c for Fair to Good; Gilroy, in drums, 15@17c; Eastern, 17@18c; Western, 8@12c.

OLEOMARGARINE—

We quote the range from 20 to 22c, according to package

EGGS—

Imports, 1255 bxs 53 bbls. Exports, 2 bxs.

We quote: California Eggs, Choice Ranch, 45 to 47½c per doz; Eastern, 32@35c.

POTATOES—

Imports, 118 sks. Exports, 58 ctls.

Receipts of week, 2762 sks

No change in prices. Early Rose are not despised as they have been for the last few weeks, but are eagerly bought up for the table. There were over 10,000 bags of all kinds of potatoes arrived yesterday and it has had a weakening tendency all around.

We quote Chili Garnets 75c; Early Rose 40@50c River Reds, 45c; Tomales, $1, Cuffy's Cove, $1 15; Humboldts, $1 05.

ONIONS—

Exports, 14 ctls.

Receipts of week, 2702 sks.

No change. Market glutted with poor quality. No. 1 are scarce, and find ready sale at quotations.

We quote the market at 60@65c.

POULTRY—

We quote: Turkeys, Live Gobblers, 17@20c ₩ lb; Turkey Hens, 17@20c; Dressed, 18@22c; Young Hens, $5 50@7 00; Old Roosters, $5 00@6 50; Hens, $6 00@7 50; Broilers, $4 50@5 00, according to size; Ducks, $7 00@9 50 ₩ doz; Geese, $1 75 or 2 25 per pair.

GAME—

We quote: Quail, $1 25@$1 37½ ₩ dozen; Hare, $2 00@2 50, Rabbits, small, $1@$1 25; cotton tail, $1 25@1 50 ₩ doz; Teal, $1 25@1 50; Sprigs, $2 25@2 50; Widgeon, $1 37½@1 50; Mallards, $3 50@4 00 ₩ doz, canvas-backs, $1 00@4 50 per doz, common snipe, 50c@75c ₩ doz; do, English, $1 50@2 00 ₩ doz; tame Geese, $2 75@3 00 per doz; Wild Geese, $1 50@1 75.

HOPS—

Imports, 274 bls.

Receipts of the week, 664 bls.

The market remains without notable change. We quote the market at 17@19c.

WOOL—

Imports, 335 sks.

Receipts of week, 2005 bls.

For Wool market see Wool Department.

HIDES, SKINS, ETC.

Imports, 770 hides, 138 bdls 127 pkgs 9268 skins. Exports, 5 bls hides.

COAL
Imports, 3326 tns Pacific Coast, 6717 tns Foreign and Eastern, 1118 tns coke

The latest cargo transactions show a still further improvement, and the sales of this week will almost clean up all the cargoes in first hands, so that it would be a very difficult task to purchase any cargoes en route at quotations given above, as they all go into consumers' or dealers' hands

It has now become an established fact that there will be no depreciation from present prices for several months, as no low priced Coals can arrive within that time, there being no inducements for sailing vessels to seek this port to move this season's crop It is very fortunate for consumers that our coast collieries are simultaneously becoming producers again, otherwise much higher prices would be ruling Full rates of freight are quoted on Cumberland and Anthracite, from Baltimore and New York

Importers prices of coal, Foreign and American, to arrive Australian, $8@8 25, Liverpool Steam, $8@8 25 West Hartley, $8¼@8½, Scotch Splint, $7@8, Cardiff Steam, $7¼@7½, Lump Lehigh, $13@13¼, Egg Hard, $11½@11¾, Cumberland, bulk $10½@10¾. Spot prices are as follows. Australian, $8 50, Liverpool Steam, $9 00, West Hartley, $9½, Scotch Splint, $9 50, Cardiff, $8 00, Lehigh Lump, @$13, Cumberland, bulk, 11 50, Egg Hard, $11 00.

DRY GOODS—
Imports, 15 bls 68 cs Exports, 27 cs.

FISH—
Imports, 229 pkgs 11 bbls 32780 lbs fish, 8727 cs 289 bbls 115 hf bbls salmon. Exports, 37 cs fish, 4522 cs salmon.

We quote: Columbia River, $1 20; Sacramento, $1 10, f. o. b.; barrels $14 00, hf barrels, $7 50, California Cod, in 50-lb bundles, 5c; selected, in cases, 6c; boneless, 7c.

G. & B. POWDER—
Imports, 800 kgs gunpowder.

California Blasting is quotable at $3 25 ⅌ keg; Dupont Blasting, iron kegs, $3; Hazard do do, $3 25; Hazard K R P, in canisters, 50c lb lb; do do Electra, $1, do American Sport, 75c; Dupont's Sporting—Golden Pheasant, kegs F, FF and FFF, $5 50; ½ kgs, $3 00; ¼-kegs, $1 75; Superior Rifle, kegs, Fg, FFg, FFFg, $7 00, ½-kegs, $3 75, ¼-kegs, $2 25, Eagle Duck, kegs, Nos 12 and 13, $14, ½-kegs, $7 50, ¼-kegs, $4 00, Diamond Grain. 5 lb cans, Nos. 1, 2 and 3, $4 75; 1 lb canisters, $1 00 Winchester Metallic Cartridges, rim fire, according to brand om $2 50 to $16 00 ⅌ 1000, celntra fire, according to brand, from $8 50 to $35 lb 1000, U S Cartridges $100 ⅌ 1 000.

HARDWARE–
Imports, 611 pkgs. Exports, 181 pkgs.

IRON –
Imports, 1573 bdls 650 tns 127 pkgs 266 brs 11 sheets 1 lot iron, 100 bdls irons pipe, 33 bdls 50 brs 1675 steel rails. Exports, 567 cs 51 pkgs iron, 4 brs steel.

Nothing very encouraging to report; very little Iron changing hands, and each sale scores a loss to the vendors This cannot last, as importers are not seeking prestige at too high a cost and will certainly discontinue importing an article showing a loss as continuously as Pig Iron does Business at the foundries is diminishing somewhat, and will not pick up again for several months The nail factories and rolling mills report a steady business.

LEATHER—
Imports, 29 rlls 10 cs 9 sks. Exports, 1 roll

We quote: Sole, for shipment, 18@18½c ⅌ lb, Rough do, 18c; Best Sole Leather, for this market 28c, Medium do, 25c, Light do, 23c; Harness, 25@30c, Harness No. 2 do, 21

WINES –
Exports, 705 gals native.

For remarks see Wine Department

Freights and Charters.

Investments in deep sea ships are always precarious; profits are sometimes enormous, and at other times the losses are heavy Ships have not been in worse plight for twenty years than they are to-day in this port Nearly 80,000 registered tons of shipping disengaged suitable for wheat carrying and 55,000 tons more nearly due, due or overdue. An iron ship accepting 35s for Cork and U. K., orders, and the original charterer paying the difference in coin, tells the story, true a wood vessel this week obtained 31s for the same destination, but it could not have been repeated yesterday at 30s But 30s or 31s or 35s is a miserable business for owners, and there are no signs yet of improvement We thought a month ago ships had reached bottom but they have since found lower depths

The market is dull, without life and weak. No one seems to want ships and shipowners are not anxious for charters Where owners ask for business, low quotations must be accepted. Wood vessels seeking charters would be lucky to get 30s Liverpool or 32s 6d Cork, U. K., Havre or Antwerp. The fact is that charterers can not only get their own terms but get options that in former years would be worth 1s 6d thrown in. We hear of no charters made yesterday.

The engagements of the week have been: British bark Seried Wyn‡, 1065 tons, wheat to Cork, U. K.; 60s chartered prior to arrival German bark Britannia‡, 841 tons, wheat to Cork, U K.; 40s- rechartered prior to arrival British ship Falls of Foyers‡, 1880 tons, wheat to Cork, U. K; 57s 6d chartered prior to arrival Ship Invincible, 1394 tons, wheat to Cork, U K, Havre or Antwerp, 35s Liverpool, Havre or Antwerp direct 2s 6d less Sh Josephus, 1397 tons, sugar and hemp from Philippines to New York; private Ship Daniel I Tenney, 1686 tons, sugar and hemp, from Manila to New York, private. British ship Scottish Wizard‡, 1140 tons, wheat to Cork, U. K; 60s chartered prior to arrival. Bark D. C. Murray, 132 tons, returns to Honolulu. Brig Tahiti, 276 tons, returns to Tahiti. British ship Nagpore‡- 1521 tons, wheat to Cork, U. K; 41s 6d—chartered prior to arrival. Schooner Pannonia, 197 tons, rail, road ties to San Blas Schooner Frithiof, 231 tons, merchandise to Mexican ports British ship Micronesia‡, 1500 tons, wheat to Cork, U. K.; 35s rechartered Ship A. D. Snow, 2075 tons, wheat to Liverpool direct 31s British bark Chieftain, 898 tons, wheat to Cork, U. K., or Continent, 32s 6d direct port 30s rechartered British ship Anyone‡, 1300 tons, wheat to Cork, U. K; 60s chartered prior to arrival. Ship Great Admiral, 1497 tons, sugar from the Philippines to New York.

Finance and Trade.

Some loans were made to-day from local banks at 8@9 per cent. The minimum rate for commercial oans is 7. The Savings Banks are generally asking 7 per cent on city property, though there is still some business at 6. Domestic exchange is quoted at 15@20c premium for sight drafts on New York and 25@30c for telegrams. Bank bills on London are drawn at 49⅝d, for 60 days; commercial bills on London, 50d; Refined Silver, 13@14 per cent discount, Mexican Dollars, 89c to 89½c

Customs Duties.

Duties paid at Custom House for week ending Nov. 15, 1883. Duties payable in United States gold coin, standard dollars or greenbacks:

Nov. 9, Friday.	$34,634 93
" 10, Saturday	12,310 60
" 12, Monday	33,745 74
" 13, Tuesday	32,452 71
" 14, Wednesday.	15,640 38
" 15 Thursday	13,351 26
Total.	$141,135 62

Meat Market.

Beef is firm at quotations, with a moderate supply. Mutton is unchanged, the supply being ample and the market dull Pork is a shade higher Hogs are not arriving quite as freely as during previous weeks. Following are rates for whole carcasses from slaughterers to dealers:

BEEF—First quality, 8c, second quality, 6½c to 7½c; third quality, 5@6c ⅌ lb

VEAL—Large Calves, 6@7c; small ones, 8@9c ⅌ lb.

MUTTON – Wethers are quotable at 5c and Ewes at 4@4½c ⅌ lb, according to quality.

LAMB—Spring is quotable at 6c ⅌ lb.

PORK—Live Hogs, 5⅜@5⅝c for hard grain; hogs on foot dressed, do, 7¾@7⅞c.

FRIDAY . . . . NOVEMBER, 16 1883

H. K. and F. B. Thurber, of New York, appeared for admission to membership in the National Wholesale Druggists' Association, and were respectfully but firmly refused. If K. says now that the wholesale drug business is a blasted monopoly anyhow, and he does not like monopolies by which he does not benefit.

J. Winslow Jones and F. D. Ellis, stockholders of the Winslow Packing Company of Portland, Me., have filed a bill in equity against C. F. Mattocks, President of the corporation. It is alleged that Mattocks appropriated $75,- or $100,000, and charged over $40,000 for his services since January 1, 1882. The Mattocks above mentioned, the St. Louis *Grocer* says, is the man with whose sanction Ohio corn was packed last year and sold as the Maine product. It seems that rapid judgment is overtaking the perpetrator of that fraud.

The issue between ex-Senator Sharon and Miss Althea Hill and her trusted adviser, Wm. Neilson-McCann, is fairly joined. The stake is greater than the disposal of a few million dollars. It is, if the parties pursue it to the bitter end and testify on the witness stand to the allegations of the complaint and the answer, State Prison for one side or the other. If Mr. Sharon did live with the plaintiff in the relation of husband and wife, did sign that marriage contract, did attempt to obtain it from the woman by threats or otherwise, then he ought to be convicted of perjury and sentenced accordingly. If Althea Hill is a pretender, a blackmailer and the utterer of a forged document, she ought to be sent to the penitentiary, and in that case there would be little difficulty in proving that Wm. Neilson-McCann was her accomplice if not the instigator of the crime and her partner in the prospective proceeds, and he should be at least as severely punished. In that event, this latter gentleman would enjoy the uncommon experience of being incarcerated as a felon twice in his life, and under two flags for an offense of the same kind. If he and his female friend are innocent, then we should have a sensation indeed, in seeing a white-haired millionaire, an ex-Senator of the United States, behind the bars for a crime which strikes at the root of all judicial proceeding and of relations which are the very foundation of society. This, indeed, will be "a celebrated case."

Health, so far as mere sun-tanning is concerned, is only skin deep. For that matter a person engaged for any length of time in a close room, in near proximity to a strong electric light, will soon become as darkly canned as by exposure to the rays of the sun. It is said linen may be bleached by lectricity.

Labor and Immigration.

One of the great needs of this coast, and one that will increase in importance, probably for some years to come, is a larger supply of sober, industrious and willing white labor. As the number of Chinese in California, in spite of the frauds committed in running into our ports a class intended to be excluded by the treaty and the law, is steadily decreasing, and our extended operations, both in manufacturing and in agriculture, are calling every year for a larger force of laborers, it behoves those interested to give more attention than ever to this subject. It is worse than useless to plant large vineyards if there are insufficient hands to gather the grapes, it is a mere waste of capital to plant fruit trees by the thousand and hundred thousand if labor to gather the fruit is not to be had. There was a time when some thoughtful minds discouraged the bringing of white men from the East or from Europe to depend on daily labor here. Chinese could be had in any number and at prices which white families could not live on, in that comfort and plenty which laborers have a right to expect. Then labor was not continuous, especially in the agricultural districts. A few short weeks in seed time and a month or two in harvest and idleness for the remainder of the year was all we had to offer them. For their wives and boys, however willing to work, we had no employment. Now all things are changed. The agricultural laborer is no longer dependent solely on the grain farmer for means of subsistence. An 100-acre vineyard or orchard will employ labor more continuously and more of it than a 500-acre wheat field. Napa, Sonoma, Alameda, Santa Clara, Solano, Fresno, Los Angeles and San Bernardino counties could each furnish a full summer employment next year to from 200 to 300 industrious, sober laborers and their families, over and above what they have resident among them, without any danger of overstocking the labor market. Every county in the State with two or three exceptions could take good care of 100 men with families. In 1885 all these counties could take care of twice these numbers. Ten thousand married agricultural laborers of family would add 40,000 to our population, and this is over and above what increase of laboring population our towns can take care of. If we get these 10,000 adult laborers here during the next spring and summer, and the seasons are propitious, it will go well with our vineyardists, and orchardists. If we do not get them or any large number, we must expect an outcry against the restriction of Chinese immigration. Our California Immigration Bureau under the management of the members of the Board of Trade and Mr. A. R. Briggs are doing a great work, and bringing large, numbers to this State, but a large proportion of these thousand or more immigrants who are arriving weekly are of classes, who will increase the demand for, not the supply of, labor. The several viticultural and horticultural associations and clubs throughout the State should take some action in this matter. As instance they might canvas their section of country and ascertain how much extra labor they will need next year without over-crowding, and how many months in the year employment may be expected to last, and what will be the minimum wages, such laborers may expect to receive, and report the result to A. R. Briggs the president of the Immigration Bureau. Moreover, this immigration association is chiefly supported by the subscriptions of our merchants, and little or nothing can be done without money, and they should appropriate a reasonable sum half yearly to aid in pushing the business.

The "Diamond S" Suit.

The suit of the California Sugar Refinery, of this city, against H. Levi & Co., wholesale grocers, for infringing a trade mark by refilling empty syrup kegs, branded "Diamond S California Sugar Refinery," with other and inferior syrup and selling the same as the true "Diamond S" syrup was tried this week. The conclusion arrived at by the jury was not the one expected by many in the trade who knew the facts, nor is it altogether pleasing to persons in other lines of business who own valuable trade mark rights which are liable to be infringed by unscrupulous parties. The main points of the defense were that H. Levi & Co., had some Eastern syrups, in leaky packages; that they purchased some empty kegs in which to repack the syrup, that these kegs were branded "Diamond S" that they instructed their porters to remove the brands from all the kegs, that from carelessness these men failed to carry out their instructions fully, an I some kegs with the "Diamond S" brand were sent out, but without the knowledge of the defendants. Moreover, that the syrup placed in these kegs was equal in value to that of the California Sugar Refinery. This story, well stuck to by all of the witnesses for the defense, prevailed with the majority of the jury and they rendered a verdict accordingly. We are reminded of the girl's plea to the priest who was reproving her for incontinence: "It was the first time and the baby was a very small one."

CHRONICLE'S "SLAVES" SAYINGS.

The Hawaiian Consul at St. Michaels has effectually answered the Chronicle's ravings about the miserable condition of the Portuguese immigrants on the Hawaiian Islands, by publishing a list of the remittances sent from that kingdom, by Portuguese immigrants from the Azores, during the period from 23rd of February to 2nd June of this year. This covers a period of about fourteen weeks and makes the respectable total of $7,538.20, sent in 222 separate remittances. The average per remittance is therefore about $34. The sums vary from five up to two hundred and ten dollars but from ten to fifty dollars is the usual range. These circumstances prove two things, as the Honolulu *Advertiser* says First; that the contract service which Portuguese immigrants enter upon on their arrival here is not one in which the laborer is ground down to accept a bare living. Not only does he in three years earn, in addition to his regular wages, the cost of his passage from the distant land he left behind him, but he can save money out of his wages. Second; That the people we have brought here from the far off islands of the Atlantic are just the sort of people we have desired to bring, viz., a thrifty race, capable of accumulating, before they have been long in the land, the foundations of future independence.

LOW PRICES FOR GROCERIES.

The St. Louis *Grocer* has an article on the 8th, showing that, with three exceptions, staple groceries are being jobbed at prices lower by an average of seven per cent less than in autumn of 1882. The situation in San Francisco is substantially the same as in St. Louis, and as retailers generally have not reduced their prices, their profits have increased. The St. Louis *Grocer* says:

But one staple article in the grocery trade at the present time bears a high price —that is, a price above what the natural conditions would warrant—and that article is coffee. The continued high price prevailing at Rio, higher than in New York, is a state of affairs closely paralleled by that of 1880, when the Brazilian government entered the field as a coffee buyer. It may be the Government is in the ring again, and, if not more successful than in 1880, it will make a poor speculation. It will also be recalled that in that year the coffee ring in New York was broken and the big operators ruined. History may repeat itself again over the article of coffee.

Outside of coffee, prices of staple groceries are very low—considerably lower than a year ago. We have compared ruling prices in St. Louis of jobbing lots of staples on November 1, 1883, and same date 1882, and the result is very interesting. The following table will show the situation:

	1883.	1882.
Coffee, fair	$ 13	$ 10
Sugar, cut loaf	9⅝	10¼
" granulated	8¼	9⅝
" standard A	8⅛	9
Peaches, standard, No. 2	1 40	1 57½
" " No. 3	1 97½	1 95
Oysters, " No. 1	97½	97½
" " No. 2	1 67½	1 68¾
Salmon, No. 1	1 45	1 66¾
Corn, Winslow's, No. 2	1 55	1 47½
Tomatoes, standard, No. 2	82½	97½
" " No. 3	1 00	1 20
English currants	6¾	6¾
Rice, prime	6⅞	6⅝
Butter, creamery	26½	38
Cheese, full cream	10¾	13
Flour, family	4 08	4 05
Pork, mess	10 87	22 00
Lard, prime steam	7	11⅜
Tobacco, plug	50	60
" smoking	38	48

Tobaccos, both smoking and chewing, are about ten cents per pound cheaper than a year ago. In the above list but three articles bear higher prices now than last year, viz., coffee, canned peaches and family flour, but only coffee shows a marked advance, the advance being thirty per cent. Taking the whole list as it stands above, and adding up the unit amounts, we find the decline to be thirty-one per cent. compared with a year ago. Of course this large per cent. is due to the decline in provisions, and leaving them out we find the decline on purely grocery articles to be seven per cent., a loss that must have been severely felt by wholesalers who carried heavy stocks. This may account for the small profits made by many wholesale grocers, and in this decline the big fish have been hurt more than the little ones.

To the retailer, however, the past year should have been one of good profit, as the retailing prices have not declined in proportion with the jobbing prices. We hear little complaint from retail grocers that no money can be made, but from the jobbers we are favored with some very vigorous remarks. The signs of the times indicate that prices of staples will continue to be low.

The retail druggists of Philadelphia, the St. Louis *Grocer* says, are complaining of grocers selling drugs and patent medicines, and request manufacturers to prevent this competition, threatening all who refuse that they will decline to handle, and even discredit their goods. That means that they will, if necessary, say a good preparation is bad, if it can be bought at a grocery store.

That judging from the editorials and correspondence on the relations of the Typographical Union and the *Bulletin* and *Call*, the printers' war is not over yet. When we read some of these articles in the *Caronicle* and other papers we cannot help feeling that this remarkable interest in the Typographical Union affairs is due more to the wish to injure business rivals than to help oppressed mechanics.

A Pittsburg man who put in the summer on the fifth floor of a city boarding house truthfully insisted that most of his vocation had been passed in a mountain resort.

RETAILERS' CORNER.

General trade in groceries has not been over brisk during the week and the changes have no importance. In several branches of trade we hear no complaints as yet of loss of Oregon trade, but all feel assured that it is inevitable for all but goods manufactured on this coast. But to make up for this loss, we are now placed on equal footing with the East in reaching the Montana and Idaho trade. The opening of the Northern Pacific not only obtained for us favorable rates on that road, but made the Union Pacific forgo its selfish policy of holding its branch, which runs through Montana and Idaho, for its own exclusive use, and now the Central Pacific is made agent for the branch, and favorable rates can now be obtained on goods shipped from this city.

SUGAR.

The demand from jobbers during the week has been exceptionally good and have not been lacking in business in this line also. Retailers are taking in stocks at the reduction, and many of them are making a profit on sugar, as their reduction is not in proportion to the reduction in cost. A fall of a cent is a godsend to the retailer who does not carry a large stock. As very few consumers are conversant with the actual amount of these reductions, and he can easily, for a time at least, reduce his price a half cent and keep his reputation of giving his customers the benefit of reductions and still make a good profit. The New York market has been rather quiet during the week, and prices are a shade lower. The western trade, according to the Chicago and St. Louis papers, has also been light.

COFFEE.

The situation of the Coffee market on this coast is getting to be a serious one. The available stock of Central American Coffee to last till the new crop comes in. Of course we can import Rio Coffee, but the people on this coast are not used to Brazilian Coffee, and before they are taught to use it Costa Rica and Guatemala Coffee will have to advance two or three cents higher than the Rio can be laid down for. The situation of the New York market does not promise any very favorable terms from that side, so we do not see any chance of coffee remaining even stationary. The local market has not advanced, but the market is very strong, and overland shipments continue to go forward, so that stocks are being rapidly reduced. St. Louis is trying her best to bear the Coffee market, but still her purchases in this market continue unabated, which shows that though heyt would like to buy cheap Coffee, they do not see any immediate fulfillment of their wishes. The New York market during the week has been rather tame for Fair and above, but Ordinary has been in good request at full rates. The market at Rio does not appear according to the cable advices at hand, to have undergone any material change since our last issue. The receipts last week averaged 13,000 bags; purchases for this country were fair; stocks have increased, but values are without quotable change and the market is called firm.

RICE.

The market for Rice has been rather dull during the week, and Mixed and the lower grades of China have been very much neglected. No. 1 China, however, is in very good request, but the stock is so small that it cuts no figure in trade. The stock of Island Rice is small and the market is steady, with light business.

CANNED GOODS.

Trade during the week has been rather light. Tomatoes are unchanged from last week's figure and the packing is about over. In Hartford county, Maryland, Tomatoes have reached the lowest notch they ever touched—that is 80@82½c for 3s. There has been a lively squibble during the last few weeks between a Baltimore and a St. Louis broker over these same tomatoes. California fruits are selling freely in Chicago.

DRIED FRUITS.

There is nothing new to say about Dried Fruits; they are about all marketed and well held by the city houses. In Chicago there has been quite an advance in California sun-dried Peaches, and as the trade does not seem to care to take hold of them at the advance, we do not think the price will be held.

Trade Failures.

There were 195 failures in the United States reported to *Bradstreet's* during the week ending Nov. 3rd, 11 less than the preceding week, 41 more than the corresponding week of 1882 and 60 more than the same week of 1881. Compared with the preceding week the middle states had 52, a decrease of 6; New England states 19, a decrease of 3; southern states 31, a decrease of 2, western states 62, an increase of 4 Pacific states and territories 31, a decrease of 5, Canada and the provinces had 13, a decrease of 3. The principal firms reported embarrassed were The E. M. Boynton Saw & File Company, The Anthera Manufacturing Company, rattan goods, Lovejoy & Drake, hardware manufacturers' agents, Hermann & Walz, fancy goods manufacturers, William E. Stein, handkerchiefs, and Simon Lautenbach, shirt manufacturer, New York; Culver, Page, Hoyne & Co., manufacturing stationers, Chicago; Evans & Hinkley, hides, St. Louis, and The Knife Falls Lumber Company, St Paul, Minn. In the principal trades they were as follows: General store 353, grocers 25, hardware 12, manufacturers 17, liquors 10, clothing 9, hotels and restaurants 8; grain, flour and millers, 7, shoes 6; dry goods 6; carriages 5, drugs 4, furniture 1, commission 4, harness 4, jewelry 3, builders 3, steamers 3, produce and provisions 3, fancy goods 3, tobacco and cigars 2, hats 2, lumber 2, mens' furnishing goods 2, butchers 2, iron 2, leather 2.

Spirit of the New York Markets.

NEW YORK, Nov. 7th.—The annual elections have absorbed a large share of the attention of the mercantile and trading classes, largely to the exclusion of business, and there have been fewer changes in the commercial and financial situation than usual during the two business days under review. Transactions have been comparatively light and prices for the most part steady. The industrial situation continues about the same as for several past weeks, production being somewhat in excess of consumption. The Grain, Flour and Provision markets are all firmer, but the export trade continues moderate. Cotton is steady, and both spot and futures are lower. Wool and Tobacco remains quiet and steady. Refined Petroleum is inactive and nominally steady, and Crude Certificates are again lower. Sperits Turpentine has advanced, but Rosin is dull and unchanged. Coffee Hops are firm and in demand, while inferior are dull and depressed. India Rubber is dull, and prices favor buyers. New Raisins have further advanced, while new Turkish Prunes are the turn cheaper. Drugs and Dyes are dull, but prices generally are steady. Ocean freights are exceedingly dull and for the most part weak. Raw Sugar is dull and nominal; Refined is a trifle higher. Molasses is in fair demand. Coffee is quiet and easier. Tea is dull. Rice is slow of sale. Pig Iron is dull and weak. Steel Rails are lower. Tin is weak at a further decline. Lead is dull and nominal. Other metals unchanged.—*Shipping List*

TOBACCO MARKETS.

SAN FRANCISCO.—The scarcity of Havana wrappers and good fillers, continues. There is a fair demand for Sumatra '81 but all other sorts of leaf are neglected. Until the new year opens, trade in leaf cannot be expected to revive.

Local cigar manufacturers do not complain and most of them are doing well.

In manufactured tobacco the advance is generally secured but as there is no longer any heavy business, and none can be expected until the middle of January, it is of less importance to dealers

It has long been an open secret in the trade that the Seal Rock Tobacco Company has not been a financial success. In another column will be found the substance of Whicher Jones' complaint in a suit against J. Brandenstein. The suit is an extraordinary one and until Mr. Brandenstein's answer is filed, outsiders can form no opinion on the merits of the case. It is a fact, however, as we understand, that Mr. Brandenstein's loses by his Seal Rock investment, have been much larger than Mr Jones' hence it is improbable that he conspired to make the venture unprofitable.

Total imports by sea and rail, 60,428 lbs manufactured tobacco, 191,330 lbs leaf tobacco, 32 cases cigars, 18 cs cigarettes. Total exports by sea, 10 lbs manufactured tobacco

[U. S. Tobacco Journal.]

NEW YORK, Nov. 3d.—Under the circumstances the business of the week must be noted as having been good. A few hundred cases of nearly every crop offered was sold, which went mostly into manufacturers' hands at good prices The presence of Sumatra in our market is a blessing to manufacturers Were it not for that, the Connecticut seed leaf wrappers would bring 75 cents, in lots In his purchases of seed to-day, the posted manufacturer figures his wrappers down to within about 65 per cent of Sumatra. If it reached above that he prefers Sumatra There have been numerous purchases of '83 made in the county at prices which even cannot stand the competition of Sumatra, the consequence will be heavy losses Evidently the business of packing tobacco is becoming more difficult and more thankless every day True enough, the '82 crop, excepting Connecticut, yielded splendid profits for many years past, so to provide the owners of large factories with sufficient capital to make direct purchases and ignore the packer and dealer. Therefore the position of the packer is every year getting somewhat less important in the mercantile machinery of the world.

The predominant desire on the part of purchasers of '82 tobacco is still for leaf raised from Havana seed. The selections being greatly reduced and the offerings mostly undesirable, especially in price, there attention most always turns to fine '82 Pennsylvania, which sells at 19 to 22 cents. Of course, low grades can be had for 12 to 15 cents. Most of the present purchasers buy in lots of 50 to 100 cases, preferring selections of wrappers and binders to running lots, with fillers. Fillers are hard to dispose of in quantities This has caused the presence of large lots of fillers in the market to day, which sell at 3 to 5½ cents for export.

The financial condition of the trade remains excellent.

[New York Tobacco Leaf]

PHILADELPHIA, Nov. 1st.—The past week's sales of manufactured hard tobacco have somewhat fallen off in demand, with the business beginning to assume the condition of "as needed," etc. This will hold good for a short time, as the hard trade is quite

JOBBERS' PRICES.

NOVEMBER 16.....1883

If some of the owners of wool factories in the east who confine themselves to spinning yarn, would come to California and look at the field, they would conclude to bring their machinery here without a season's delay. Any man of good references and of established reputation, who has $50,000 worth of machinery, could get gentlemen in this State who are interested in wool production to join him in an enterprise such as spinning yarn, which would make them less dependent on the caprices and prejudices of eastern wool dealers.

SORTING FLEECES.

Too much attention cannot be given by wool growers to sorting their clip, to putting the best fleeces and the best of their fleeces in one lot, and inferior wool, black wool and heavy tags in another lot. The finest California wool cannot be worked alone with every fabric, but when Australian wool is necessarily used, 25 per cent at least of California wool can be worked in with it at a great saving in cost. This, however, can not be economically done while flock masters put everything, clear wool, defective wool, black wool and tags all into one bale. The wool growing business is now carried on in this State without thought, without care. The only reason why we do not regret the reduction of the duty on foreign wools is that, while high protection was maintained flockmasters generally said, "We are doing well enough; we are satisfied as things are."

Sorting and Scouring Wool.

The *Grocer and Country Merchant* had an article, two or three weeks ago, on the advantage that would accrue to California wool growers if five or six sorting and scouring mills were established at several points, each centres of wool growing, in this State. As it requires skilled hands to sort and scour wool, and as the difficulty in this city has hitherto been that the work was not continuous and the skilled labor sought other employment, the *Grocer* recommends the establishment of small woolen mills in connection with sorting and scouring mills all over the State. We think that the object would be better secured by establishing spinning mills in connection with these scouring mills. Such mills could then scour for wool growers, who desired to ship their wool, or could buy it and scour and spin it on their account. This is certain, that when yarn of any quality or number that can be made from California wool, can be bought in lots to suit in this State, we shall have any number of small weaving establishments started. One of the obstacles to persons of moderate means commencing wool manufacturing in this State has been, the necessity of first sorting, and then scouring and spinning their wool, before they could commence the business which they felt they thoroughly understood and came here prepared to carry on. Take away from Pennsylvania, Massachusetts and other States their great spinning mills, and what would become of scores or hundreds of their small weaving establishments?

A Defense of the Old System.

A writer in the *Texas Wool Grower* says:

"The merino cross on the Mexican is, in my opinion, the best we can handle in large numbers, and we must not ask too much or grade too fine; we must have good vigorous rams, without much grease and furnishing as long a staple as possible. Such sheep we know how to handle; so long as pasturage is reasonably good they are safely remunerative; in hard times of drouth or storm there is less danger of loss than if the bodies were larger, and, take them altogether, they are a good sheep when the flock is up to a uniform standard of a third cross. It is a pity we cannot hold them at that, if we could we should have what all western men want, a hardy, good herding sheep, shearing a fairly long fine wool and with good constitution. Higher grading takes some of the latter away. I think seven pounds of wool is all a sheep can carry and rustle for its own support. When we have to farm to feed our sheep the flocks must be cut down, and there will be no more profit in sheep raising than there is now.

A Freak of Nature.

A fine-wooled, strong limb, one month old, may be seen in a flock of ewes at the Paulou Sheep and Stock ranch, Hawaii, that walks upon his hind legs alone not using the two fore feet—which are shorter, it appears much like a young woolly kangaroo. It runs along upon its hind legs more like an emu than the kangaroo. Mr. Frank Spencer intends sending it to the British Museum to astonish the British public.—*Commercial Advertiser, Honolulu.*

Carpet Wools.

What will carpets be made of when the flocks of sheep which now furnish wools of the lowest type—that is, carpet wools—by care and judicious crossing, produce clothing wools?—SAN FRANCISCO MERCHANT.

The sheep producing carpet wools in this country will no doubt be gradually improved—that is, if fine wools continue in demand; but there would have to be a good deal of judicious crossing on the owners of carpet wool sheep in the East and in South America before it could be got into their heads that a sheep could be improved by crossing.—*Cotton, Wool and Iron.*

Yes, and there will have to be some crossing on owners before we get more combing wools, or even first-class mutton.

Old gent: "Ah! Mrs. B., did you keep a diary during your visit to the country?" Mrs. B., indignantly: "No, sir, I didn't. The family bought milk from the neighbors."

Consul Campbell, of Monterey, Mexico, says that commercial failures are unknown in that country, and that fact alone should be an incentive to our wholesale merchants to command the trade of Mexico. Mexican exchanges have been organized in New Orleans and St. Louis, possibly in other cities. It is a good idea. Some of the merchants and manufacturers are sending representatives into Mexico to work up trade; that is a still better idea; but the Mexican merchants are not accustomed to buy goods in that way. The consul thinks that if five or six of the leading merchants and manufacturers in each of the large cities of the United States would club together, rent a house in Monterey and other cities of Mexico, ship a full line of samples of their respective wares and merchandise, and have a live, energetic man to represent them on the ground; he would venture to say that more could be accomplished in six months than by "drummers" in six years, even though their employers belong to a Mexican exchange, and helped to draft resolutions expressing their love for Mexico and her people. The Mexican merchant conducts his business precisely upon the same principles as the American, German, or any other business man. He will buy where he can get the best goods and the cheapest rates.—*St. Louis Grocer.*

SHORT STAPLE.

There is a great difference between high grade rams and thorough-breds. A writer on this subject, who is an authority, says:

"Base blood runs out rapidly by arithmetical calculations; but practically it stays in, and is ever and anon cropping out by exhibiting the old base characteristics in a way that sets all calculations at defiance...

Speaking of Merino sheep and their grades he says;

"I have never knowingly bred with any other ram than a pure blood, of any stock, or for any purpose. My only experience in this particular is in the observation of other m n's flocks, who have bred with high-grade rams. These have invariably lacked the style and perfection of thorough-bred flocks."

CALIFORNIA
Piano Manufacturing Co.

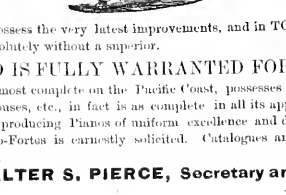
INCORPORATED UNDER THE LAWS OF CALIFORNIA, MARCH 8, 1882.

Manufacturers of Strictly First Class

UPRIGHT PIANOS.

Factory, 431 and 433 Fourth St., corner of Bryant.

Old Kimball Carriage Factory.



Salesroom, 30 New Montgomery St., under Palace Hotel.

Our instruments possess the very latest improvements, and in TONE, TOUCH and DURABILITY are absolutely without a superior.

EVERY PIANO IS FULLY WARRANTED FOR 5 YEARS.

Our factory is the most complete on the Pacific Coast, possesses every kind of machinery, steam, dry houses, etc., in fact is as complete in all its appointments as any Eastern establishment, producing Pianos of uniform excellence and durability. An examination of our Piano-Fortes is earnestly solicited. Catalogues and full description mailed on application.

WALTER S. PIERCE, Secretary and Agent.

JUSTICE BAKING POWDER.

"Fiat JUSTITIA, Ruat Cælum."

SAN FRANCISCO, June 30th, 1883.

We beg to call your attention to our JUSTICE BAKING POWDER, each can of which we guarantee to be full net weight and to contain nothing but the purest Cream of Tartar and the best English Bi-carbonate of Soda, compounded on the most approved formula.

We make the price as low as it is possible to sell this quality of goods, desiring that the purchasers may feel they are getting value received, ALL IN BAKING POWDER, and that they are not involuntary contributors to extravagant newspaper advertising, or to the placarding of fences, as their intelligence must advise them is too often the case when they buy some other brands. At the same time, *Justice* to the manufacturer, *Justice* to the dealer, *Justice* to the consumer, and last, though not least, *Justice* to ourselves compels us to assert in unmistakable terms that, however *Majestic*, *Far-fetched*, or *Sweetly Perfumed* the title by which any other is known, no better, more wholesome, more effective, more economical Baking Powder ever was or can be produced, than that we now offer you.

Justice should be found in every city and town throughout the length and breadth of the land, and we solicit your kind cooperation in our efforts to place it there, feeling confident that the closest investigation and the severest ordeal to which Baking Powders can be subject, will prove its intrinsic merit and fully bear out all we claim for it.

With this introduction we are content to place our *Justice* Baking Powder before the public, and referring you to the accompanying memorandum of prices and style of packages at foot,

We are, very respectfully yours,

TABER, HARKER & CO.

VOL. XI, NO. 7. SAN FRANCISCO, NOVEMBER 23, 1883. PRICE 10 CENTS.

Australian And New Zealand Mails.

The temporary contract for transportation of the Australian, British and American Mails between San Francisco and Australia and New Zealand commences this month. The outgoing mail is being detained in San Francisco for six days beyond the time agreed by the former contract which expires 13th of December next, to afford the contractors an opportunity of timing the arrival and departure of the mails in future so as to employ but three vessels instead of four as heretofore. The steamers to run in this service will be the Zealandia, Australia and City of Sydney. The City of New York is transferred to the Panama route, and the detentions in Sydney will be limited to 13 days instead of six weeks as previously. We are gratified to learn that the speed will be increased and the detentions at the way ports lessened, which will shorten the time occupied in crossing the Pacific Ocean considerably. These favorite vessels, which have afforded so much satisfaction to the travelling public during the long period of 8 years, the contract has been in existence, are fully equal to the requirements of the age, and by a trifling additional expenditure in the way of coals, will, we have little doubt, furnish records that will be pleasing to the public press to notice. The renewed contract now entered into for a period of twelve months was wisely accepted, for it affords our Congress an opportunity of recognizing the right of the colonists to the co-operation of the American people in maintaining the service. For eight years it has been subsidized solely by the Colonies of New South Wales and New Zealand, notwithstanding the fact that Senator Chandler, in the year 1872, when he spoke as one of the representatives of the Government of this country, gave a solemn pledge in his place in the Senate "that substantial aid should be given when efficient vessels were placed upon the line, instead of the old worn out side wheelers then used by Webb." A reference to Senator Chandler's speech on that occasion will demonstrate the fact, that vessels such as the Zealandia, Australia and City of Sydney are of the tonnage and power pointed out by him as necessary for the service. Practical experience shows the wisdom and foresight of the Senator in the remarks then made by him, and the admirable and efficient manner in which the contract has been maintained clearly accounts for the great popularity of the San Francisco route over all others from the Australian Colonies. Instead of co-operating with the Colonies, however, Americans have been a drag chain upon the undertaking by levying toll for transportation of mails across the Continent of America and coquetting with the English Government to the prejudice of the colonists. This grievance has however been fully placed before the officials at Washington by Robert J. Creighton, Esq., representative of the New Zealand Government in this country. We hope to learn that his mission during the recess was productive of good. It would have afforded us satisfaction to learn that a deputation from the Colonies had arrived to represent their interests at the seat of Government during the coming session, but in the event of their non-arrival, we do hope that Mr. Creighton will be commissioned to go there and complete the good work he has so admirably inaugurated. Meantime considerable progress can be made in San Francisco towards carring out the object in view. The Board of Trade at its last Annual Meeting referred in the report of its President, Jacob S. Taber, to the importance of maintaining postal communication with the Colonies of Australia. Not only Mr. Taber but Captain Merry and other members spoke so forcibly on the subject that a resolution embodying their views was unanimously adopted. Now, however, is the time for active measures, and we confidently direct the attention of the Board of Trade to the importance of the subject, in the hope that our suggestion will meet with a hearty approval. Our conviction is that the Board of Trade should convene a special meeting at once and pass such resolutions confirmatory of their previously expressed opinions as will have influence upon Congress; that these resolutions be forwarded to the Senators and Members of the Assembly for the Pacific Coast, with a request that the united influence and advocacy of our Representatives and Delegates be secured in furtherance of the following objects.

1—A remission of the charges for transportation of mails across the continent.

2—To obtain an allowance for carriage of American and Australian mails out of the fund intended to be placed at the disposal of the Postmaster General.

3—To reduce the time for transport of the Australian mails from San Francisco to New York to five days.

If Congress would accede to the terms of such a petition, the New Zealand and possibly the New South Wales mail line would be placed next year on a firm and sound footing.

SORGHUM.

The Department of Agriculture, in its latest report, says; on sorghum in Tennessee: "Sorghum is doing better than corn and averages higher even in the driest localities. The crop will be a good one—a full average." In Alabama sorghum planted at the same time as early corn did well, but as the growth continues later than corn, it suffered from the severe drouth later in the season, when the early corn was beyond danger.

In Mississippi, sorghum, according to the same authority, promised well in September. Sorghum promises to become a very profitable and important crop in many States, but any further reductions in the duties destroys this young undertaking most effectually.

How it Works

The theory on which Free Trade was made the commercial policy of Great Britain was, that her artisans would furnish the world with manufactured articles and buy from other countries food and raw material. English manufacturers were to rule the markets of all nations and that people were to become at once the busiest and richest and most favored on earth. But time has shown that Free Trade instead of bringing independence and power to the country that adopted it, has brought about a condition of miserable dependence and insecurity. To support her population, she must buy $800,000,000 worth of food and $700,000,000 worth of raw material, and to help pay for them she is compelled to sell abroad not less than $1,200,000,000 of manufactured goods. Every discussion on tariff questions in foreign legislatures affects the fortunes of millions of British for good or evil. A proposed increase in a foreign tariff threatens some British interests with bankruptcy. A prospect of a foreign war alarms her government. She has a vital interest in the peace and prosperity, and in the doings of the legislature of every country and yet no power of control. The country that is ambitious to rule the commerce of the world is the most dependent of all nations. Even the trouble in Annam forebodes serious disaster to England should China become involved in war with France. This is the result of Free Trade and the attempt to make one country the workshop of the world.

In reply to a question as to the practicability of raising silk-worms in America Mr. John Ryle, the president of the "Pioneer Silk Association," said that he thought it could be done. The difficulty, however, consists in our inability to reel the silks, owing to the great skill necessary, the cheapness of reeling abroad and the higher rate of wages demanded here." Our California ladies think that they see their way to overcome these difficulties. We do not.

THE WINEPRESS AND THE CELLAR.

Phew! How's a Daniel come to judgment. The *Examiner* in its editorial column last week said:

California has more vineyards than Italy, and produces more wine than France.

The wine production of France before the phylloxera appeared was 1,500,000,000 gallons, and even since the phylloxera destroyed so many vineyards has averaged 700,000,000 to 800,000,000 gallons annually and is now increasing against an average of 40,000,000 gallons for the past four years in California. This year we have probably about 8,000,000 gallons. The statement regarding the comparative number of vineyards in Italy and California is equally absurd. The *Examiner* had better stick to Democracy and subjects it understands and let wine and vineyards alone. The *Examiner's* statement probably originated from the accepted fact that we have in California alone as much or a more or less suitable for vine-growing, as France, Spain, Germany and Italy combined, but this land is not so used now and may not all be for years. It would be as sensible in the *Examiner* to say that California has the population of France because there are nearly the same number of acres in both countries.

LOS ANGELES ITEMS.

J. De Barth Shorb, President of the San Gabriel Wine Company, informs us that the average falling-off in the yield of the untrained vines of Los Angeles county, owing to the unfavorable weather in the early part of the season, was nearly forty per cent. Such a result in that county has never been known since viticulture became an important industry. The young vines just coming into bearing, however, reduced the loss of wine, as compared with last year's vintage, to about 24 per cent. In the face of such results we cannot see how the total yield of the State can make even 8,000,000 gallons, unless Santa Clara and Santa Cruz yield from their young vineyards much more wine than has hitherto been accounted upon.

The San Gabriel Wine Company were large buyers of grapes this year, and crush about 300 tons more than in 1882, which makes the Company's product this year about 50,000 gallons more than last year or 150,000 gallons, counting brandy by its equivalent in wine, but this does not increase the total product of the county. This Company will this season, if everything is favorable, plant 1,000 acres of vineyard, in addition to what was done last year. The varieties chosen are Carignan, Mataro, Grenache, Riesling, Black Pinot, Black Burgundy and Lenoir. The Company is well equipped with live stock, and has purchased for its field work the finest mules in the State, a large band coming from the ranch of H. M. Larue, of Sacramento.

Mr. Shorb estimates that nearly 4,000,000 vines were planted in Los Angeles county last spring. Mr. Nadeau's enormous vineyard of two thousand acres, through which the Los Angeles and Anaheim Railroad passes, made an excellent growth in the latter part of the season. This vineyard is partly one and partly two years old.

There will be large additions made to Los Angeles vineyards in the coming spring besides what the San Gabriel Wine Company and the Hon. L. J. Rose will plant.

The Anaheim Water Company has determined to enlarge its reservoirs and ditches to meet the demands of this thriving colony for water for irrigation, and is in the market for a loan of $60,000 to $100,000 for a term of ten or twenty years. There are no better investments in California than irrigation companies, and Anaheim is the oldest and one of the most successful colonies in California. Its inhabitants are enterprising and have created in twenty years property of enormous value.

Lewelling's Prolific.

The following is a little fuller description than that we published last week of the new grape raised by Mr. John Lewelling of St. Helena, and named "Lewelling's Prolific: "It is a seedling from seed planted five years ago. Its canes are very short jointed, and it is a good grower; it is not inclined to run up, but will if staked. its leaves are deeply lobed and serrated. bunches rather loose, large and branching, and not shouldered; much like the Seedling Sultana in appearance; ripens about the middle of October; berries medium size; skin very thin; acid slight, not pronounced; taste much like Green Reisling. Its bearing power is immense; it bore the first year from the seed, and has done so every year since, increasing each year, until the fourth year it was as full as it could hold, and is also heavily laden this, the fifth year. It is healthy in every respect, showing no injury thus far from sunburn or other cause. The berries were sampled by the gentlemen present, and unanimously commended as of superior wine qualities. The bunches, we should add, look like Golden Chasselas so much as to be invariably taken for them until further investigation discovered the error. Samples of the cane and fruit, have been sent to Professor Hilgard of the University of California, together with the proceedings of the St. Helena Viticultural Association concerning this new grape, so that it may be published as a sort of official recording of the name and character of the new vine."

Laborers for the Vineyard.

At the last monthly meeting of the Santa Clara Viticultural Society the vexed question of the labor supply was discussed once more, and the announcement was made that a proposition had been received from an agent in Honolulu to furnish a supply of Portuguese laborers, he stating that there were many such laborers on the Hawaiian Islands who, on account of the heat and the character of the work they were required to perform there, would like to leave the Islands. Mr. Portal stated that he had some experience with Portuguese help, and found them industrious and faithful. They do not know much as yet about viticulture, but they will learn rapidly. Mr. Stockton said that labor was becoming very scarce, so that it was hard to obtain even Chinese,

and that they were demanding a considerable increase of pay over former years. Mr. Portal said that next year, one-half more men would be required to pick the grapes than this year. Mr. Stockton said that his Chinaman had become so independent that they refused to commence work before 7 o'clock, and in the evening they insisted on quitting at 6 or a little before. Mr. Coombe thought the solving of the problem of grape picking consisted in securing immigration of families willing to work. In Italy he had never seen a12-year-old boy but could pick more grapes in a day than a Chinaman. On account of the character of the labor, a rate per day could not be given, but fruit could be picked by contract or by the pound. A few years ago a few families from Italy came here and all found work at once. He was expecting a few more immigrants soon, when his theory could be further tested. Most of the class he spoke of would come with a little money to provide themselves with small homes. They would come without any special arrangement, except reliable information that work is to be had at a moderate rate of wages, say $20 per month with board, for an able-bodied young man, speaking some English and understanding the care of horses. These immigrants are especially desirable because they are anxious to establish homes and have no disposition to live in rented houses.

Wine-making at Barton Vineyard.

[Gustav Eisen in Fresno Republican.]

Mr. Barton began making wine in good time, somewhere in the middle of August, or as soon as the grapes were sufficiently ripe for claret, his object being to produce as much dry and as little sweet wine as possible. It is well known that he has been eminently successful, the wine produced being all that could be wished for. The following statistics of the yield, handed us by Mr. Barton, show that the first year's crop is quite handsome:

DRY WINES.	Gallons
Claret—First-class Zinfandel	32,000
Second-class "	2,000
Total claret	34,000
White Wine—Riesling, Burger, Feherzagos	8,150
Total dry wines	42,150
SWEET WINES.	
Port—Malvasia and Zinfandel	2,000
Muscatel	2,200
Total sweet wines	5,200
Brandy	2,000

Counting about five gallons of wine to one of brandy, this equals in wine gallons a total of 57,350, from a total of 360 tons of grapes, or 140 gallons of wine and 5 gallons of brandy per ton.

The process was the one used in some parts of southern Europe, the grapes being fermented without crushing, only stirred after fermentation is well set in. To our climate this process seems eminently adapted, a fact verified by the quality of the wine produced. The dry wines which we tasted were entirely dry, with no sugar left at all, and the red wines had a deep and fiery color, with a touch of that violet tinge so characteristic of the Burgundy. The strength of the dry wine varied between 11 and 13 degrees, in no case, we understand, over-reaching the latter.

The wines already bright and highly palatable, will soon be racked the second time and will then show their true value, which, judging from their present state, will not be likely to disappoint any one. Mr. Barton from the beginning has spared neither energy nor money to bring his vineyard to the high standard it has now reached, and while much of the success is undoubtedly due to the excellent wine-maker, who so well understood how to adapt his methods to new climatic conditions, still we believe that Mr. Barton is entitled to the largest share of praise him-

"THE WINE PRESS AND THE CELLAR."

A MANUAL FOR THE WINE MAKER AND THE CELLARMAN

A Few Press Notices.

[S. F. CHRONICLE.]

"The Wine Press and the Cellar," by E. H. Rixford, is a practical manual which contains hints and suggestions of value to the most practical wine-maker, while it gives ample instructions to the amateur vineyardist. It is the work of a man who has had experience in growing grapes and making wine in this State, and it therefore has not the fault of so many similar treatises, that it is written for climate, soil, and natural conditions at variance with those of California. The author has layed upon the literature of wine making for his materials, finding the most valuable suggestions in the French authors, but he claims to have presented here, for the first time in English, a complete guide to wine-making. The book is divided into sections, the titles indicated by a heavy-faced type, while a complete index still further assists the searcher after the facts. The book is well gotten up and ought to have a wide circulation in the country.

M. DENICKE,

Fresno, Cal.

...ed to examine the vineyard, the manage...ment of the same and the selection of the proper vines to make the wine. The latter, Mr. T. Mead, was absent on our visit, as we were informed, in Oakland under the care of a physician, with good prospects to soon restore to his health.

Mr. Barton is now engaged in staking all his vineyard, except the Muscats and a few other varieties which are known to do better trimmed low. The expense of this general staking is calculated to be some $3,000, but on the other hand the increase in yield will more than pay for the stakes the first season. Better and higher colored wine will undoubtedly be the result of the staking. The production of wine at the Easton Vineyard for the next four years is estimated as follows:

		Gallons.
1884	Wine	210,000
	Brandy	12,500
1885	Wine	355,000
	Brandy	25,000
1886	Wine	420,000
	Brandy	30,000
1887	Wine	560,000
	Brandy	40,000

At that time the vineyard will have reached its maximum yield, or eight tons to the acre, which certainly is not an overestimation for this part of California, where in many instances we have seen vineyards produce eight tons per acre the third year from cuttings.

We learn that Mr. Barton has already sold 20,000 gallons of his new wine crop to an Eastern firm at 26 cents per gallon, in the cellar, the buyer to pay extra for hauling and for casks. Since the above sale Mr. Barton has been offered 27½ cents per gallon for balance of cellar, but refused, holding for higher figures, say 29 or 30 cents.

Fruit Lands.

Mr. Leonard Contes, of Napa, writes as follows: The value of land in the vicinity of the San Pablo Bay is much under-rated, judging from what we see on rolling lands in Napa County, near Soscol, some ten miles from Vallejo. In the orchard of Judge Stanley, in this locality, we observed a few weeks ago Winter Nellis, Easter Beurre, and Beurre Hardy pears that could not be beaten anywhere in the State. Bartletts, also, in the same orchard were large, smooth, and as near perfection as could be desired. The same applies to plums and prunes, which are larger and finer generally, than those raised in hotter climates. There will be a good deal of orchard planting in Napa this season, principally in the rich lands around Napa City. We have no scale-bug here, unless it has been recently imported from elsewhere. It has been proven that those rolling lands referred to, near the bay and where fogs abound, are admirably adopted to raising the finest claret grapes. Not only this, but frost does not trouble vineyards in this location, and the hot winds so destructive in some parts are scarcely felt. Phylloxera is the only evil to be feared, and that may be overcome by the use of resistant stocks. Judge Stanly has a vineyard of twenty acres of three-year old Riparians, which the writer is under contract to graft next Spring. The growth of these wild Riparians is enormous, and experience has shown that not only are they resistant, but that they can readily be grafted, and at comparatively little expense. Now that Riparia cuttings can be had from vines raised here, there will not be the difficulty hitherto experienced of getting a good stand, whether in nursery or vineyard.

We have received from Messrs. Bush & Son & Meisner, proprietors of the Bush-berg vineyards and grape nurseries, Jefferson County, Missouri, an advance copy of the descriptive catalogue for 1883. It is a book of 150 pages, with several colored plates of notable grapes and a very large number of wood-cuts. The description includes all the varieties and hybrids of American grapes, with remarks upon their habits and ascertained best methods of pruning. It contains also special articles on grafting, planting, diseases, insects injurious or beneficial to grapes, on gathering, wine making, also, classification, notes, etc.

The remarks, as a rule, apply to the Eastern coast, except where special mention is made of the Pacific; but the book, though called a catalogue, is really an admirable treatise on American vines, and is well worthy of perusal by all who are cultivating or contemplate planting American or phylloxera resistant vines.

Training Vines on Walls.

EDITOR MERCHANT:—The thought has often occurred to me that grape vines might be trained on buildings in this country as in others, but it has been generally supposed that the sun would burn them. If trained on the north, east and southeast sides, there is no danger of this, at least in Napa, Sonoma, and similar counties. I have on my barn some Eastern grapes, as Ulmad, Missouri Riesling, Noah's, Virginia, etc., which are a perfect success. Mr. Gros Zinger, of Yountville, has on his large brick wine cellar several varieties of Vinifera, as Sweetwater, Gutedel, and some black grapes, which are now a sight wonderful to behold. Of course no frost touches them, and the fruit will hang on till Christmas. He has the main stem some 10 or 12 feet high, and then trains the canes horizontally. Much otherwise useless space may in this manner be made profitable, and the buildings beautified. This leads to the subject of staking in vineyards, and I firmly believe that the finest vineyards in California will yet be those that are planted wider apart, with more wood left in the vines, the canes being trained on wires in a horizontal position. The idea of tying up a bunch of canes to a perpendicular pole 4 or 5 feet high is crude, unnatural and untheoretical, according to the accepted axioms in horticulture. Leonard Contes,

Napa, November 8, 1883.

Correction.

We have a letter from Mr. George West regarding the exhibition of fruit at the office of the Viticultural Commission, sent from San Diego. The fruit was collected by Mr Wetmore from different places in that county and chiefly from El Cajon. The oranges and lemons came from the ranch of Mr. Higgins near San Diego. The raisins, apples and pears came from Clark & Cole, place at El Cajon. The main point, however, was correct; it was all raised without irrigation and makes a remarkable exhibit.

THE WINE MARKET.

No great demand as yet for new wines can be remarked. The vintage has been generally late and much of the wine is hardly through fermentation. Makers as well as buyers seem inclined to hold back. One of our jobbing houses, however, has already bought over 600,000 gallons of Wine at prices indicating an advance over last year's rates for wine of the same description. The entire vintage of Mr. Lawrent of St. Helena has again been sold to Lemmand Bros. on terms strictly private. We also notice considerable wine presumably, new, coming from Sonoma by the steamer.

The demand for brandy is less active than last month and particularly for that in "barrel" packages. [For Exports and Imports, see Merchandise Market.]

Discount to the trade.

PRODUCE MARKET.

The Imports and Exports given below are up to Wednesday evening.

FLOUR—
Receipts of week, 8021 8 qr sks
Extra, $5 62½@5 87½; Superfine, $4 00@4 62½; Country dittо, $3 65@4 00; Oregon, Interior Extra, $4 10@5 37½; prices held for jobbing parcels to local consumers, but round lots for export can be obtained for some what less figures.

WHEAT—
Receipts for the week, 427,420 ctls.
Under light receipts and the extreme firmness of holders, prices are at an advance. In the sample market no round lots of good No 1 shipping is obtainable for less than $1 40, and many owners have evidently firmly fixed their selling price at $1 60@2. The speculative element at sessions of the Call Board is not active, but holders of contracts for future delivories are very firm in their belief that prices will be, in the near future, greatly in their favor. On Call yesterday lots for No 1 White were as follows; buyer the season, $1 40¼, seller December, $1 55½, buyer 1883, $1 88; seller 1883, $1 86 per ctl.

BARLEY—
Receipts of week, 17813 ctls
During the past week the fluctuations in the speculative market have been unusually great—specially in the case of buyer the season contracts, which have varied in price from $1 08 to $1 16, and the changes in values during one session of the Call Board sometimes as much as 2c per ctl. Of late, receipts have been light, but stocks in city warehouses are liberal, and del vories before the close of the month will be increased.

By sample No. 1 Feed is quotable at $1@1 02½; brewing, $1 10@1 12½; Coast Chevalier, $1 40@$1 47½; Bay Chevalier, $1 50@1 60. Sales of No 1 Feed on Call yesterday included, on 100 tons lots, 500, $1 15¼; 100, $1 15½; 2500, $1 17½; 1100, $1 15⅝; 800, $1 15⅝, buyer the season, 100, $1 03⅝, seller 3, 200, $1 02½, 500, $1 03, 2000, $1 02½, seller December, 500, $1 03⅛; 2000, $1 03, seller 1883; 300 $1 03¾; 400, $1 03¼, 500, $1 03⅜, seller December.

OATS—
Receipts of week, 3115 ctls.
The steamer Geo W Elder is at hand from Puget Sound ports, with upward of 1000 tons of Oats an unusually large consignment—but the same cause assigned for recent heavy receipts—the cause a new crop in market rates, and only petty parcels can be bought at full rates.

We quote, Black, $1 45@1 50; White, $1 50@1 85 per ctl for common to extra choice.

CORN—
Receipts, 5675 sks
Arrivals from the southern coast are more liberal, but market wants are largely supplied by consignments from Nebraska. California yellow is quotable at $1 45@1 50; do white, $1 55; mixed Nebraska, $1 45 per ctl.

BUCKWHEAT—
Receipts of the week, 378 sks.
Market nominally quotable at $2 50 per ctl for good
Deliveries are more liberal, but no decline in prices noted.

RYE—
Quotations are more less nominal at $1 10@1 25 per ctl.

MILLSTUFFS—
Receipts of week, 10224 sks Bran, 1906; sks Middlings, 1682 ctls Ground Barley, 22 ctls Ground Feed.

We quote: Ground Barley, $2 to@25 per ton Bran, range for choice at $21 to@22 per ton. Wheat Bran, $17 50@18; Shorts, $20; Oil Cake Meal $30, Feed Corn Meal, $25@26; Cracked Corn, $30 per ton.

Two car loads of Cracked Corn were yesterday received from Nebraska, and further consignments there are supposed to be near at hand. The animals of Ground Barley from inferior malts are of such magnitude as to very complicate this effect in jobbing lots for sales by millers, purchasers securing a large portion of their requirements from agents of the interior millers

HAY—
Receipts of the week, 1365 tons
We quote Alfalfa, $7 50@10; Wheat, $13@$15; Stable, $12 00@14 00; Wild Oat, $13@$15, Oat, $13@14, Barley, $10@12 50 per ton.

STRAW—
Receipts of week, 198 tons
Quotable at 55@65c ₱ bale, as to condition.

SEEDS—
Receipts of week, 219 sks mustard, 1525 sks flax, 75 sks alfalfa.

Flax quotable at $2 50@2 75 ₱ ctl; Canary, 3½ @4c; Alfalfa, 9½@10c; Timothy, 7½@8c for ordinary and 8c@9c for imported; Mustard, choice Brown, $3 10@3 25 ₱ ctl; White, $2 75@3 00; Hemp, 4c; Rape, 3c@3½.

BEANS—
Jobbing trade of all kinds has been very dull during the past week. It would appear that we are in one of those cycles or cracks that come over the whole country periodically, for we hear the same complaints from all quarters of the Union and of course Beans suffer with the rest. All things considered it is a marvel how prices keep up so well as they have.

However, the bulk of the crops out of first hands at prices that will not allow their being sold at any profit to speculating dealers.

A sausage machine has been in use on Whites by those who have none, without much result.

Limas are very "sick" and if bring late in the season for them, we do not see how they can recuperate.

Colored do not show any signs of weakening. Pinks sell readily at quotations on Change. Bayos are more plentiful than they have been, although very fine, good quality are to be seen.

Reds are offered at 4c, with no takers.

Butters are in demand, no large ones have yet come to market.

Our quotations are, for round lots from the wharf. Small White and Pea, $3 20; Bayos, $3 40; Pinks, $3 20; Reds nominal; Butters, $3 90; Limas, $8 50.

VEGETABLES—
We quote: Carrots, 30@35c; Turnips, 75c@$1 00; Cauliflower, 60c@75c ₱ doz; Cabbage, 60c@75c ₱ ctl; Garlic, 2c@3c ₱ lb; Celery, 50c ₱ doz; Dried Okra, 25c@30c ₱ lb., Dried Peppers, 12c@13c ₱ lb; Tomatoes, 25c@50c ₱ box; Artichokes, 40c@60c ₱ doz, Green Corn, 8c@15c ₱ doz; Lima Beans, 4c@5c ₱ lb; Beets, 75c ₱ ctl; Parsnips $1@1 25 ₱ ctl, Marrow Fat Squash, 8c@10 ₱ ton, Mushrooms, 6@10c ₱ lb.

FRUITS—
We quote: Domestic—Strawberries, 8@0— ₱ chest; Apples 50c@75c ₱ box; Pears, 50c@$1 25 per box, Grapes, 40c@$1 00 ₱ box; Cape Cod Cranberries, $18 00 per bbl; Western do, $17 00@17 50 per bbl.

Tropical—Lemons, $6 50@7 50 per box for Sicily; Limes, $8 50@9 50 per box for Mexican; Tamarinds, 12@13c per lb; Bananas, $1 75@3 00 ₱ bunch; California Oranges, $2 25@2 50.

NUTS—
We quote: Cocoanuts, $6@6 50 ₱ 100; California Walnuts, 8@9c ₱ lb, Chili do, 8½@9c; California Almonds, hard shell, 9@9c, soft shell, 13 @14c, Filberts, 14@15c, Pecans, 12@13c; Peanuts, 5@5½c; Brazil Nuts, 12@13c; Hickory Nuts, 6@7c

HONEY—
We quote: Extracted, 6½@7½c, Ex White Comb 18@, White, 15@, Dark, 12½@.

BEESWAX—
We quote 28@30c per lb.

DAIRY PRODUCE
We quote Pond Rivers, 37½@40; Choice, 32½@@37½; Fair to Good, 22½@30, inferior lots from country stores, 16@17c; firkin, 30@32c for old and 24@@27½ for new, Eastern, Ese17c; Pickled Roll, 25@@27½; Cheese, California, 15@16c for choice; 11@@12c for Fair to Good; Cairo, in drums, 15@17c; Eastern, Ese17c; Western, 8@12c.

OLEOMARGARINE.—
We quote the range from 20 to 22c, according to package

EGGS—
We quote: California Eggs, Choice Ranch, 45 to 47½c per doz; Eastern, 32@35c.

HOPS—
Receipts of the week, 955 bls.

There is considerable business being transacted both for shipment East and export to England. Choice Hops will bring 20c to day. The market is in a great deal better condition than at any time since the season opened. Hops that a few weeks ago buyers would not touch even at 15c, are to day selling freely at 17@ 17½c, and the choice Hops are held for an advance, and growers would not sell them to-day under 22½c, and some will not sell unless they get 25 cts. We cannot say as to the wisdom of that course, but from present indications there is much prospect of them getting it. The New York market is in a very healthy condition, and has been steadily improving for some time.

ONIONS—
Exports, 11 ctls.
Receipts of week, 3348 sks
There has been no really first class some in for several days—choice would probably fetch 65c to-day.

POULTRY—
We quote: Turkeys, Live Gobblers, 17@20c ₱ lb; Turkey Hens, 17@20c; Dressed 19@22c; Young Hens, $5 50@7 00, Old Roosters, $5 50@6 50, Hens, $6 00@7 50; Broilers, $4 50@5 00, according to size; Ducks, $7 00@9 50 ₱ doz; Geese, $4 75 @5 25 per pair

GAME—
We quote: Quail, $1 25@$1 37½ ₱ dozen; Hare, $2 00@2 50, Rabbits, small, $1@1 25, cotton tail, $1 25@$1 50 ₱ doz; Teal, $1 25@1 50, Sprigs, $2 50@3 25; Widgeon, $1 25@1 50 Mallards, $3 50@4 00 ₱ doz; canvas backs, $4 50@5 00 per doz, common ship, $3 00@3 50 ₱ doz; do, English, $1 50@2 00 ₱ doz, Gray Geese, $2 50@2 75 per doz; White geese, $1 50@1 75.

POTATOES
Receipts of week, 5961 sks
Heavy arrivals continue from the River, has been the order of the day for these past ten days. It is several days since potatoes have been such a glut, for trade in them is very dull. Wharfingers are at their wits' end for room and are going after consignees to "move 'em." And consignees, having instructions to sell, do not know what to do with the accumulating stock.

We quote: Early Garnets 75c; Early Rose 40@50c; River Reds, 40@50c; Beauties, 75c; Cuffy's Cove, 90c, Humboldts, $1 75.

WOOL—
Receipts of week, 1417 lbs.
For Wool market see Wool Department.

HIDES, SKINS, ETC.
Heavy Salted Steers, over 55 lbs, 10@10½c per lb Medium Salted Cows and Steers, 50@55 lbs, 8@9c; Light Salted Cows and Steers, 30@50 lbs, 8c per lb, Salted Calf, 11c per lb Salted Veal, 12½ per lb Salted Calf, 15c per lb

Dry Hides, small selections, 17@——c per lb, Dry Kips do, 17@——c per lb Dry Calf, do, 17@21c per lb.

Customs Duties.

Duties paid at Custom House for week ending Nov. 22, 1883: Duties payable in United States gold coin, standard dollars or greenbacks:

Nov. 16, Friday	.....	$37,547 39
" 17, Saturday	.....	6,316 18
" 19, Monday	.....	7,297 93
" 20, Tuesday	.....	28,170 94
" 21, Wednesday	.....	32,023 95
" 22, Thursday	.....	32,371 20
Total	.....	$143,736 59

Meat Market.

BEEF—First quality, 8@; second quality, 6@c to 7½@; third quality, 5@6c ₱ lb.

VEAL—Large Calves, 6@7c; small ones, 8@9c ₱ lb.

MUTTON—Withers are quotable at 6c and Ewes at 4@——c ₱ lb, according to quality.

LAMB—Spring is quotable at 6c ₱ lb.

PORK—Live Hogs, 5¾@5½c for [hard grain hogs on foot; dressed, do, 7¾@7½c.

PORT OF SAN FRANCISCO.

Exports.

Principal Exports by Sea for the week ending November 21st.

Louisiana Sugar Crop.

The Department of Agriculture in its report for September, just published, says of the Louisiana sugar crop. The rains in July unde sugar cane grow, but the grass grew also, and it was generally plowed out wet, which left the field cloddy. The cane roots were cut by the plow, and the drought which it succeeded stunted the cane, and it did not commence growing again until after the rains in the middle of August. It is feared that the new growth will not mature before frost, and will thus lessen the quality and quantity of the sugar made from it. Later news from Louisiana: Since the cane was crushed, it is more favorable than might have been expected from the above.

We sometimes hear expressions of doubt as to the worth of experts' appraisements of the value of real estate. As an instance of their accuracy, which made by competent men, we may mention the Court House block on Clay street, near Kearney. General Cobb, for the persons in interest, valued it at $90,000. A few days ago this gentleman sold it at public auction for the exact sum at which he had appraised it eight or nine months before.

MERCHANDISE MARKETS

[Prices given below are for car load lots and all-rail rates unless otherwise noted.]

COAL

A very strong disposition among the largest holders of cargoes here, and en route to combine establishing prices, has displayed itself this week, and at present great unanimity exists and hence asking prices have been further advanced. There is a limit to a much further advance, as the Coast Collieries are straining their every energy to increase their output, besides they have every facility for cheap transportation in the shape of disengaged tonnage, any quantity of vessels being promptable to make their round trip at $2 50 @ 2 75. At the same time there are not very encouraging prospects for any material reduction for several months to come, as vessels will not think of coming at the present rates for round hard grain freights and our local colliers arrange their tariff according to the cost of foreign Coals as ruling.

Importers prices of coal Foreign and American, to arrive: Australian $8 00 @ $25, Liverpool Steam, $8 00 @ $25, West Hartley, $8 @ $, Scotch Splint, $7 50 @ $, Cardiff Steam, $7 50 @ $, Lump Lehigh, $13 @ $13 50, Egg Hard, $13 @ $, Cumberland, Lump, $10 @ $10, Egg Hard, $10 @ $, Cumberland, Lump, $12 @ $, Egg Hard, $12 @ $, Scotch Splint, $7 50 @ $, Liverpool Steam, $9 00, West Hartley, $8 @ $, Scotch Splint, $9 50, Cardiff, $8 00, Lehigh Lump, $13, Cumberland, bulk, $11, Egg Hard, $11 00.

SPICES—

We quote: Black Pepper, 15 @ 16c; White Pepper, 22c @ —; Allspice, 12 @ 15c; Cloves, 22 @ 27c; Cassia, 9 @ 10c; Ceylon Cinnamon, 45 @ 50c; Ginger, 8 @ 15c; Nutmegs, 65c @ —; Mace, 60c; Borneo Ginger, 16 @ 18c.

SUGAR—

RAWS. Since the decline in refined Sugar we have had no quotations for keg Sugar, as but very little has been sold; but this week the sales have been sufficient to make a price, which is ¼ cent above the parity of Refined according to the old standard. The reason of this is that the keg Sugar is very popular, and we do not receive enough in this market to supply the demand. The sales of the week comprise 911 kegs at 8¾ c and 866 bags at 7¾ @ 8c.

REFINED.—The local demand continues good while the New York market is quiet, with no demand.

We quote New York prices yesterday, A crushed 9¾ c, Granulated 8 1-16c, and Standard A — @ 7⅝, Yellow C 6¼ @ 7¼ c.

We quote local refinery rates, prices subject to change without notice.

(A) Pat Cube Sugar, in bbls, 10¾ c; (A) Crushed Sugar, 10¾ c; Extra Powdered sugar, in barrels, 9c; Fine Powdered sugar, in barrels, 10¼ c; Dry Granulated sugar, in barrels, 10¼ c; Extra Granulated sugar in barrels, 10c; Extra C 10½ c; Golden C sugar, in barrels 9c; sugar in barrels, 8¾ c; Extra Fine Powdered, in bbls, 11¼ c; Confectioners' (A), 10c; El Dorado C, in barrels, 9¼ c; Mariposa C, 8¾ c; Nonpareil, 8¾ c; half barrels, ¼ c, and boxes, ½ c, more for all kinds.

Freights and Charters.

A trip along our wharves and around the Bay tells something about the condition of the Freight market, without looking at the figures. Yesterday we had about 68,000 tons chartered for grain in this port, besides about 3,000 tons at Wilmington. At the same period last year, tonnage under charter for wheat was about 45,000; of vessels engaged for other foreign business, there was about 15,500 tons against 6,000 tons at the same time in 1882. It is the disengaged list, however, that presents the most remarkable figures. We had on Wednesday morning 112,800 tons of shipping waiting for wheat charters, besides two ships at Wilmington, against 68,700 at the same period last year. With a large loading fleet and so extraordinary an amount of tonnage waiting for bushess, it is not surprising that charterers are getting vessels on their own terms. On the other hand, however, we have only 202,500 tons listed as on the way to this port and 6,500 to other California ports, or a total of 209,000 tons, against 240,500 tons at this period of 1882, and 304,000 in 1881. But, again, we have not the amount of surplus wheat that we had in 1881.

Since the above was written, a few vessels have cleared and sailed, but more tonnage has come in. Since the days of 1849-50 there has been no such number of deep sea vessels in this port as could be seen yesterday. In those days there were three or four times as many, but most were old and nearly worthless tubs. To day the cost and value of the sailing ships in this harbor of 1000 tons and over exceeds the aggregate value of vessels of the same class ever seen at one time in any port of the world outside of Great Britain, Calcutta in its palmy days alone excepted. Farmers are having it all their own way. Yesterday a dozen first class iron ships could have been engaged at 32s 6d for Cork U. K. for orders; this would make the price of wood for Liverpool direct barely 27s 6d. British shipowners are sweating blood at every pore, and even at the extraordinary figures quoted above, charters are not easy to obtain, for nearly all our regular shippers have vessels engaged and now lying here, for which they cannot buy wheat and see a prospect of profit. The cause of this loss to ships was those hot northers which so seriously curtailed our wheat crop after ships to transport it had been ordered to this port.

Olive Oil.

The olive oil of Smyrna, according to an official report, is rudely pressed and carelessly prepared, so that it is not suited for the table, but only for ordinary purposes, yet it finds a ready market in the North of France, England, however, is the largest consumer, followed by France, Germany, Holland, Italy, Austria, and Russia. It is exported in barrels, which contain on an average five hundredweight, or sixty-three imperial gallons. The export varies greatly according to the crop. In 1879 it reached 6,550 tons, valued at £261,440. The following year it fell to 310 tons, worth £11,184, but rose again in 1881 to 4,200 tons, and in value to £135,336. Olive oil is of three qualities. The first comes from Aivali and Adramyt; the second from Mitylene, which is inferior only on account of its greenish hue; the third quality from Aidin and Scaindyr. All three qualities are also produced in the neighborhood of Smyrna. On the spot the oil of Anatolia may be worth 8 or 9 medjids (26s. 8d. to 30s), the quintal (124 pounds), but at Smyrna, owing to the cost of transport, duties, barrels, etc., its price rises to £34, or even to £40 the ton. The annual average crop exceeds 200,000 quintals, or 11,000 tons, and the larger portion is consumed in the country.

California Sugar Refinery.

OFFICE 327 MARKET STREET.

West View of the New Refinery Building.

A. D. BELL ..... Editor.

FRIDAY ..... NOVEMBER 23, 1883.

The *Northwestern Grocer* is bringing to light some of the tricks in the vinegar trade as conducted in the Western States. Such exposures of fraud are decidedly beneficial to consumers.

Half a dozen of the dime-novel writers and melodrama builders will go to work on "Black Bart" as soon as our dailies reach the East, and the scoundrel, thanks to our press, will become as popular as "Buffalo Bill."

From each ton of beets worked by the Alvarado Sugar Company in October, was produced 111 4 pounds of white sugar, selling in this market for $14.87. The beets to make this sugar cost $5, this leaves $9.87 besides the secondary products and refuse, to pay the expenses of manufacturing, transportation to this city, commissions, etc: and interest on capital.

Practical Men for Legislators.

Next year there will devolve on our Legislature the duty of electing a United States Senator; and aside from party politics, the productions, commerce and general welfare of the State will be more or less affected by the choice. One of the greatest drawbacks to sound legislation, either National or State, on questions touching the material welfare of the great body of the people, has arisen from sending so many lawyers as our representatives. As a rule lawyers do not understand or care much about those pursuits in which the mass of the people are engaged. Politics, mere party politics, patching and amending and adding to laws which, though important to litigants, have nothing to do with the daily bread of the masses, engage their attention. Hence, as a rule, they are the poorest of legislators to represent a people following manifold industries. Indeed, so far has this evil spread in this country, as to a less degree in Great Britain, though even there it is loudly complained of, that we should like to see a constitutional barrier imposed against States selecting more than half their Congressmen and Senators from the legal profession. A farmer, a manufacturer or a merchant, natural intelligence being equal, will be a far better law maker than an ordinary lawyer. A few men skilled in legal lore and in the technical construction of language, are useful in any legislative body; a majority of such is decidedly a pernicious and dangerous element. This State and especially this Congressional district, has done better than some of the States. We have been represented in the Senate by Mr. Booth, a merchant, and are now represented by Gen. Miller, who is interested in a great commercial enterprise, besides having large personal interests in one of our leading viticultural counties. In Congress we have had Charles Clayton, a commission merchant, and Horace Davis, a miller all these did better for us than mere lawyers ever do. But commerce and manufactures are not the foremost enterprises in this State. Agriculture in its various branches stands ahead of all. Wheat, wool, wine and fruit engage the attention of more persons than commerce and manufactures; and soon they will pass them in the aggregate value of capital employed, if they do not already do so. And of these four fruit is destined in a few years to take the first place, and hold it against all competitors, unless it be wine. Therefore, the next man chosen to wield half the Senatorial power of this State should come from the orchard, the vineyard or the farm. We may have to thank such a man for fewer amendments to the Revised Statutes, but we would have more intelligent and more practical legislation.

BLOWING HOT AND COLD.

The *Chronicle* is not only malicious but inconsistent in its consistent fury against everybody and everthing connected with the Hawaiian Islands, or with sugar. On Thursday week it had a sensational article founded on the affairs of an American company that had not succeeded in producing on its Hawaiian plantations as much sugar as was expected. This week it is berating the treaty on the ground that it will lead to the production of too much sugar. The *Chronicle* reminds us of a malicious drunken individual, who, going home late one night, swore to himself that if his wife was waiting up for him, he would beat her for wasting fire and candle, and if she was in bed, he would lick her for neglecting his comfort. Nothing that his wife could do would please that fellow any more than anything done in the Islands will please the *Chronicle*. The *Chronicle* is mad because the Islands having about reached their full capacity only produce 60,000 tons, while the *Chronicle* has said again and again they would produce 150,000 tons: and within a week it again attempts to terrorize the United States with predictions of the enormous amount of sugar they are going to produce.

If the Islands could produce 150,000 tons, it would not be the equivlent of what Louisiana produces or one-fifth of what we import from Cuba. But the fact is, that it is in only spots favored by easy access to water for irrigation, that sugar can be profitably grown except by an enormous expenditure for storage reservoirs, pipes and ditches. The first attempt on a large scale to utilize a dry plain for sugar growing, according to the *Chronicle*, has not realized the expectations of the investors. If the *Chronicle* is an authority it never will. But the *Chronicle* of a Thursday and the *Chronicle* of a Monday are equally unreliable. Its statements regarding the affairs of corporations are as deeply dyed in malice, as those relating to the future of the whole country. Their flat contradiction of each other, however, renders them harmless.

Young as railroad enterprises are, hardly half a century, their aggregate value far exceeds that of shipping. Great Britain own vessels valued at $1,000,000,000, but the railroads within the three kingdoms are valued at $3,700,000,000. If the United States has much less capital invested in ships than Great Britain, she has nearly twice the amount in railroads, namely $6,300,000,000.

That it is not patriotic at a French table to offer guests German waters.

That Borrick's idea of a grand Industrial Fair in this city is a good one.

That even Republicans rejoice over the defeat of that miserable trickster, Mahone of Virginia.

That the opening sentence in the first editorial in last week's *Argonaut* contained about 230 words.

That the United States has 44,512 postoffices, and Great Britain only 14,918; Germany has 11,088, and France has only 6,158; but Japan has 5,094, and leads European nations other than those mentioned.

That the steel-rail business in the United States has been sadly over done. Every millionaire in the country wanted a steel-rail mill, and yet one and a half of them wish they had not.

That "distrust" of insiders and rings has as much to do with the dearth of business on the Stock Exchange of San Francisco and New York, as the meagre prospects of the mines.

That the Starr Mill Company will allow no saloon to be established on their property at Wheatport in the straits of Carquinez. They want no repetition of Port Costa experience.

That it is said the Postmaster General is not clear on the subject that "patent outsides" are self sustaining newspapers and entitled to the facilities granted "second class matter."

That when a joint stock company does not pay promised dividends, somebody is bound to be abused. Somehow, stockholders have an idea that the directors have guaranteed them enormous profits, whether the business makes it or not.

That the excess of exports of the United States continues very large and is increasing. For the year ending June, 1883, it was $100,652,742; for the past nine months of 1883 it is $50,000,000 more than the excess of the same period of 1882.

That Governor Stoneman has acted with good sense and discretion in declining to call an extra session of the legislature. The democracy ought to thank him for turning a deaf ear to the frantic appeals from interested quarters.

That we need not expect that the United States mints will continue to coin five-cent nickels in face of the demand for silver coin, now that Churchill county, Nevada, has a nickle mine which knocks the monopoly out of that Pennsylvania mine.

That every man who owns an acre of land should plant some trees, and those who own thousands, should plant hundreds of acres. A man over 50 years of age may hope in time to see a forest of his own planting, so rapidly do trees grow on this coast, if cared for, the first year or two.

That the autocratic pretensions of the Astors are two generations old, of the Gould's half a generation—that is the difference. But autocracy based on finance in gathering rabbit skins by aid of a wheelbarrow should be more than two generations old before it boasts of blood—unless it relies on the integrity of the rabbit skin man, and not on the wealth of which he laid the foundation.

That for a daily paper that publishes a full descriptive account almost every day of some prize fight, slogging match or knock out, with free advertisements of the lowest drinking dens in town, to point out editorially the evil influence of these brutal exhibitions in the very apex of check. These things being admittedly bad, why not keep descriptions of them out of the local and telegraph columns? The daily press of this and other cities is the worst enemy of public morals.

The fine new iron steamer the "Kenau" built by Cramp & Sons for the S. G. Wilder Steamship Co., reached Honolulu ahead of her allotted time and travellers visiting the islands for business or pleasure will avoid all the discomforts hitherto incurred in passing from one island to another. With the Oceanic S. S. Company's vessels the Mariposa and Alameda and Wilder's new interisland steamer, the Hawaiian Island ought to be more than ever a favorite resort.

That for the protection of regular travellers on the bay and river passenger steamers, all these boats should have water tight bulkheads, or in some other way be made as buoyant as life boats; as they carry no cargo below deck, there is no more reason why they should not float with a hole in the sides as big as a church door. They can be made at a moderate cost as safe as a life boat. The Central Pacific on its Oakland ferry is, we believe, the only Company that thus protects its passengers.

That we never heard that Earl Derby, H. B. Maj. Colonial Secretary, was addicted to immoderate drinking. But we have the authority of the well known San Francisco correspondent of *Bradstreet's* for this statement: "Derby combines with great ability at least one vice which sometimes renders him incapable of sober thought. His threat to use the Queen's ships to suppress the exploration and colonization of New Guinea never could have been written by a sober man." The Salvation Army and Blue Ribbonites should go into encampment on Downing street.

Fish are said to be scarce in the bay and it would seem to be so, from the fact that sea lions and pelicans do not frequent it so much as in former years. The Fish Commission are doing well in stocking the rivers with shad and other edible fish, but the Chinamen with their fine meshed nets take out the young fry with the shrimps, dry them and ship them to China. If Congress would suspend the export from this coast of powdered shrimps or fish of the size of sardines or less, in two years the bay would be alive with fish. The legislature also might improve the State law by throwing the expense of prosecuting offenders against the fish laws on the State instead of the county. County officers are deterred from making arrests on the ground that it incurs large expenses for the county and any sums levied as fine, on conviction, do not reach the county treasury.

The Consul at Moscow writes that the Germans are counterfeiting American trademarks on tools of many kinds. The tools are very inferior, and can be sold much cheaper than the genuine American articles. This interferes with American sales, as the Russians look only for cheapness. The consul says the Germans are the worst culprits in this counterfeiting business.

One of Commissioner Loring's prizes of $1,200 for the best essay on beet-sugar making, etc., was granted to Mr. E. F. Dyer, the son of Mr. E. H. Dyer, President and Superintendent of Alvarado B. S. factory.—*Sugar Beet, Phila.*

RETAILERS' CORNER.

Trade at present is not very brisk. The fall trade is over and the holiday business has hardly commenced. Our jobbers all have their stocks of Christmas goods laid in, but retailers have not commenced to buy to any extent. The export trade, however, is very good, and the different regular steamers which sail from this port all go out full.

SUGAR.

The demand for Sugar during the week has been good, though the New York market is very dull. Keg Sugar is held higher, in proportion, than before the decline in refined. The reason of this is, that the supply of keg Sugar is not by any means equal to the demand.

COFFEE.

The supply of Central American Coffee is being rapidly diminished, and the stock is now only 8,000 bags. The Eastern demand, as well as that for local consumption, continues brisk, and at the present rate of withdrawals the stock will not last over a month. Prices remain steady and very firm.

RICE.

The Rice market continues in a very poor way. Dealers refuse to allow that there is any further decline, but still on large orders or on close competition, prices are shaded more than they would have been last week. Hawaiian holds its nominal price, but of a sale made this week which was considerably below the regular price, but the Rice was reported to be of inferior quality, which accounts, to some extent, for the low price. The Eastern demand for Hawaiian still continues good, as present prices allow a reasonable margin.

CANNED GOODS.

There is little worthy of note to say in regard to Canned Goods, as the packing season is over and stocks have been very much reduced by large sales early in the season. The trade is now mostly of a retail character, and so very little can be said of it. The packing of Tomatoes has been large, notwithstanding the short crop anticipated early in the season. In the Eastern States a great deal is exported from Oysters, as the supply is not excessive, and very little is expected to be packed in Maryland during the coming season. Something will have to be done to protect the Oyster culture of the Chesapeake, and we believe the heroic remedy of stopping Oyster dredging for a term of years to be the most efficient method of reviving the Oyster crop. The Salmon trade is very dull, there being no sales outside of small lots of special brands.

DRIED FRUITS.

This trade has about reduced itself to a retail trade for the time being, but foreign fruits and peels are in demand for holiday trade. Turkish Prunes are held at low rates and sales are large.

CANNED CORN.

The corn-canning business, especially in Maine, is one that is constantly growing in importance, and new factories are being erected every season. In 1882 there were ninety-seven corn-canning factories in operation in Maine, and this year the number was fully one hundred. Although some of the large factories have as many as three hundred and fifty acres each planted for them, and in some cases four hundred acres, the average is not above 150 acres to each factory, or 15,000 acres of sweet corn for the entire State. A good average yield of sweet corn per acre is not below 1,500 cans, and experts place the yield of the State this year at 12,000,000 cans. The entire area in corn this year in the above State was 12,500 acres, and from the growing demand for Maine canned corn it is probable that a large proportion of land will be planted to sweet corn and a smaller to yellow, next and each following year.

The Alvarado Beet Sugar Co.

We learn from the *Sugar Beet*, Philadelphia, that this company has decided to start a dairy, which, if properly conducted, must become a great source of profit. That journal says:

"The intentions of the Alvarado company are to experiment with 150 cows. If we suppose their average daily consumption to be 15,000 pounds during a period of five months, it would require 2,250,000 pounds of pulp to supply the demand, but as their will be worked no less than 10,000 tons of beets, the refuse from the same will be about 8,000 tons, or 16,000,000 pounds, enough to feed 1,000 cows during five months, or 500 the entire year. As the pulp can be silotted and kept in a perfect condition for a considerable period, the feeding can continue long after the sugar campaign is ended."

BAD TEA.

We do not think that there was ever any large distribution of bad or adulterated tea on this coast, but consumers rejoiced in the late act of Congress excluding it from the United States. It seems that on the eastern coast exclusion does not end the evil. The *German-American Grocer* says:

When Congress recently passed a law prohibiting the importation of adulterated teas, the public supposed that hereafter they would know what they were buying when they bought tea. But it appears that the time for rejoicing has not yet arrived. According to the New York *Herald* there is still on hand an immense quantity of adulterated and bogus tea, which has been accumulating here ever since England refused to receive any more of it. The holders of this stuff are not going to throw it away, even if they go to church and "get religion." They are going to unload it on retailers or consumers, until every fat of it has filled American teapots, unless the State s—New York is among them—which have laws against adulteration proceed at once to protect the dig stions and purses of hundred of thousands of families. Dirt and dye stuffs are good enough in their place, but that place is not the teapot. Even if it were, they could be bought at ten times less than the price of tea.

Has Gained by Publicity.

The *American Register*, New York, says:

"The people of the Hawaiian Islands are fully vindicated. Good faith on their part has been strictly observed and the treaty vindicated."

It then goes on to point out the gain the Island interests have made by the publicity of the attacks. It says:

"Public opinion has been fully called to this important subject, and it is now understood in its true bearing and merits. This is the most important of all the treaties of the United States with foreign nations to the future greatness of this country. It is essential to the supremacy of the United States in the commerce of the Pacific Ocean. The Sandwich Islands furnish the key to the commerce of this great ocean. It is essential that the United States should control them, and not allow them to go into the hands of England, France, or any other rival commercial power. In 1876, when this treaty was made by the authority of Congress, it was made perfectly clear, that in order to protect the interests and commercial supremacy of this country on the Pacific Ocean, the Sandwich Islands would have to be *annexed* to the United States, and governed as a part of our country, or otherwise a close alliance made with them by a reciprocity treaty which would secure the control of them and guard them from the control of any other nation. The Government wisely makes this reciprocity treaty in preference to annexation, which would have been an immense burden and expense to this country. The treaty secures to the people of the United States vast and growing reciprocal advantages in trade and business. But the great object of this treaty is the control of our people on the Pacific Ocean and our trade with the immensely populous countries on the other side of this ocean.

The Profession of Politics.

Although we all appreciate politics at its true value and exercise our franchises, nevertheless there has grown up under it a class which is in no sense representative except of its ilf—and which has created a trade or profession almost as distinctive as that of a butcher or physician. It is that of polhtical lawyers and politicians. They are the men who fill the elective offices. Whom do they represent? A man must have rare intelligence and ability to legislate wisely upon matters with which he can scarcely claim even a cursory knowledge. And few, very few of these legislators can claim that distinction. They are notorious rather for their ignorance of anything save machine politics. They are not specially conversant with the condition or needs of any one great branch of industry in this truly industrial country, and yet they crowd the benches of State or National legislatures to the exclusion of the real representatives of commerce, manufacture and agriculture. So few indeed are the representatives from these classes that legislative committees are sent up through the country to glean information and obtain knowledge which, were legislatures truly representative, could be found within their own halls. It is evident, therefore, that politics has become a business which a few follow for a living, but of which the many know nothing about.—*N. Y. Maritime Register.*

Rumored Sale of the Mexican National Railroad.

A Texas exchange says that work on the extension of a branch of the Sunset Railway into Mexico has been stopped, and the forces will be removed to Texas and given work on contracts there, one of which is the completion of the road running from Gonzales to Harwood. It is to be extended at once. The report is that C. P. Huntington, President of the Southern Pacific syndicate, has bought the Mexican National Railway.

John Burroughs calls Herbert Spencer "the intellectual clearing house" of the nineteenth century.

Trade Failures.

There were 219 failures in the United States reported to *Bradstreet's* during the week ending Nov 10th, 24 more than the preceding week, 50 more than the corresponding weeks of 1882 and 1881. Compared with the previous week the middle states had 41, a decrease of 11, New England states 29, a increase of 10, southern states 34, an increase of 3, western states 99, an increase of 37, Pacific states and territories 16, a decrease of 15, Canada 52, an increase of 5.

A general feature of the week has been the failures in the lumber trade in Michigan and the paper trade in Illinois and Wisconsin. The important failures reported were as follows: Lumber—Bedford, Sawyer & Co., Kalamazoo, Frank Chickering, Wetzell Brothers, M. J. Bond, Porter, Byrne & Co., and Simon P. Swartz, Grand Rapids, Newton Jackson, South Bend, Ind. Paper—Rock River Paper Company, Chicago, and Beloit, Wis.; Binman, Moody & Co., Beloit, Milan Paper Company, Milan, Ill. The Clyde, Ohio, Banking Company, Rice & Messenger, bankers, Cadillac, Mich.; The Danville Steel Company and Peter Baldy, dry goods, Danville, Pa., C. H. Tilton, shoe manufacturer, Ashland, Mass.; J. S. Cohn & Co., manufacturers of furs, New York. In the principal trades they were as follows: General traders 32, grocers 30, clothing 11, manufacturers 14, liquors 10, hardware 10, tobacco and cigars 9, lumber 9, shoes 8, harness 7, hotels and restaurants 7, dry goods 7, produce and provisions 5, grain, flour, etc., 5, drugs 4, furniture 4, carriages 3, butchers 3, bakers and confectioners 3, stationers 3, paper 3, jewelry 3, hats 2, mens' furnishing goods 2, commission 2, banks 2, iron and steel 2. The number of failures in the western states is the largest, with no exception, for any single week during the past three years.

TOBACCO MARKETS.

SAN FRANCISCO.—Trade in plug and other manufactured tobacco has been quiet for the past fortnight. Our list of such manufacturers as Lorillard, Finzer and others at the Missouri and popular brands are fully established and dealers need not order to meet their wants without buying over prices. Over some of the outside brands of less widely known makers there is still a disposition to cut and carry to customers.

The leaf market has been unusually dull during the past week, whatever inquiries have been made have been for goods not here, as instance, Havana fillers and wrappers and choice Sumatra 81. All other kinds have become a dead letter. Domestic 82 is arriving freely and after New Year there will probably be a very brisk market for several weeks.

Local cigar manufacturers report plenty of orders on their books at fair prices as profits rule now. Those dealing with the country complain in some cases of slow remittances.

Last week we reported the commencement of the Seal Rock Tobacco Company's troubles. Since then Mr. Jones has petitioned and obtained an injunction against the company dealing with the property in any way. The application appointing a receiver is to be argued to-morrow. Meantime, Sutro, a private banker of this city, has attached the property of the company for $13,000 for money loaned. We hope that this local enterprise, in which so much interest has been taken, will surmount all difficulties and yet become a financial as well as a commercial success. Skill and capital have it in their power.

[U. S. Tobacco Journal.]

NEW YORK, Nov. 10th.—It was oppressively quiet in the market, and brokers with their characteristic facility for arriving at conclusions in jerks, claimed the stillness and inactivity to be due to the fact that there is nothing decent in the market, which brilliant allegation permits the interest that everything there is in the market is deplorably and confoundedly indecent to an excessive degree. Quantity mortals harbor different views. Manufacturers have provided themselves with 82 tobacco, and the cigar business long on the eve of holiday trade, is not conducive of inspiring extensive purchases. Before this year closes our market will experience another rush for leaf tobacco, and whatever good there is will bring high figures. As yet the general opinion for 82 tobaccos are much lower than those ruling in the growers' sections for crops of 80, and dealers in the city wonder why manufacturers do not make a desperate fight for all the 82. The wise calculation is as follows: There is a certainty that little good is left of the 82 crop, there is a certainty that the 83 crop is in size no larger than, if as large as, its predecessor, there is a certainty that a good portion of this crop is very poor, there is a certainty that the manufacture of cigars cannot decrease, and still there is no rush for old tobaccos, and as to the 83 crop—that of New York State and Wisconsin, the packers hesitate to invest in. Why do they? Because the manufacturers rule the leaf market, and Sumatra acts like a safety valve to high prices. Sumatra, Connecticut or other packers buy the green tobacco (as it is in bulk to large manufacturers, its jobber is with them a secondary consideration). The large manufacturer is gradually taking his supply direct from the grower, being gradually making the tobacco trade cigar manufacturer follow suit. So, therefore, this outlet for the packer is becoming choked to the edges. The jobber, then, the second in this endeavor in business and in profit, but the jobber, too, when he has money, takes a great supply direct from the grower, and only buys from packers who in the latter's interest are hoarding, unload, and then comfort themselves with rakes of profits or bulks of losses. The financially lame jobber, of which there is no alarming sufficiency, no one cares to touch. The speculative jobber will buy them even really remain unsalable on the books. But, notwithstanding all these letters to the successful career of the packers, they, in a certain degree, could force the manufacturers and the jobbers to central their purchases in the country by fixing prices, here, they meet the unsurmountable barrier of Sumatra tobacco with price exchange, said bar to admittance of 26 to 30 per cent.

[New York Tobacco Leaf.]

AMSTERDAM, Oct. 29th.—Messrs. Schapp & Van Vorst report as follows: With the sale of 12,411 bales Sumatra, before us this week, the crop and stock in imports for Amsterdam is closed. It will be until the beginning of March, 1884, before the new crop can come in the market. The crop just for these last bids were as high as ever, while for lots containing fine brown colors the competition was very strong, and prices went up as high as 54 to 56 Dutch or round lots. The round figures of the whole crop, amounting to 104,000 bales, come to 84 to 85, making a total amount of 20,000,000 guilders.

JOBBERS' PRICES.

Pulled wools are largely used in the manufacture of flannels and one reason of their being so used is because the process of pulling either by burning or sweating destroys the felting properties of the fibre and so better fits it for use in flannels which will not so readily shrink in washing.

Early Australian clips are being sent direct to Boston by steamer and are readily sold. Australia may prove a dangerous competitor for both California and Texas.

Merinos as Mutton Sheep.

John L. Hayes, on the "Bulletin of the National Association of Wool Manufacturers," says:

The first demand of humanity is for something to eat; the second, for something to wear. The first knows no exception, the second, very few exceptions, and those confined to the rudest people, inhabiting the mildest climates. Thus the paramount consideration with the economist who studies the interests of a great and growing nation, is how best and most economically to feed the masses. A well-fed people are usually an easily governed people; while hunger and want bring in their train defiance of law and invasion of the rights of property.

Those who have devoted most attention to the subject, have long recognized sheep as an important factor in the meat-supply of the more advanced nations. Mutton comes within reach of the poor man's means, while money can buy nothing better for a rich man's table. The fact of its cheapness and the habit of its use are taking hold upon our people, as they already have upon those of Europe, and will go and grow with the children of the present, as they dot our frontier with new homes, and add the results of their labors to the monuments of progress that mark the march of empire. As practical men, it is given you to meet the questions. How is this taste for mutton to be fostered? and, How is the demand it will create to be supplied? To the first I reply, by placing within reach of every family where mutton at a price suited to the purse of the poorest, and to the second I reply, Make the Merino sheep produce the flesh to feed the million, as well as the wool to clothe the million.

Those who have studied the results of the past fifty years need not be told that this can be done. There is nothing wanting but a recognition of the necessity for action and a preconverted determination that the object shall be accomplished. After patient and careful study, I am forced to the conclusion that the prevalent idea of superiority of flesh of the so-called mutton breeds, considered aside from artificial influences, is founded more upon sentiment than reality. Naturally the flesh of the Merino is as sweet and nutritous as that of any sheep.

If you think nobody cares for you in this cold world, just try to learn the fiddle in a populous neighborhood.

Affinet for Fall Shearers.

Jos. M. Wade of Boston writes to the *Texas Wool Grower*:

I enclose a lock of fall clip Texas wool which I this day took from a sample of a clip sent from Texas. I would like to ask, Mr. Editor, what is the use of clipping sheep in the face of winter when the clip obtained is but one inch long. The uses to which such wool can be put are so limited that it never can bring its full value in any market. It was fine enough it might be sent to England and used in the "broadcloth" trade; but further would it be to let it remain on the sheep's back to keep them warm through the winter and by that means reduce the expense of winter feed and increase the value of the fleece when it was full grown.

Texas and California.

The only consolation a shipper can have when 80 pound sheep are sold at $1.75 per hundred pounds, and the freight charges are half the money, is that they are gone. It is poor consolation, but better than none. *Texas Wool Grower.*

That's the kind of consolation some of our flockmasters obtain.

Wool Industry in Russia.

Of all industries, wool manufacturing is, without doubt, the most developed in Russia. This is due to the enormous amount of wool which the Russian clip yields, and the severity of the climate. Russia has at all times possessed large flocks of sheep, but latterly much has been done to increase them, particularly Merinos. Fine wool sheep breeding is carried on to a notable extent in southern Russia; there the most improved methods of machine scouring exist, so that that part of the empire turns out wools much better cleaned than formerly. There are at present no fewer than forty such establishments in Russia, employing 7000 operatives, and turning out annually 13,000,000 roubles worth of wool. As for wool manufacturing, each factory turning out tissues, calrace sparity much all branches connected with it, but, nevertheless, the spanning of wool has gradually attained great importance in Russia as an independent branch, and has, moreover, fostered domestic wool working. Aside therefrom, a good many sheep breeding farmers spin their wool, and either sell the yarn or have it worked on the spot. The number of weaving establishments for pure as well as cotton-mixed woolens in Russia is very large; great progress has lately been made therein turning out light tissues for women's wear, and these goods compete direct in Eastern markets with English. Cloth manufacture is in a most prosperous condition in Russia. A most important portion thereof is military cloth on account of the great size of the army; the middle classes have worn, for a long time past, a stout, rather coarse cloth, and there is, besides, the export trade to China and Japan. Most factories make every species of cloth, and turn out the very finest from the raw wool they buy. Thus the Thornton Cloth Factory at St. Petersburg manufactures seventy-two different qualities of cloth after the latest English patterns, and has 800 looms in operation. Most of the wool manufacturing machinery is imported; only a limited number of machines hail from Bialystock, Grodno, and Poland. The most important machines come from England, nearly all the mechanical looms from Saxony, while pulling and all-velvet manufacturing machines are ordered from Aix-la-Chapelle and Verviers. Besides coal, wood is used as a fuel in Russian factories, for Russian coal is only cheap near the

mines. As for credit, Russian manufacturers usually take six months' acceptances, but always so arrange that they fall due before, and not after, the Nish-Novgorod fair. While this great fair is held, the Russian bankers negotiate all these acceptances with the utmost regularity. The discount is seldom less than seven per cent., small exceptances have often to submit to ten or twelve per cent. discount, it is not likely, however, that these exorbitant rates of interest will prevail much longer in Russia, for banks now multiply in all directions in the empire. While, on the one hand, the cost of manufacturing is greater in Russia than anywhere else, this is also the case with the steady current profit realized by the manufacturer, who clears between fifteen and twenty per cent. more profit than the manufacturer outside of Russia does. Then there is the protective duty, which is so high that, with a comparatively moderate import to contend with, the Russian woolen manufacturer is always sure to get rid of his goods. The following cloths are those of most current sale: Military cloth, summer tricots, winter tricots, summer paletots, and winter paletots. Some manufacturer have attempted making course cloths, but without any profitable result. The Moscow exhibition of last summer has shown what their manufacturers can accomplish, their exhibits being highly creditable. Hence, all that Russia imports is the very finest and newest, in which there is no Russian fashion, for the wearers of such fine goods dress like anybody in London, Paris, or Berlin, after the latest fashion there introduced. Even the lower classes in the cities have begun to wear cloth, giving preference to dark colors in blue and green, while the women fancy turkey red, and without this somewhere on their body they would not consider themselves well dressed. This the Moscow manufacturers never lose sight of, and get up the most extravagant Oriental mixture of colors for female wear.—*Journal of Fabrics.*

THE WOOL MARKET.

We have had a fair's active market this week for all kinds of Wool at prices within our quotations. The sales will foot up in the vicinity of 1,000,000 pounds of course the largest mostly was fall wool. The stock of spring of all kinds is now pretty well cleaned out.

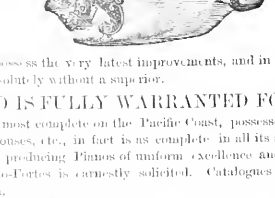
CALIFORNIA
Piano Manufacturing Co.

INCORPORATED UNDER THE LAWS OF CALIFORNIA, MARCH 8, 1882.

Manufacturers of Strictly First Class

UPRIGHT PIANOS.

Factory, 431 and 433 Fourth St., corner of Bryant. Cor. Kendall Carriage Fact'ry.



Salesroom, 30 New Montgomery St., under Palace Hotel.

Our instruments possess the very latest improvements, and in TONE, TOUCH and DURABILITY are absolutely without a superior.

EVERY PIANO IS FULLY WARRANTED FOR 5 YEARS.

Our factory is the most complete on the Pacific Coast, possesses every kind of machinery, steam, dry houses, etc., in fact is as complete in all its appointments as any Eastern establishment, producing Pianos of uniform excellence and durability. An examination of our Piano-Fortes is earnestly solicited. Catalogues and full description mailed on application.

WALTER S. PIERCE, Secretary and Agent.

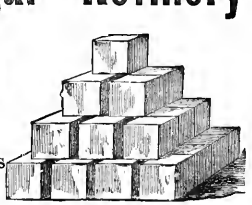
American Sugar Refinery

Manufacturers of the Celebrated

CUBE SUGAR

Supplies only Exporters and the Jobbing Trade.

This Company Manufactures all the Grades of HARD AND COFFEE SUGARS AND SYRUPS. Special attention Given to the Making and Packing of LOAF SUGAR FOR EXPORTATION.



C. ADOLPHE LOW & CO., Agents, 208 California Street.

PAT. OCT. 25, 1881

Reliance Machine Works.

JUSTICE BAKING POWDER.

"Fiat JUSTITIA, Ruat Cœlum."

SAN FRANCISCO, June 30th, 1883.

We beg to call your attention to our JUSTICE BAKING POWDER, each can of which we guarantee to be full net weight and to contain nothing but the purest Cream of Tartar and the best English Bi-carbonate of Soda, compounded on the most approved formula.

We make the price as low as it is possible to sell this quality of goods, desiring that the purchasers may feel they are getting value received, ALL IN BAKING POWDER, and that they are not involuntary contributors to extravagant newspaper advertising, or to the placarding of fences, as their intelligence must advise them is too often the case when they buy some other brands. At the same time, *Justice* to the manufacturer, *Justice* to the dealer, *Justice* to the consumer, and last, though not least, *Justice* to ourselves compels us to assert in unmistakable terms that, however *Majestic, Far-fetched*, or *Sweetly Perfumed* the title by which any other is known, no other, more wholesome, more effective, more economical Baking Powder ever was or can be produced, than that we now offer you. *Justice* should be found in every city and town throughout the length and breadth of the land, and we solicit your kind cooperation in our efforts to place it there, feeling confident that the closest investigation and the severest ordeal to which Baking Powders can be subjected will prove its intrinsic merit and fully bear out all we claim for it.

With this introduction we are content to place our *Justice* Baking Powder before the public, and referring you to the accompanying memorandum of prices and style of packages at foot,

We are, very respectfully yours,

TABER, HARKER & CO.

VOL. XI, NO. 8. SAN FRANCISCO, NOVEMBER 30, 1883. PRICE 10 CENTS

Charles Kahlo, American Consul.

The American Government has been fortunate in selecting, for the responsible positions of Consul at Melbourne and Auckland, two gentlemen who are so eminently well qualified to discharge the duties of their respective offices, and reflect credit upon our country. But the appointments to the colony of New South Wales have, for years past, been singularly unfortunate. Hezikaha Hall made three unsuccessful attempts to establish steam communication between Sydney and San Francisco, in all of which he not only failed to accomplish his object, but acted so discreditably, that he brought the name of Americans into disrepute. When acting as Consul at Sydney, he received money from a lady for transmission to San Francisco, and issued a bogus draft on a respectable firm which was repudiated. He obtained money from laborers and induced them to leave their country in the expectation of immediate employment on the railroads of California, he gave orders which were not recognized, and last though not least, he received money from travellers to Europe and issued tickets right through to London, which on their arrival in San Francisco, they, to their sorrow, found to be worthless. In order to reach the end of their journey, the passengers had to apply hands to pockets for the second time and pay railroad fare across the continent and by steamer to London, to the credit of the Colony of New South Wales, it must be conceded that on ascertaining this flagrant act of dishonesty, they undertook the responsibility of relieving the persons so swindled, and also those at Sydney who had paid their money but had not departed; ran their own Colonial steamers to San Francisco with others chartered for the purpose until all chance of future dishonesty was removed by giving the contract to the Pacific Mail Steamship Company. Now comes Charles Kahlo who received the appointment of Consul at Sydney, as a reward for his disinterested services at Indiana in the memorable Campaign of 1880. Were we to judge of his power and influence by newspaper puffs, we should readily grant that New South Wales had secured a desirable appointment as Consul at last, but knowing as we do, some incidents of what has already taken place during his short official career, we have come to the conclusion that the sooner he is relieved from his position, the better it will be for the interests of the Colonies, as, undoubtedly it will be to the dignity and credit of the United States. For two years Charles Kahlo has acted as Consul, a portion of that time, however, he spent upon American soil; possibly at Colonial expense, but certainly after representations that he had unlimited power at Washington, and could advance Colonial interests merely by presenting himself and stating his requirements. No one knew better than Kahlo himself, that he has no influence whatever in that direction, but possibly he might have forwarded some little scheme in furtherance of self-interest. One thing however, is certain, that no apparent good ever resulted to the Colonies by his interviews at Washington.

That the Consul induced the Government of New South Wales to join with New Zealand in a renewal of the mail contract to enable the claims of the Colonists to be brought before Congress in December is a bare-faced lie made out of whole cloth or that he influenced a majority of Congress to vote for a reduction of the wood duty is equally fallacious, with which may be classified all his other pretended influences.

It appears from recent reports that Consul Kahlo is again about to relinquish his post of duty at Sydney, and visit America, as he says in the interest of the Colonies, accompanied by 30 representative men to make a tour of the principal cities inspecting manufactures, etc. From such an indication good Lord deliver the Colonists—it is to be hoped that they will have sufficient foresight to see through this gigantic humbug. The Australians who can, and do travel are gentlemen who pay their own way honorably, and do not believe in accepting gratuitous shelter and lodging from persons whose vocation is to provide accommodation for travellers—no humbugging or mean tricks will meet with favor from them. We strongly recommend such gentlemen if they feel disposed to engage in philanthropic work to visit California unaccompanied by any impecunious American, and on their social introduction to the Chairman and members of the Board of Trade of this city they will receive such information, and introductions to other cities, and states, in the Union, as will prove advantageous and tend to advance the meritorious object they may have in view.

Jay Gould is a self made man. He raised himself by his own work and the industry of every one he could take advantage of.

San Francisco and Montana Trade.

Before the completion of the Northern Pacific and until that road was built, the Union Pacific road, by its narrow-gauge branch line from Utah to Montana, controlled the northern Utah, all of the Montana and part of the Idaho trade. It would not make anything like hard times with the Central Pacific on California goods going into those Territories, but now that the Northern Pacific gives a new route to them, the Union Pacific has made the Central Pacific its agent for the narrow-gauge road, and is especially advertising and calling attention, through the Central Pacific, in the San Francisco papers, to the advantages to California shippers of the route to Montana via the Central Pacific main line and the Union Pacific narrow-gauge branch. It may, indeed, be truthfully asserted that the trade of all of Montana and a part of Idaho and Utah has never until now been fairly open to San Francisco. Before the Northern Pacific was built, the Union Pacific controlled the trade of those Territories for the benefit of its own main line from Utah to Omaha. We have been always hearing that the Northern Pacific was going to injure this city greatly. In this case it certainly has not, for it offers every facility to California shippers to send freight on its steamships to Portland and over its road to Washington Territory, Idaho and Montana. It forced the Union Pacific to make its narrow-gauge branch from Utah to Montana practically a road running in the interest of California shippers. Heretofore shippers from California over the Central Pacific and Union Pacific narrow-gauge branch have been so outrageously overcharged on the latter road that the C. P. contemplated the construction of a road of its own from Ogden or Kelton, Utah, to Montana. Now, however, there is no need of such a branch and waste of money in building a road which would necessarily be nearly parallel to one already in existence.—*S. F. Real Estate Circular.*

Mexican Fruits.

"The important rank which the dried fruit production has taken among the resources of California," says *The Mexican Financier*, "shows what may be accomplished in Mexico by following the course suggested in the recent circular of the minister of public works concerning the development of the fruit export trade. A large export business in fresh fruits, particularly bananas and pineapples, has sprung up in Central America, New Orleans being its particular market, whence the fruit is distributed all over the central United States. Little or nothing is done in the same line on the gulf coast of Mexico, although the finest kind of fruit is raised there, and the ports of Vera Cruz, Tuxpam, and Tampico offer good opportunities for export, and are besides much nearer New Orleans, so that fruit could be brought to market in better condition. The Vera Cruz Railway might add considerably to its business by offering inducements for the growing of oranges and other fruits along its line for export, through affording low and expeditious means of transportation. It could easily afford to do this, since the fruit would be carried down grade at slight cost. The South Pacific Railway sets a good example in running special fruit cars on express trains between California and New York, and at rates lower than those prevailing between Vera Cruz and this city."

My son you may invent a new electric light, you may improve the telephone until it can be talked to, you may write a dozen successful books, you may save a sinking State, make your name famous, your home great and your memory blessed, and then you will not have as big a fame as Tom Thumb, who never did anything in his life, except to grow less in fifty years than most boys grow in ten. And he only did that because he could not help it.

Special Inducement.

As a Special Inducement to our Viticultural Friends, we propose to send a specimen number of the SAN FRANCISCO MERCHANT to any address in the world for the next twelve months, free of charge.

SAN FRANCISCO MERCHANT.

We think this a most liberal offer, and trust that the many friends of the MERCHANT will endeavor to secure new subscribers, and help us to increase our circulation.

THE WINE PRESS AND THE CELLAR.

For particulars see advertisement in another column.

The output of the wine California will produce in 1884, 5, 6 and 7 will come from two directions. We will have coarse wines such as Mission and dry Zinfandel, which we can sell so cheap that working men will buy them at not table wine instead of beer, and we will have noble wines of such rare quality that the wealthy will purchase them in preference to the best that importers from France or Germany can offer them.

The Cloverdale *Sun* fears that capital will not be forth coming to carry over from the cellar to the consumer the wine we are going to produce. An unnecessary alarm. show American capital where profits can be made, and especially in so safe an article of merchandise as good sound wine, and millions will be seeking investment.

J. B. J. Portal, the well known viticulturist of San Jose, writes in reference to Rixford's "Wine Press and Cellar" obtained from this office, "I find it full of valuable information to wine growers." Every vineyard owner or wine maker in the State who has not a copy of this work should send us $1.50 by postal note, or in one-cent stamps and we will mail him the book by return.

We must not overlook the probability that two years hence pure Mission naked in the makers cellar, may be selling for 15 cents a gallon and valley and Lodi right Zinfandel at 20 cents. But in those days fine wines from choice foreign grapes will sell, naked, from the maker's cellar at from 40 to 60 cents a gallon and perhaps for special varieties, made with unusual care, at one dollar.

THE FUTURE WINE MARKET.

For the benefit of those people who fear that at some future time — say 1885 or '86, we may have a good crop of grapes and more wine than a market can be found for in the United States, we copy out the revenue report for the fiscal year ending June 30th. Taxes were paid on 75,000,000 gallons of spirits of which 50,000,000 probably went into consumption in the United States as whiskey.

Cannot a people who drink at least a gallon of spirits a year reduce their whiskey bill a little and drink a gallon of wine a year? Of course they can, if we give them good wine and cheap wine, and they will be benefitted by the change. Then again, last year taxes were paid by the brewers on 500,000,000 gallons of beer. If American men and women and children now drink nine gallons of beer every year, cannot they content themselves with eight in future and drink a gallon of wine instead? If they do, we shall have no difficulty in disposing of a 60,000,000 gallons wine crop. If California wine is to trench on the consumption of beer we must furnish sound wholesome and palatable wine in western cities at 30 cents a gallon wholesale. It now costs laid down in St. Louis about 52 cents. When a family in any of the great centers of population can buy a sound Mission or valley Zinfandel at ten cents a bottle, the bottles to be returned, we will sell millions of gallons of such wines yearly in more than one State. This would mean fifteen cents a gallon, at the most, at the makers' cellars, and a general reduction in freights, dealers' per centages, cooperage and other expenses. All these reductions, however, are practicable in the future, it we only have the quantities to handle. Mission and other heavy-bearing grapes, grown by irrigation, will pay growers well, if they net $10 a ton on the vines. When some California wine is sold in the Atlantic States at ten cents a bottle, there will be some other California wine retailed at $2 a bottle. The consumption of wine in the United States, even without any change in the habits of the present adult population, must increase every year; and we should not forget that the United States is now importing from Europe still wines, equalling in quantity the whole present production of California; and, moreover, that at least one-eighth of the wine made in California this year promises, it allowed age to mature, to excel in quality nine-tenths of the imported wine. There may be a squeeze, more or less sharp, or rather it may be felt as such, when the production of common wines, alone, first touches 20,000,000 gallons, but we shall then see men planting more vineyards for producing just such wines, and on the expectation of making a profit, even should prices go lower than they touch on the first break. When we are making 20,000,000 gallons of high-class wines and 40,000,000 gallons of common wines, and makers are selling such wines at from 15 cents to $1 a gallon, we shall look back with a smile at our fears in 1883 of the business being overdone.

The New York *Tribune* and some other Atlantic papers have expressed the idea that the short wine crop in this State was due to phylloxera. This is an error which should be corrected. The falling off in yield was due to hot northers which scorched the bloom and young fruit. The phylloxera pest is a disease that attacks only some of our vineyards, and in a much, mild form than in Europe, and is fast rapidly well controlled. The proof that it was not phylloxera, if proof were necessary of what we all know, is that the Los Angeles crop is also short, and there is not in that county a single vine known to be infected. Some fruits, and the wheat crop, suffered equally with grapes and from the same cause.

As many of our vineyard owners intend staking some of their vines, especially such as are hard to fit by long jamming, we call attention to L. H. Wakefield's advertisement of grape stakes. The same gentleman has for sale 20,000 superior cuttings of Black Burgundy. These cuttings are not to be had in any great plenty in this State, and engagements should be made early.

Circulars Sent free of Charge on Demand Application.

The Cloverdale *Sentinel* is not quite satisfied with our criticism of its articles in which it announced its fear of an overproduction of wine in California. It hopes that we are right while fearing that we are all wrong. In answer we would suggest that supply creates the demand nearly as often as demand creates the supply. In this instance we shall have both cases working for us. Too by we have a demand for superior aged California wines which we cannot supply. Inside future years, sodreaded by the *Sentinel*, we shall have a supply which will make it unnecessary to go to France for wines that have not only apparently, but in fact, age and all other valued qualities. The *Sentinel's* alarm for the future reminds us of an article which we read in the *California Farmer*, by Colonel Warren, the old st agricultural editor in this State, in the early spring of 1863, warning farmers not to raise more wheat than could be consumed in the State. At that day it looked to him that wheat was being overdone, as it now looks to the *Sentinel* that wine is likely to be overdone. And the *Sentinel* ten years hence will be as unwilling to refer to that opinion as Colonel Warren is to-day to refer to his article on the overproduction of wheat.

CALIFORNIA WINES IN THE EAST.

Our worthy friend, the editor of the *Wine and Fruit Grower*, (New York), under the heading of "Long Range Views on Wines," replies to an article which appeared in the MERCHANT of October 15th, and as the subject under discussion is full of interest to the grape growers and wine makers of California, we do not begrudge it the space Mr. Clayton's answer occupies.

Our esteemed contemporary, the San Francisco MERCHANT, gives its powerful indorsement to the statements that have appeared in this journal of late, on falsified and bogus wines and brandies, and at the same time propounds some questions, which we will endeavor to answer.

First, we thank the MERCHANT for its appreciative recognition of our efforts and the courteous tone and spirit in which it has brought this matter forward—it is the true spirit in which to seek for truth and light on this interesting, though oftimes perplexing subject. The ultimate success on a mammoth scale of American viniculture we heartily believe, but it has to be fought for. The position we occupy enables us to see, perhaps, more clearly than those on the "smoky verge of battle" the difficulties that environ it, and we are forced to confess that we sometimes fear that many of the murky mistakenly, if not actually insurmountable.

The letter referred to as written by the editor of this journal was a private letter written to Mr. Arpad Haraszthy, and which not intended for publication, was not in any sense confidential, and there is no reason why it should not be public property, as it discusses a matter of great public interest, and we will add that we shall take nothing back.

Referring to the statement in the letter that "California hams, viz., their representatives here (in New York) are selling crooked wines, split in two," and not only that, but "past mizzled," etc., etc., the MERCHANT thinks we were in error. Well, we wish we were, but *know that we were not.* We know where to find straight California wines, made from grape juice, and finished and handled in the best manner; and we know, too, that these wines are sold mostly under foreign labels as imported wines, with which they compare more than favorably. We know, also, where to find "crooked" California wines, and we distinctly declare that not less than one prominent California house is selling such wines in this market, not to mention the crowd of outsiders and small fry. By doing so it can undoubtedly damage its straight goods; that is where the "insanity" comes in. These "insane" chaps intend to make, and are making their fortune in the generation. "After us the flood," they say. They should be sat down upon, squelched, in the interest of American viniculture.

Second—In order to the "Concord and Virginia wines being put on the market here and handled better than the California wines," the MERCHANT asks, "Are we sure that these wines are the pure product of the grape?" Are they not colored? Is not some sugar or grape sweetening beadded to them?" etc., and also "why do the splitters not use the Ohio and Virginia wines also," etc. One question at a time. We answer 1st. As both of these pure juice, we do not suppose all these wines are pure wines by any means. But the bulk of the dry wines of this class are pure juice, particularly the reds, with no additions except cane sugar or grape sugar, and having added to them," etc., and also "why do the splitters not use the Ohio and Virginia wines also," etc. One question at a time. We answer 1st. As both of these pure juice, we do not suppose all the wines are pure wines by any means. But the bulk of the dry wines of this class are pure juice, particularly the reds, with no additions except cane sugar or grape sugar. As to color, the grapes used for red wine are mostly Norton, Cynthiana, Clarence, Opetio, Ives and Clinton; all these grapes have abundance of color, and the first four have three to four volumes (so to speak) of color, and more than double that of many other grapes in general cultivation, either here or in California, the year bought up in this market early largely for their intrinsic color, and are used to tone up and color low grade sof foreign and California wines. The reds so noted for color them, nature has already done that with a bountiful and a master hand, and our California friends would do well to note down this fact.

The wines that will best be sure those that may be most easily sold for import duty, and those that are natural in color and to best advantage in character, whereby they may become useful in the "splitting" and "stretching" process, and "doctoring," as it is diplomatically called by the spirit trade.

Again, these high-colored strong wines are bought up by those who handle straight goods and sold on their merits, and in such case they fetch from $1.00 to $1.50 per gallon, wholesale, and the consumer will pay $9 to $12 per case for these before he will pay $6 for the best California. This is a fact, which we see confirmed every day, and we have no interest in making it appear otherwise than as it actually is. The first four grapes mentioned make a fine wine, either as purely or blended, and will bear comparison with the best Zinfandel while much deeper in color and somewhat heavier in body. Refined cane sugar and grape sugar are used daily by the East in wine-making in making sweet wines and in some grades of red wines where the saccharine is deficient, and when it comes to "galvanizing" and "pasteurizing" we regret to say that some of them "are no slouch of" at that either.

A few years ago the great bulk of red wine used in the East in States was made from the old Concord grape, a grape not fit by itself for wine and except for a spot to old age, we would employ a strong term—but a change has been gradually brought about since the success of the Norton wine at the Vienna and Paris exposition, and the red wines of the so State are made chiefly from that grape. It will not be long before this will be generally recognized as the type of American red wine, and all qualities considered, we think it will not be bowed into the background by any other red wines no matter where or whence the origin.

Respecting the assortment of the MERCHANT that "two hundred thousand gallons more of California wines were shipped to New York this year than last year," we have only to say that the MERCHANT is mistaken. Up to the present time (November 15th) the total receipts at New York for the first two months of 1883 have been within a fraction of 995,000 gallons, as compared with 1,037,000 gallons for same period in 1882, and 1,166,000 gallons for the first two months of 1881. This shows a falling off of over 100,000 gallons as compared with 1882, and 175,000 gallons as compared with 1881, or an average annual decline of about 86,000 gallons.

Lastly: the near California can approach to the foreign wines in their products, the less California's, *as such*, will be sold in this market. "That is where the hen scratches."

The value of advertising was recently strikingly illustrated. A farmer who wanted help advertised in a local paper for two boys. When he returned home his wife presented him with two mule twins.

MAKE YOUR VINEYARDS PERMANENT

RESISTANT VINES THE ONLY SAFETY

I OFFER FOR SALE THE FOLLOWING varieties of Vines and cuttings, all grown in this state, free and healthy

Riparia, Elvira, Taylor, Clinton, Missouri Riesling and Thland, Lenoir, Herbemont, Cynthiana, Norton's Virginia.

Also, rooted vines of the following Vinifera varieties

Zinfandel, Queen Victoria, Chasselas, Rose, Black Burgundy, and others

Price list and circulars sent on application. Address

GEORGE HUSMANN,

Talcoa Vineyards, Napa, Cal.

GRAPE CUTTINGS

THE BARTON VINEYARD

OFFERS FOR SALE AT LOWEST market rates, 5000,000 choice foreign varieties grape cuttings, in lots to suit, such as

Zinfandel, Charbono, Riesling, Berger, Blanc Ebn, Malvoisie, Muscatella Blanco and many other varieties.

Which will be guaranteed healthy, and in first class condition. Address

BARTON VINEYARD,

Tres to, Cal

GRAPEVINE

CUTTINGS AND ROOTINGS.

THE FINEST FOREIGN VARIETIES FOR WINES, table use, brandy making and raisins from the celebrated Kearny Vineyard and Nursery, Santa Clara Co. MATARO, GRENACHE, GROS VERDOT, CHASSELAS, MUSCAT, CHARBONO and others, warranted true to name and are passed through a disinfectant or washbefore leaving the place. Fine varieties being scarce and in great demand this season, it is advisable to order early. Apply or address P. O. BURNS, proprietor, box 1495, San Jose, Cal.

DISTILLING TO WINE PRODUCERS

A GENTLEMAN WELL KNOWN IN THIS STATE for his experience and success in a branch distilling first class engagement for the season. Parties willing to leave terms to be arranged after the business proof of his capacity.

Learned his business at the distillery of Otard Dupuy & Co., Cognac

Address B. C. P., at this office.

"THE WINE PRESS AND THE CELLAR."

A MANUAL FOR THE WINE MAKER AND THE CELLAR MAN

A Few Press Notices.

(S. F. CHRONICLE.)

"The Wine Press and the Cellar, by E. H. Rixford, is a practical manual which contains hints and suggestions of value to the most practical wine maker, while it gives ample instructions to the amateur vineyardist. It is the work of a man who has had experience in growing grapes and making wine in this State, and it therefore has not the look of a book written from books. That it is written for a moderate sized, and natural conditions of variance with those of California. The author has loved upon the delicate art of wine-making, for his materials, finding the most valuable suggestions in the French authors, but he claims to have presented here, for the first time in English, a complete guide to wine-making. The book is divided into sections, the title indicated by a heavy-faced type, while a complete index still further assists the searcher after the facts. The book is well gotten up and ought to have a wide circulation in the country.

Glenwood.

Mr. Henry Mel of Glenwood writes to the MERCHANT under date of Nov. 21st:

I have received no intimation with your letter of the 15th inst. with your check for $100 subscription to the Viticultural Convention. I must confess that I am disappointed with the attendance at the Congress will be over. I have written to every particular party in town to follow it up, so there must be some reason for the absence of people from Glenwood.

You may be interested in knowing what is being done in this community. We Hadley.

The vintage is practically over. All grapes shipped earlier than the second week in September ripened well and sold for table use.

The wine crop will about equal that of last years in quantity and the quality is, I think, the best as a product of the Sonoma mountains, for which season having been most favorable.

Our wine crop would have been larger had not so many grapes been sold for table use.

Our mountain fruit is obtaining the attention which it deserves. We have had purchasers from all parts of the state and much of our crop has been sold for shipment East.

Even our Mission grape sare sought for at a premium above prices as table grapes.

Have you heard of any sales of new wines yet?

Yours very truly,
Henry Mel.

[In answer to the above question, we may say that last week we reported sales by Mr. Barton, Mr. Laurent and others, making over 600,000 gallons in all. Ed. Merchant.]

Vines in Kern.

The Kern County *Gazette* is urging the planting of a large vineyard in that county, in connection with a winery, and claims that the few foreign grapes planted in small vineyards by Kern county farmers have done as well as those in Los Angeles. The Kern County *Gazette* says:

Occasionally a few farmers get together around about us and discuss the question of new uses of the lands of the valley. What excites surprise is that no vineyards on a large scale are planted. Years ago it was said if some one would make a test of the foreign grape, now that the Mission grape had proved so good a crop, it might result in placing the Kern river valley on an equality with Los Angeles in this product. The test has been made by a number of persons and has proved that every variety of foreign grape suitable for raisins and wine can be produced here as profitably as any where. It has been shown that were every county in the state to enter extensively into this branch of farming it would be impossible to meet with the demand of the growing market.

Small vineyards here have not had much attention, from the fact that no one was interested to such an extent as to become purchasers of the small crops. If one large vineyard should be planted for the purpose of wine-making it would tempt a general dividing of the existing farms for vine bearing. So much less water is needed for this purpose than for anything else, even alfalfa, that there is no limit to the spread of this industry here when once started on a scale large enough to attract attention.

Recent Correspondence from Algiers.

We quote from the Paris paper *Moniteur Vinicole* and relate of depth 1200. It is to say a few words about the good wines found in Algeria during opposition. Notwithstanding the fault found with many of the wines and the errors committed in their manufacture, we persist in declaring to our friends, that shortly they will find not exactly wines of as delicate a class as the Spanish wines have, nor like the grand crus of 1st class, but certainly equal to all the 2nd class wines of the south rn, south-east and south-west regions of France. The most complain between Mostaganem and Oran, slightly rising in some parts, in others sandy, with rocks for subsoil, or in others composed of silico-calcareous gravel over turf containing 10 p. c. of oxide of iron, produces according to soil of the same vine varieties different, but is very favorable to grape growing.

Likewise the quality of the produce is different. In some districts the Scabrous Grossa grows that limit the vine even up to the month of May. Several planters in the same vineyard parts had to leave off planting vines. But these spots, fortunately, are very limited, and the bulk of the territory comprises soil for them. We saw wines, brisk, full of nerve, fresh, weighing 10 per cent, which reminded us of the fine Maconnais of Vauveil, and others of certain Macon growths. Evidently, Aramon is the predominant grape, but singularly changing in the Departments where it was planted. There would wine of more body, of deeper color, weighing 11 per cent, proceeding from the Mourvedre grape, others of the Grenache.

These wines, which are not plastered, represent the middling qualities of the ancient wines of the Coste Grand of the Cotes du Rhone; we should boldly compare them to those of Oran & Roquemanne of ordinary years.

It we add that people have largely planted near the water basins, near to agreement soil, having alkali in it and produce, therefore, a thin wine, we have shown that all vari ties, the most inferior not excepted, are found within circumference of some 40 kilometres. Exceptionally, we found a wine of great merit, to be placed in line with those of Crozes, Comas and St. Joseph. Such wine was of the varieties named—probably no press wine was added to them, and they had fermented in closed vessels. The quality had to thank the rocks the vines grow on.

The wines are all clear and well fermented. Prices range between 24 and 30 francs per hectolitre.

The large domains of Andalusian proprietors sold the crops at from 25 to 30 francs. Their wines are well made and of quality. G. N.

CALIFORNIA WINES IN ENGLAND.

EDITOR SAN FRANCISCO MERCHANT:

Last February when I shipped samples of California wines to England, you requested me to let you know the result and how they were received.

The wines sent were Gutedel and Zinfandel, 1880. Fifty gallons of each going home to care of Messrs. Findlater & Co., of Dublin, and the same quantity for the 34th Regiment—now in India—was consigned to the well-known firm of Messrs. Christopher & Co., Pall Mall, London.

It may be well to state that the wines were much lighter—being made for home use—than is generally the case. The Zinfandel being lighter in color and body and having less of the pronounced Zinfandel flavor than is generally demanded by the trade here, in fact approximated somewhat to a claret, and was the same wine that was so well thought of at the recent viticultural convention.

On arriving in Dublin about the end of last June, I found that the wines in charge of Messrs. Findlater had not been filled up, though opened and samples taken, nor had anything been done to them since they left here on February 1st; yet they were still sound and good, though not in such order, as can be imagined, as one would like to take samples from to exhibit as California product, but withal, when they were compared with Hungarian, Spanish and Italian reds, and Hungarian and Australian white wines, the result was not unfavorable to us, our wines still needing fining and lacking the age of the others.

The wine sent to London had been fined, bottled and shipped to India and appears to have been well thought of by the gentlemen who handled it. Some samples that were returned were shown to some wine merchants and private individuals who were good wine judges. No unfavorable opinion was expressed, but the contrary.

As far as could be gathered, California wine is as little known in England and the general impression seemed to be that all our wines were strong and loud; this probably arose from the fact that in the past Missions may have entered into the wines shown in London, or that too few know that of the Zinfandel is second to be a drawback, the English palate not being accustomed to it.

Two days ago a letter arrived from Mr. P. H. Drummond, of Dublin, who from the capital received from several prolong visits to this State is a firm believer in the ultimate success of our wine. He writes: "The California wines were received little over a week ago from Messrs. Findlater, so, armed with samples I visited five wine merchants, wholesale and retail, showing them the Gutedel and Zinfandel. All agree that the red wine was most excellent and that they could not recommend any change as regards flavor or color, and Mr. Smyth, of Smyth his Green, said that they could place 1000 hogsheads of a similar wine on the market if they could obtain it.

"Messrs Bewley & Co., large retailers, said that such wine would readily sell in London if it could be bought for or at anything like similar terms with French clarets, and that they deemed it superior to any of the other wines of a so-called claret type that are now being offered on the market, and in contrast with Australian wines they consid red the California, both red and white, superior both as to flavor and finish. One and all expressed surprise at tasting such clean flavored, sound, well handled wines some never having as much as heard of California as a wine producing country.

"Indeed, in the case of Messrs. Bewley, I had considerable difficulty in even inducing them to taste the wines, so convinced were they that they must necessarily be utter rubbish.

"The White all pronounced well finished, clean tasting and very sound, but not full enough for the present market. In one case, Mr. Thompson, of Messrs. W. D. Thompson, (wholesale only,) added to the sample glass a few drops of flavoring made up thus: One part of old brandy, two parts old sherry, and one part refined sugar, and pronounced that the wine that result d was the wine required by the market." [This extra body and flavor could easily be given by extra ripeness and age.—J. H. D.]

"But to sum up, the verdict of all was highly creditable, clean, sound wines, with true vinous flavor and bouquet, and contrasting more than favorably with the vintages of all other countries except perhaps Germany for White, and France, and even in these there need be no fear of unfavorable comparison. Of course, in comparison reference was not made to aged, highly finished, expensive clarets and hocks, but to good class wines of corresponding age."

"And to prove that all this was not merely talk, a partner of Messrs. Smyth offered to take, then and there, a few pipes of the Zinfandel at French claret prices, but I declined the offer, knowing that you were not in this business.

"The only fault found was that of want of fullness in the Gutedel, but we can easily remedy that by letting the grapes hang longer.

"I may add that in every case I asked to have the faults plainly and candidly pointed out, as my sole object in showing the wines was to obtain the true, critical opinion of experts.

"It is very gratifying to hear the wines so well spoken of, especially as none of those who saw them were predisposed in their favor; rather the reverse."

With regard to the wines sent to India, about a week ago, a letter was received from Major Malcolm, late pr sent commanding the 34th Regt., dated Agra, 27th Sept., 1883, in which was written:

"Now, I must tell you about your wines. They were greatly appreciated, esp cially the White, which I think is the choicest and best white wine I have tasted for a long time. It seems to be exactly the wine for this country (India). Any one in Calcutta would probably sell a lot of it." [He was given the address of a well known firm of Calcutta merchants.]

"Both wines arrived in splendid order their condition being perfect, but the White is the favorite, the Red having a peculiar flavor, the White also keeps best when left open."

When the wine was sent to India a candid opinion was asked, and presumably has been given.

It is evidently Major Malcolm's opinion that the wines are good, and would take in India, the United Kingdom. Here we see consumers prefer the white, and thus was the verdict of some old Indians and judges of wine, to whom they were shown in London; the merchants, however, apparently prefer the red. The opinion of officers of Her Majesty's army is worth having, for generally speaking, as a rule, extremely particular about their wines, and in my time the 34th was especially so.

It is certainly gratifying to find Californian wines so well received and so honestly commended, but it is to be feared that we must not expect English buyers on our markets for a long time to come, certainly not until the present system of selling cellars is altered, for they would only buy what they wanted, and would never dream of taking a mixed cellar in order to secure a desirable variety.

For small quantities of wine the freights to England are enormous, amounting, in the case referred to, to 3½d. per gallon; therefore, the result of a long sea voyage, it was shipped via Panama, but the fact that the wine is sent to Dublin were fully five months without being filled up, and the alcoholic strength being only the Zinfandel 10.5, the Gutedel 10.00, and yet were sound and good, though opened and samples removed, proves that our light wines will carry well and need not be fortified, and the shipment also proves that even those who were ready to condemn our wines admit their merit and their favorable comparison with European vintages.

To show that the Dublin wine merchants were, if anything, prejudiced against our wines, I may mention that some years ago a Mr. McKenzie, a gentleman well known in Dublin commercial circles, invested a considerable amount in California wines (in case, I believe), but hardly a bottle arrived in a drinkable condition, all being thick and sour—almost vinegar. It will be easily seen that a few such shipments will soon destroy our reputation in Great Britain.

With apologies for so intruding on your space, I remain, yours faithfully,

J. H. DRUMMOND.

Glen Ellen, Sonoma Co., 26th Nov., 1883.

GERMAN CORRESPONDENCE.

A viticultural subscriber hands us the following, from a private letter from a wine friend in Germany:

WIESBADEN, October 25, 1883.

W——: How did your harvest turn out and how does your vineyard get along? Many thanks for the San Francisco MERCHANT reporting on your Viticultural Convention. I have studied it carefully and have come to the conclusion that you have much to learn yet. No white grapes are fermented here in their skins, but on the contrary are at once put under the presses and the must fermented; red grapes are ferment d before they are pressed, on account of the color. For coloring red wine, little of blackberry or cherry juice is used now-a-days; but they mix their red wine with the dark, almost black, French wine from Cette and oth r places in southern France. By the cents from newspapers, which I send you enclosed, you will see that this has been a very good year in Germany, and the prices for grapes are high, much higher than in California—almost three times as high as with you. The average price for grapes on the left bank of the Rhine has been 20 pfennings (4.36 cents) per pound.* It is very difficult to abolish the niche measure. In villages below Mainz, such as Ingelheim, Bingen, etc., the grapes or must is bought at so much per niche, equal to 108 pounds of grapes. In villages above Mainz, such as Bodenheim, Laubenheim, Nierstein, etc., one niche is equal to 144 pounds of grapes. The greater part of the Laubenheim grapes have been bought up by one man at twenty pfennige a pound, equal to $87 per American ton. Prices at Bingen were from 19 to 34 marks, equal to $83 to $148 per ton.

In Rudesheim, Johannisberg, Rauenthal, etc., they have not yet commenced to gather the grapes, as they leave their Riesling on the vines as long as possible—no prices made yet, but they will be very high.

It is acknowledged that this is a very good year, though not like 1862, '65 and '68, it comes nearer 1874. The quantity is a little above an average year (mitteljahr), nowhere a full harvest. The vine dealers complain about high prices. [German wine dealers, like our own, want a large slice of the turkey.—ED. MERCHANT.]

What I don't like in the report which you sent me, is the speech of Mr. Jacoby and other wholesale wine dealers, or rather the threat of a crash in the prices of grapes and wine, should the growers continue to maintain their high rates. Well, I hope that it is not, or will not, be so bad. I am of the opinion that, should the next and following years be bad ones in Europe, and the prices of wine continue to advance, as it is likely to be, California will be able to export to France and Germany in spite of high freight and duty; that is, wine from the Zinfandel grape to France and Riesling and Berger (called here Klemberger) to Germany. Not so much to sell for what these California wines are, but to blend them with German and French wines. I don't recollect having told you about the auction of California wines, some two years ago, in Mainz, being part of that cargo shipped by Otto Esche in the vessel Stella. The red wines were spoilt and, I suppose, were not made from Zinfandel but from Mission grapes; on the contrary, the sweet wines were pronounced by everyone far superior to Hungarian wines.

The phylloxera has commenced its ravages in the Ahr district, but happily yet on a small scale, and is vigorously fought against. E. F.

* 100 pounds German, equal to 110 pounds American; 90 cents equal to 4 marks or 100 pfennige, or say, 4 pfennige equal to one cent.

Col. Geo. F. Hooper, of Sonoma, informs us that a neighbor of his, Thos. Hanna Cheney, who has a small vineyard on the mountain behind his place, gathered from his vin yard of Zinfandel, consisting of about four acres, a first crop of 42 tons and a second crop of four tons, making 46 tons. This vineyard yield d about 31 tons last year. A two-year-old addition to the vineyard of Zinfandel, consisting of four acres, yielded about four tons. Many other mountain vineyards in Sonoma astonished their owners by the heavy yield of magnificent grapes. Col. Hooper, however, confirms the report published in the MERCHANT that the yield of Sonoma Valley is one-fifth less than last year. Col. Hooper informs us that he is clearing ground on the mountain side and intends planting vines that are benefitted by long pruning and will trellis or stake them. The varieties he proposes to plant in this new vineyard are Franken Riesling, Chasselas, etc., for white wines.

Vitis Californica.

We learn from the St. Helena *Times* that Mr. Mattier of Harbin Springs is making a considerable quantity of wine this season from wild grapes of the Californica species. He expects to improve considerably upon the quality of the article he made three years ago. That this has been a very strong indorsement, having been submitted through Mr. W. Moore to Mr. F. Poltndorff, who, under date of December 18, 1880, pronounced the following opinion: "Color, deep rich ruby, superior to that of any cultivated vine in the Satte. Taste, vinous, fruity, in counter-distinction to a berry taste; no disharmony of extractive or unconverted saccharine and, save a pronounced predominance of harsh, tannic taste, not dissimular to that of very ordinary cultivated grape wine." He also said of another sample of wine from the same source, which was raised from the bunches of one single vine: "It yields the astonishing proportion of 11.45 per cent of alcohol, free from acids, more than 9 per mille, and a large amount of salts and alkalies in the 35 per cent of the liquid less of the mass. Taste, absolutely dry; thus sugar seems all converted, but a great quantity of carbonic acid gas is remaining * * * The fact of this liquid being from one vine full of bunches, and withal having the amount of saccharine to develop the proportion of almost 11½ per cent of alcohol, speaks volumes for the extreme usefulness of this kind of vine. Even if used in hedges the abundance of bunches it seems capable of producing would constitute a source of income, applying its juice for distilling, as without cultivation it yields as much alcohol as cultivated vines. But as it can and ought to be used for wine purposes, its extraordinary deep color will still more recommend it. Add the resistance the wild grape shows, against phylloxera attacks, and surely the qualities of the vine will be recognized by the progressive planter."

THE WINE MARKET.

The crop of 1883 as to quantity yet be described as most, as this wine, except that of Fresno and other early districts, the yield of which has thoroughly settled and is ready for shipment. Of sales we have in charge the report be yond what we said last week. The new wine coming from Sonoma valley, it is said was made on account of San Francisco dealers and is being shipped to its owners to be filed under their own supervision

We cannot understand why wine makers are so reluctant or so apathetic in reporting sales of cellars. It is their interest to report to us. If the sale is at a good price, it helps other makers who have not sold, and in another their turn may come and they may want to know what cellars in other counties have sold for. While they follow the present policy they are playing into the hands of the dealers, and the dealers cannot be blamed if they take advantage of makers' want of knowledge of business. If the prices low, still report it with the explanation why the price is low. A correct report of all sales in the State would make the MERCHANT worth from a hundred to a thousand dollars a year to a wine maker, but we cannot report sales if wine makers conceal them. We cannot expect dealers to tell us that they bought one man's wine at 50 cents, when they are trying to buy of his neighbor wine to mix largely at 25 cts. Have we said enough.

We hear of a sale of Napa wine of 1882, not of the best quality, of 20,000 gallons made this week, but cannot learn the price paid. Overnight not a sale. Prices are said to be nominally as follows, but as public reports of what is transpires all their wheat. Farmers locally express no more learned this an are generally always to report, though it has often occurred that buyers have wished them not.

The demand for Brandy continues dull, particularly for "Bottled" packages.

For Exports and Imports, see Merchandise Market.

Brandy Original Government Storage in Bond made from Wine:

2 yrs.	$81	95@$1 10	$82	85@ 95 cts.
3 yrs.	$1	05@1 15	$1	20@1 30

Meat Market.

Beef is firm at quotations, with a moderate supply. Mutton is higher. Hogs are arriving freely, and are taken by the packers and for the local fresh pork trade as fast as they are offered. Following are rates for whole carcasses from slaughterers to dealers:

BEEF—First quality, 6@6½c, second quality, 6@6½c to 7½c; third quality, 5½@6c ₱ lb.

VEAL—Large Calves, 6@7c; small ones, 8@9c ₱ lb.

MUTTON—Wethers are quotable at 6c and Ewes at 5½@——c ₱ lb, according to quality.

LAMB—Spring is quotable at 7c ₱ lb.

PORK—Live Hogs, 5¾@5¾c for thard grain hogs on foot; dressed, do, 7¾@7¾c.

PRODUCE MARKET.

The Imports and Exports given below are up to Wednesday evening.

FLOUR:

During the week, owing to the advance in the prices paid for Wheat, figures for Flour have been raised fully 12½c per bbl, and it is quite probable that a further enhancement in value will be recorded before the close of the current week.

Receipts of week, 71,430 qr sks

Extra, $6 75@6 00, Superfine, $4 00@4 75, Country ditto, $3 65@4 50, Intrpro Extra $5 00@ 5 50 per bbl for jobbing parcels to local consumers, but round lots for export can be obtained for some what less figures

WHEAT:

Receipts for the week, 244,100 ctls.

Shipments and New York quotations are at an advance, but in Europe no change in figures has been noted. Here there has been a gradual advance in prices and top figures do not seem to have been reached yet. The increase in values in the local market is due to the fact that freights are unprecedentedly low, receipts light and speculation on call active

Sales of No. 1 White at the Produce Exchange Call Board, yesterday, included, in 100 ton lots: 100, $2 01½; 100, $2 01¾; buyer the season, 100, $1 97½; seller the season, 100, $1 91@1 91½; buyer 1883.

In the sample market $1 92½ is the asking price for No. 1 White, but shippers refuse to pay more than $1 87½@1 90 for choice milling, $2 per ctl is asked, and millers cannot obtain desirable parcels for less

BARLEY—

In the sample market No. 1 Feed sells for $1 03¼@1 05, Brewing, $1 10@1 15 for choice. Chevalier, $1 12½@1 20. For darks, coast to choice Bay, Sales of No. 1 Feed on Call yesterday included 1000 bnls, $1 14¼, buyer the season, 1000, $1 03¾, $1 04¼, buyer 1883.

Receipts of week, 23113 ctls

OATS

Receipts of week, 5037 ctls.

We note the arrival of a car load from Grand Island, Nebraska, the first received from that direction in months. Stocks in the city are liberal, but the same are in strong hands, and no decline in prices is anticipated in the near future. Black, $1 45@1 50, White, $1 50@1 85 ₱ ctl for fair feed to extra choice milling.

CORN—

Receipts, 4985 sks.

With more liberal receipts from the southern coast, prices are lower, and consumers take only sufficient to meet immediate requirements

Cali rom yellow is quotable at $1 45@1 47½; do white, $1 50;; mixed Nebraska, at $1 50 ₱ ctl for good.

BUCKWHEAT

Receipts of the week, 25 sks

Market nominally quotable at $3 50 ₱ ctl for good. Arrivals exceedingly light, and prices have advanced.

RYE

Receipts of the week, 800 ctls

Quotations are more or less nominal at $1 10@1 20 per ctl. The market is exceedingly dull

MILLSTUFFS—

Receipts of the week, 18,861 sks Bran, 1300 sks Middlings, 350 ctls Ground Barley, 138 ctls Ground Feed

We quote Ground Barley, $21@25 per ton Middlings are selling at $2 lore 2 00 per ton, White Bran, $17 50@18 per ton, Oil Cake Meal, $30, Feed Corn Meal, $35@36, Cracked Corn, $36 per ton

HAY

Receipts of the week, 1179 tons.

We quote Alfalfa, $7@10, Wheat, $13@ $15, Stable, $12@14 00, Wild Oat, $13@$15, Oat, $9@11, Barley, $10@12 50 per ton.

STRAW

Receipts of week, 145 tons.

Quotable at 50@65c ₱ bale, as to condition.

SEEDS

Receipts of week, 131 sks mustard, 43 sks flax, 375 sks alfalfa

Flax quotable at $2 50@2 75 ₱ ctl; Canary, 5@ 5½c ₱ lb; Alfalfa, 9@10c ₱ lb; Timothy, 7½@8c ₱ lb; Rape, 3½@3½c ₱ lb; Hemp, 3½@3½c ₱ lb; imported; Mustard, choice Brown $3 00@3 25 ₱ ctl; White, $2 75@3 00, Hemp, 3c, Sage, 30@35c

BEANS

Receipts of the week, 21308 bags

Heavy arrivals continue, which makes holders anxious, as there is no Eastern demand yet and our home trade is very dull.

We are in the trade and had a solid bank account, we would say this year that is upon it.

At present, for taking it at the worst, there is no reason for any blues. We never saw the power that our main had over this market so vividly put forward as it has been in recent events—for we supposed that the new comers in this line would have nerve enough to combine and not be thrown judgment to the bats it up after they had got so far along as to buy the bulk of the crop of the State, and it grieves us to have the bank hopes that we expressed some weeks ago so quickly blasted.

The principal trouble is with Whites, which are "off," not badly, however, but enough to show that the Bulls are lack nerve. Had these qualities that a solid Bank should have—it is the old story of going in like a lion and coming out like a lamb

Go and continue firm, and so do Butters.

Limes are worse off than any and likely to be more so.

Our quotations are, for round lots from the wharf Small White and Pea, $3 12½, Bayos, $3 40, Pinks, $3 75, Red, $3 75; Butters, $3¼, Limes, $3¼

VEGETABLES—

We quote, Carrots, 30@35c; Turnips, 75@85c 100, Cauliflower, 60@75c ₱ doz, Cabbage, 60@75c ₱ ctl, Garlic, 2½@5c ₱ lb, Celery, 50 ₱ doz, Dried Okra, 25@30c ₱ lb, Dried Peppers, 12@13c ₱ lb; Tomatoes, 50@75c ₱ box; Artichokes, 40@60c ₱ doz; Lima Beans, 5@6c ₱ lb; Beets, 75c ₱ ctl; Parsnips, $1@1 25 ₱ ctl; Marrow Fat Squash, $8@10 ₱ ton, Mushrooms, 8@10c ₱ lb.

FRUITS—

Limes are in good demand at high prices.

We quote: Domestic—Strawberries, $8@— ₱ chest;

Apples, 50@$2 00 ₱ box, Pears, 50@$4 25 per box, Grapes, 50c@1 00 ₱ box, Cape Cod cranberries, $18@50 ₱ bbl, Western do, $17 00@17 50 bbl.

Tropical—Lemons, 50@75c ₱ box for Sicily; Limes, $11 00@15 00 per box for Mexican; Bananas, 12½@15c per lb; Bananas, $7 50@8 00 per bunch, California Oranges, $2 25@2 50

NUTS

We quote Chestnuts, 6@6½c ₱ 100; California Walnuts, 8@9c; Chili do, 7@8c; No Soft shell Almonds, hard shell, 7@8c; soft shell, 13 @15c, Filberts, 11@12c, Pecan, 12@13c, Brazils, 5@6c, Brazil Nuts, 12@13c, Hickory Nuts, 7@8c

HONEY

We quote Extra-bee, 6½@7½c; Ex White Comb 18c, White, 15c, Dark, 12½c

BEESWAX

We quote 28@30c per lb.

DAIRY PRODUCE

Strictly choice Butter is very scarce and has advanced. California Cheese also is very scarce, and is held at higher figures than for years

We quote Fresh Roll, 20@22½c; Choice, 35@40 Fair to Good, 22½@30; inferior lots from common dry stores, 16@17c; firkin, 20@22½c for old and 22½ for new, Eastern, 17@17½c, Pickled Roll, 25@ 27½, Cheese, California, 10@17½c for choice, 11@ 12½c for Fair to Good, Cream, in drums, 16@18c; Eastern, 17@18c, Western, 8@12c

OLEOMARGARINE

We quote the range from 20@22½, according to package

EGGS

Eggs are beginning to come in and prices are on the down ward grade. The Eggs coming in now are fresh laid, the moulting season being just about over

We quote, California Eggs, Choice Ranch, 32½ to 35c per doz, Eastern, 32½@37½c

HOPS—

Receipts of the week, 348 bls

The market is not so active as last week, though prices are unchanged. The stock of choice Hops is getting reduced, and the crop is not coming to pick from as thick as usual. The New York market is firm, but business is rather stagnant

ONIONS

Poor are plentiful, choice scarce and sell readily at $ 0 to 3 50c.

Receipts of week, 2598 sks

POULTRY—

Asis to be expected the principal demand at present is for Turkeys, which go off freely, though at arregular prices. Other descriptions are in light demand and rather weak

We quote Turkeys, Live Gobblers, 22@23c ₱ lb; Turkey Hens, 22@23c; Dressed, 24@26c Young Roosters, $5 50@6 50, Old Roosters, $5 50@6 00; Hens, $6 00@7 50, Broilers, $4 50@5 00 according to size, Ducks, $7 00@8 50 ₱ doz, Geese, $2 00@ 2 50 per pair

GAME—

The market has been well supplied during the week and prices are lower.

We quote: Quail, 75@$1 00 ₱ dozen; Hare $2 00@2 50, Rabbits, small, $1@$1 25, cotton tail, $1 50@1 75, Deer, saddle, 6@7c per lb, Sprigs, $2 25@2 50, Widgeon, $1 25@1 50, Mallards, $3 00@3 50, Teals, canvas backs, $4 00@4 50 per doz, common snipe 50@75c ₱ doz, do English, $1 50@2 00, doz Gray Geese, $2 50@2 75 per doz, White Geese, $1 50@1 75, Honkers, $5 per doz.

POTATOES

Potatoes when they sell at all are nothing.

No change in situation since our last report the same condition of affairs exists, only more so. The market is low at its shippers continue sending on their Receipts of week, 22815 sks

We quote Salmon Reds, Early Rose 100@50c; River Reds, 25@35c; Tomatoes and Petaluma, 65c, Cuffy's 100@80c, Humboldts, 85c, Sweets, $2@2 25.

WOOL

Receipts of week, 13733 lbs

For Wool market see Wool Department.

HIDES, SKINS, Etc.,

Heavy Salted Steers, over 55 lbs, 10@11c per lb Medium Salted Cows and Steers, 50@55 lbs, 8@9c Light Salted Cows and Steers, 30@50 lbs, 8c per lb Salted Kips, 30 per lb Salted Veals, 12@ per lb. Salted Calf, 15@16c per lb.

Dry Hides, prime selections, 17c—; do light, Dry Kips, do, 17c—; do light Dry Calf, do, 17@21c per lb.

Freights and Charters.

The deadest property in California to-day, dearer than Comstock mines, is ships. Since our last, ships have gone down into depths hitherto unimagined as possibilities. We felt last week we were stating a horrible truth when we said iron ships for New York, C. K, could be had at 35s 6d, and wood vessels, lower of three at 22s 6d. Since then a fir t class iron ship has been chartered at 27s 6d Cork for U. K orders. Of course all vessels controlled by the owners are out of the market and laid up at these prices. The charterers, to arrive, are the sufferers and £1, 0 0,000 would not requisite them for their losses Add to this half a million of the ascertained and prospective losses of vessels, so chartered and loaded on charterers account. All the comes out of California profits and must be charged to the debit of June northern. A wooden vessel to-day under charter, if offered for re-charter, could not get more than 20s or 21s for Liverpool direct. Owners not under charter would rather run an expense of 1s 6d to 3s per month in waiting and take their chances for the future than incur a certain and enormous loss on a voyage. The latest hour on Wednesday evening showed no improvement in shipping. We cannot charge any mis take in judgment on those who chartered vessels to arrive; the elements, on which no man can base a business calculation with absolute security, did the mischief

MERCHANDISE MARKETS

The [illegible] [illegible] are for car load lots and [illegible] [illegible].

AGRICULTURAL IMPLEMENTS.

Cocoa, 45c ₰ lb, Colman's Mustard, 60c ₰ lb.

COAL—

The aggregate arrivals of Coal this week from Foreign ports have been unprecedented in the annals of California, and if circumstances had not strongly favored the holders, there would have been a disastrous demoralization in prices, but the limited quantity on hand, combined with a large proportion of the importations going direct to consumers, has fully sustained the market.

In the history of the Coal trade it is safe to say it will never be repeated.

Holders are fully aware that the quantity afloat and the quotations made for present loading, cannot seriously affect future prices.

Coal is the only Foreign article of any magnitude that to-day shows a profit on cost of importation.

Cumberland and Anthracite grades cannot fail to feel the present hardening of prices on all other grades of Coal.

Importers' prices of coal Foreign and American, to arrive: Australian, $8@8 25, Liverpool Steam, $8@8 25, West Hartley, $8¼@8½, Scotch Splint, $7¾@8, Cardiff Steam, $7¼@7½, Lump Lehigh, $13@13¼, Egg Hard, $11½@11¾, Cumberland, bulk $10½@10¾. Spot prices are as follows: Australian, $8 50, Liverpool Steam, $9 00, West Hartley, $9½, Scotch Splint $9 00, Cardiff $8 00, Lehigh Lump, @$13; Cumberland, bulk, 11 50, Egg Hard, $11 00.

Winchester Metallic Cartridges, rim fire, according to brand, from $2 50 to $16 00 ₰ 1000, celntra fire, according to brand, from $8 50 to $35 lb 1000, U S Cartridges $100 ₰ 1 000.

IRON—

Iron and Coal appear to work in an inverse ratio, the former has declined on account of excessive importations, and can be purchased to-day at fully $2 00 per ton less than same can be imported for to-day. The result of this will be, several months will elapse without any Pig Iron being loaded, meanwhile the stocks on hand here will gradually become depleted, and eventually a better feeling must prevail.

Those having the courage to buy now will assuredly become benefited by their outlay.

Importers prices of Pig Iron, Foreign and American, to arrive: Shotts No. 1, $27½@—; Glengarnock, $26 00@—; Eglinton, $25 00, Clay Lane White, $23 50; American, Eastern, Soft, $28 00. Spot prices are as follows: Glengarnock, $25 50, Eglinton, $25 00; Clay Lane, white, $25@; Shotts No 1, $28 50; American, Soft Eastern, $30. Copper Gap Nos 1 to 4 $32 50@$35 00.

QUICKSILVER—

The market is without change and quotable at 31½c.

RICE—

Asiatic in a little better demand at unchanged prices.

There is no good No 1 in the market. Hawaiian is selling lower than some weeks ago, but it is still claimed that the Rice which sells at the inside figure is of poor quality. The Bell Rock brought about 150 mats of Rangoon Rice, being surplus stores, which is offered in the market.

We quote Mixed $4 10@— No 2 China $4 65@4 75, good No 1 $5 50@6 00c; Extra No 1 very scarce at $6 75. Hawaiian $4 62½@4 75.

SALT—

Liverpool fine we quote at 16 @ 20 ₰ ton. California, $6@10 for Bay, do crystal, $10@15 Carmen Island fine, $16@22, do coarse, $12 do do half ground, $9@11.

SPICES—

We quote: Black Pepper, 15@16c; White Pepper, 22@ c, Allspice, 12@15c; Cloves, 22@27c; Cassia, 9@10c; Ceylon Cinnamon, 45c@50c, Ginger, 8@15c, Nutmegs, 65@—, Mace, 60c; Borneo Ginger, 16@18c.

SUGAR—

RAWS.—The business in grocery grades during the week has been light, being confined to the sale of 746 kegs of Hutchinson at 8½c. This is a reduction of an eighth of a cent on last week's prices.

REFINED. The local demand during the early part of the week was very good but was broken by the holiday. The New York market is about steady, with a moderate demand, at a shade weaker prices.

We quote New York prices yesterday, A crushed 9@9⅛c, Granulated 8c, and Standard A 7½@7 9-16c, Yellow C 6¼@7¼c.

We quote local refinery rates, prices subject to change without notice.

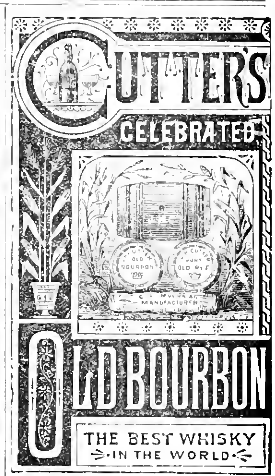
(A) Fat Cube Sugar, in bbls, 10⅜c; (A) Crushed Sugar, 10½c, Extra Powdered sugar, in barrels, 8c. Fine Crushed sugar, in barrels, 10½; Dry Granulated sugar, in barrels, 10¼c; Extra Granulated sugar in barrels, 10c, Extra C 9½c; Golden C sugar, in barrels 9c, D sugar in barrels, 8½c, Extra Fine Powdered, in bbls, 11½c; Confectioners' (A), 10c; El Dorado C, in barrels, 9¼c; Mariposa C, 8¾c, Nonpareil, 8½c; half barrels, ¼c, and boxes, ½c, more for all kinds.

TIN, ETC.—

I. C. Coke Tin Plates, from first hands:	Spot.	To arrive
A B Grades	....	....
Ysputty "	$6 15	6 25
Good B V " / Ordinary " / Common "	$5 75@6 10	$6 00
Lantwit "	...	...
I. C. Charcoal, Alloway Grade	7 00	7 00
" Terne Plates (Roofing)		6 35

We quote: Pig Tin, on spot, 22½c.

A Nevada man who was offered $25,000 for what everybody supposed was a diamond in the rough hung on to the stone until fifteen cents was the highest value given it by an expert. The owner of it will permit you to kick him on very reasonable terms.



Special Notice.

For the last twenty years this Whisky has taken precedence of every other brand on the coast; and for a quarter of a century, as shown by trustworthy analyses, has preserved its original purity.

Recommended for medicinal use by our best physicians as the only safe stimulant.

Entered at the Post-Office as second-class matter.

A. D. BELL, Editor.

FRIDAY NOVEMBER 30, 1883

The new railroad time (75th meridian) has been adopted in Baltimore. The new time is 6 min. 28 sec. earlier than natural time.

The Los Angeles *Herald* says one of the tunnels run into the Sierra Madre for the purpose of getting water for irrigation has been doubly successful. A fine stream of water was obtained and ore bearing $40 a ton in gold.

The daily winter consumption of coal in this city is about 2,800 tons or 84,000 tons a month. The arrivals last week were 60,000 tons, but yet the market advanced. There is only about 100,000 tons, for ign. known to be due here between this and April. The output of northern coast and Vancouver coal is increasing, but that of the Mount Diablo mines is falling off so that there is every prospect of coal becoming scarce, as there is no inducement in the present condition of the freight market to wheat ships, to send vessels from Australia to this port.

In another column we reproduce a short account of the Champagne Sugar Works, the first large sorghum sugar house erected in the United States, and which is now said to be a financial and commercial success. And it will continue to be, if the sugar duties are retained. Napoleon himself could not have made beet sugar a success in France, if war and tariffs had not prevented free competition with West Indian produce, while it was struggling for a foothold.

We cannot agree with the Colusa *Sun* in its Free trade tendencies but we do most heartily agree with it in its approval and defence of Governor Stoneman, in his refusal to call an extra session. No large taxpayer wanted an extra session, no Democrat who had no part in "taxenting" wanted an extra session. None but mere politicians and lobbyists, candidates for clerkships, page appointments etc wanted it. It would have ruined the Democratic party had the Governor called it. Governor Stoneman has, as every other man does, made some mistakes, but in refusing to listen to importunities of "bread and butter" Democrats, and the pressure was very great, he has atoned for all and twice over. Moreover Governor Stoneman not only has refused, but has given reasons for his refusal that cannot be gainsaid and reasons that have convinced every honest doubter. We are the more pleased to be able to say this because though we have a warm admiration and strong personal liking for the General and did all that was in our humble power to procure his election, we have been compelled from a sense of duty, on at least two occasions to criticise his official actions.

To Hawaiians.

After January 1st, 1884, postage of fifty cents will be added to the subscription price of the MERCHANT, making the cost to Hawaiian Island subscribers $3.50. We do this in consequence of the change in the rate caused by the Hawaiian Kingdom entering the Postal Union.

The City of Sydney on Monday took on board her cargo 4,669 cases 25 kits 64 half barrels and 171 barrels of Salmon for Australian ports, valued at $25,272.

The Petaluma *Argus* complains of the Santa Rosa postoffice. The MERCHANT has good grounds for complaint against several of the county offices.

John Ruskin, a good man, says many noble things, and sometimes some very foolish ones; but he said something that all should listen to and think over when he said "We want one man to be always thinking, and another to be always working, and we call one a gentleman, and the other an operator, whereas, the workman ought often to be thinking and the thinker often to be working, and both should be gentlemen in the best sense. The mass of society is made up of morbid thinkers and miserable workers. It is only by labor that thought can be made healthy, and only by thought that labor can be made happy, and the two cannot be separated with impunity."

Mr. Speaker.

The next Speaker of the House will be chosen within a few days and as that officer will appoint the Committees, it is a matter of great importance to California producers and manufacturers whether his tendency is to Free Trade or Protection. California will be represented in Congress by six Democrats and it is said that these six votes will be divided between Cox and Carlisle. The second candidate is favorable to reductions in the tariff, leading ultimately to Free Trade. Not one of the six, Rosecrans, Sumner, Glascock, Henley, Tully or Budd, has any knowledge of, or interest in any productive enterprise. One is a general with a grievance, another is a short hand reporter, and in every respect a noble fellow, the other four are lawyers. Every thing we produce or make can be rendered less profitable to our people by a mistake in legislature. What would become of our fruit business, our wine business, our wool business, our iron interests, our coal and a hundred other productions and manufactures, if Sunset Cox could frame a tariff to his liking. They would "go where the woodbine twineth." Randall is more in accord with the views of Californians than either Cox or Carlisle. Our Congressmen should be told in time that they were not sent to Washington to put in force the exploded theories of the grand old Democratic party, theories that had their origin in the minds of Southern cotton planters who are dead and gone, nor to enrich British or American merchants in New York, and other members of the Cobden Club, but to take care of California. There is not a vineyard, an orchard or a factory in this State whose future prospects will be quite so clearly bright, if Cox or Carlisle, or any Free Trade Democrat, is made Speaker of the House of Representatives.

The California Immigration Association makes an excellent showing of results, and deserves the support of every merchant and employer of white labor.

That the Sacramento Woolen Mill is selling blankets at retail.

That the capitalists are all down on the silver dollar, but the hand workers are all in favor of it.

That women should make good clerks in drug stores, they already know so much about quack preparations.

That as wives are no longer obedient, the church no longer compels them to promise to obey.

That the next President, it is said, like the present, will be a man. Four years ago the next President was a woman.

That a man may be a traveler and not be a drummer, and a drummer may travel and not be a salesman.

That the editor who insists on his original editorial going into the form to the exclusion of superior reprint, is often more vain than wise.

That Beecher will do anything, say anything, believe anything for notoriety. His latest is joining the Free Traders. What salary does the Cobden Club pay him?

That $76,000 was not much to pay for a whole fleet of merchants and other vessels, which had cost $6,300,000, but Mr. Mighel thought that was all they were worth, and it was probably right.

That as Beecher, the well fed infidel parson, thinks a working man should support a family on a dollar a day; no wonder that he is preaching free trade in order to carry his opinion into practice.

That Red Bluff would be an excellent locality for a mill to spin woolen yarn. The *People's Cause* seems inclined to work up such an enterprise. We hope its editor will succeed.

That last Monday there were probably 1,000 British born in these United States for every one that departed from New York on evacuation day, a century ago. What the British lost in war they have gained in peace.

That we see by our interior exchanges that questions of sewage and cleanliness are being discussed. These editors can do their constituents no greater service than arouse them to action on matters of hygiene.

That an entomological chair ought to have been established in our University years ago, but it is not too late—and, moreover, not only should fruit growers but merchants, who handle fruits, green, dried or canned, should contribute toward its endowment.

That most girls are brought up with the idea that the object of their life is marriage, and not one in a hundred is taught how to manage a home or train a family. Their grandmothers knew less about the ologies, but a thousand times as much about the duties of a wife and mother.

That unless the New York dailies lie, and they are terribly given to that vice, young ladies, whom parentage, nature and good nursing have favored, are not above turning an immodest dollar, by allowing themselves to be photographed and their fac similes sold for their profit. This is a new way of obtaining pocket money.

That the Anaheim *Gazette*, when it admits that the Cloverdale *Sentinel* may know more about some vine pests and diseases than itself, may be right, but it should learn all it can and as fast as it can. We hope it may not be soon, when Anaheim vineyardists will need information on these points. It won't do for the Anaheim *Gazette* like the foolish virgins to be without oil to trim its lamp when the cry is heard "the bridegroom cometh" even though that bridegroom be phylloxera or some other dread oil insect.

RETAILERS' CORNER.

This week has been a very good one as regards trade. The orders however, were principally small ones, and from Retailers having close and direct communication with the city. The orders were in a great part for goods suitable for the Thanksgiving trade. Staple groceries have also been in demand to a certain extent, but were principally to fill up assortments.

SUGAR.

The demand during the week has been very good, both for refined and grocery grades, but the trade in Grocery grades is confined to Hutchinson Ky Sugar which was sold this week at an eighth of a cent below last week's figures. There is no bag sugar on the market. The New York market is about steady with a moderate demand.

COFFEE.

The demand during the week not only for local consumption, but also for shipment East, has been good during the week and stocks are fast being reduced; the stock is now only 6,500 bags against 8,000 bags last week and 10,000 bags the week before. At this rate we will soon have the stock of Central American completely exhausted and have to rely entirely on importation of Rio. Our people will not take to the Rio coffee, as it is entirely different in taste and strength to the Coffee we have been in the habit of using. The New York market is unchanged from last week, being still firm, with advances on the lower grades.

RICE.

Asiatic Rice is in a little better demand at the same price as last week. This is the first time for some weeks that we have not had to report a decline in Mixed. Good China No. 1 is entirely out of first hands. We have reported for some weeks sales of Hawaiian at lower prices than the regular rate, though they have always been reported as of second quality. This week there have been sales of Fair Hawaiian at an eighth of a cent off. The Bell Rock, which arrived last week, brought about 150 mats of Rangoon Rice, being surplus stores, which are offered on the market.

CANNED GOODS.

The Canned Goods trade at present is extremely dull, there being nothing done except in a retail way. There are no Eastern orders on the market at all, and our canned goods brokers are spinning yarns so to kill time. The stock is light, and many of the smaller fruits are out of first hands. In Chicago the Canned Goods market has also reached bed rock, and a change for the better is soon expected.

DRIED FRUITS.

The above remarks in regard to Canned Goods apply to a certain extent to Dried Fruits. There is no Eastern demand, and a very light local trade. The *Northwestern Grocer* of Chicago says: "California fruits are very firm, but no further advance, other than was reported in our last issue, is noted. Late advices from California state that an advance has occurred in that market, plums especially being very strong."

THE AUSTRALIAN MAIL.

Since our last issue we have received some information, taken from the report of the Postmaster General of New Zealand to the Parliament of that colony.

"The negotiations for the continuance of the San Francisco service have resulted in New South Wales and New Zealand jointly agreeing to renew the contract at a reduced cost, for a period of two years from November next, but with the proviso that, unless a contribution in aid of the line is received from the United States, the renewed service shall only be continued for twelve months. The negotiations were only concluded in May last. The renewal terms are those proposed to the Government of New South Wales, and are set forth in the following resolutions submitted to and approved by the Parliament of New South Wales:

"That, subject to the Imperial Government agreeing to continue to convey the mails to San Francisco as heretofore, the contract between the Colonies of New South Wales and New Zealand with the Pacific Mail Company be extended for a period not exceeding two years from the expiration of the present contract in November next, at an annual subsidy not exceeding £50,000, of which the portion falling upon this colony shall not exceed £18,750, and subject to the following conditions, namely: That it shall be optional for this colony to withdraw from such extended contract at the end of twelve months, on giving three months previous notice, in the event of the Pacific Mail Company not having obtained from the United States Government, or from other sources, a contribution equal to one-third of the total annual subsidy for such extended contract, and in diminution of the subsidy. That the service shall be performed with the acceleration upon the present contract-time of at least twenty-four hours on each voyage to and from Sydney and San Francisco during the first year, and during the second year at least forty-eight hours, subject to the same terms, conditions, premiums and penalties as heretofore; with this exception, that the Company be relieved from keeping a fourth steamer, but that such shall not absolve them from the penalties of any failure.

"These terms having been accepted by the contractors, the amended form of contract will be executed without delay. The subsidy paid the Pacific Mail Company under the existing contract is £72,500 per annum; and the agreement that the renewed service shall be performed with three instead of four boats, is the probable explanation of the contractors consenting to renew the service at £50,000 a year, or £22,500 less than what is now paid by the colonies. Of the present subsidy, New South Wales pays £40,000 and New Zealand £32,500; but under the new agreement, New Zealand will pay £31,250, and new South Wales only £18,750, or £21,250 less than what is paid at present, the Government of that colony urging that the service was of no value as a mail-line, an that, even for commercial purposes, it was not worth more than £18,750 a year. As it was impossible to obtain a larger contribution from New South Wales; and, as this colony's share of the proposed cost was within the limit fixed by Parliament, it was deemed advisable to secure the continued co-operation of New South Wales, even on these inequitable terms.

"The consent of the contractors to reduce the time by twenty-four hours the first year and two days the second year is a highly important concession. Fast mail-trains, to perform the journey between San Francisco and New York in five days, will within the next few months be running; and with the improved class of steamers that are from time to time placed in the Atlantic trade, it is not much to predict that within eighteen months or two years, the time between Auckland and London will be reduced to thirty-two or thirty-three days.

"The condition that the renewed service shall not extend beyond twelve months, unless the United States contribute, indicates to the people of that country that the colonies are no longer inclined to maintain the service unless assisted by the States. Mr. Creighton, who has made a special visit to Washington and New York in connection with the renewal of the service and other matters affecting the colony, has reported that there is reason to hope that the next Congress, which meets in December, will, in some form or other, recognize the service.

"The performance of the San Francisco service has been characterized with more than usual punctuality, and on no occasion during the year has the delivery of mails exceeded the specified time. The average delivery was shorter than in any former year.

"RECEIPTS AND PAYMENTS ON ACCOUNT OF THE SAN FRANCISCO MAIL SERVICES FOR THE YEAR 1882

Dr.			
Subsidy to Pacific Mail Company	£32,500	0s	0d
Bonus Paid Contractors	3,164	10s	0d
Intercolonial Services, Mail Agents, etc.	6,790	0s	0d
Total	£42,454	10s	0d
Cr.			
Postage from London Post Office	£11,373	10s	2d
Postages collected in the colony	19,016	16s	7d
Receipts from intercolonial colonies	2,777	16s	0d
Contributions from United States Government	3,080	1s	6d
Total	£36,248	4s	3d
Net cost to the colony	£4,176	5s	9d = £20,880.

"The estimated net cost for the service for 1881 was £5,358 7s 8d.

SORGHUM SUGAR.

Utilizing Bagasse and Sugar Cane Trash as Fuel Under the Jarvis Patent Furnace.

The Champaign Sugar Works, Champaign, Ill., were the first large sorghum sugar works ever started in the United States. They have ground the cane this season raised on about 1,000 acres of land, and the result is a perfect success in the way of making a first-class quality of sugar that polarizes 97 degrees, and much sweeter than sugar made from cane or beet-roots. For years experiments have been made to find out some way to change sorghum syrup into sugar. The attempt was unsuccessful up to last year, when the State of Illinois offered a bounty to any one who would succeed in granulating the syrup into sugar. Experiments made at the State University of Illinois, in Champaign, by Profs. Wiley and Scovell, succeeded in accomplishing the result. A ready sale is found for all the sugar and syrup made, and the success here will cause a large number of sugar works to be erected all over the West, for sorghum cane will grow where corn can be raised, and where farmers can make $15 an acre in raising corn they can realize $30 an acre in raising sorghum cane to sell to these factories.

The result of this discovery is likely to make as great a change in this country as the making of beet sugar has in Europe, where to-day two-thirds of all the sugar in the world is made. Out of a total production of three million tons, France, Belgium and Germany produce two million tons. The Champaign Sugar Works have introduced all the modern improvements. The machinery, both rand vacuum pans were made by the Atlantic Works in Brooklyn, N. Y. They use both the Western and Haworth centrifugals. The sugar cane trash called "bagasse" is carried on conductors directly from the grinding mill and dropped into the furnaces in its green, wet state. The boilers are set with the Jarvis patent furnace, and hot air is discharged directly over the fires, igniting the gas generated by the burning fuel.—*Cotton, Wool and Iron. Boston.*

WOODEN WARE.

In another column will be found an advertisement notifying the trade that the Coos Bay Stave and Lumber Company, whose mills are at Empire City, Oregon, an immense factory on Sixth and Channel streets, with main office at 323 Front street, have purchased all the machinery for making wooden ware of the three firms of Armes & Dallam and E. K. Howes & Co., of this city, and Nichols & Co., of Sacramento.

With this machinery and all other new appliances of the trade, the Coos Bay Stave and Lumber Company is prepared to manufacture all kinds of wooden ware, and also tight barrels, kegs, kits and pails, for packing butter, fish, vinegar, pickles, lard, etc. This factory is now the most complete and the most extensive of the kind in the United States, and is in full blast. Being a home industry, it ought to be liberally patronized, and the Company is prepared to execute all orders for goods in its line with dispatch and furnish the best articles at moderate prices.

WHISKEY AND TOBACCO TAXES

Deputy Collector Bean, editor of *Bean's Pacific Coast Internal Revenue Guide*, has interviewed a number of San Francisco firms on the question of reducing or abolishing the tax on whisky, and the following opposse any reduction: A. P. Hotaling & Co.; Wilmerding & Co.; A. Frankhausen & Co.; Siebe Bros. & Plagemann, Braunschweiger & Bumstedt; Wolff Bros. & Co.; Lilienthal & Co.; Carroll, Adams & Co., E. Martin & Co., Luchman & Jacobi, Sam Luchman & Co.; Moore, Hunt & Co., Hucken & Schroder, Dunker, Siebe & Co., E. McGary & Co.; E. A. Fargo & Co.; Naher, Alfs & Brune; Livingston & Co.; Taussig & Co.; Lowe Bros., Roth & Co.; David Porter; Pacific Distilling Company; California Distilling Company; Van Bergen & Co.; and James Winslow. One firm—Kelly, Gilchrist & Co.—favor a reduction of taxes 50 cents.

A Washington correspondent of the *U. S. Tobacco Journal* says that President Arthur has a plan to submit to Congress at its coming session, which is to "abolish the tax on tobacco, remove the tax on alcoholic distillations used in the arts and sciences, and reduce the whisky tax to fifty cents a gallon." And the same correspondent thinks that legislation will take that shape. As a rule the distillers and the whisky trade do not favor any tampering with the present taxes. They all want it let alone. The national banks are against the reduction of the revenue, as this to check the calling in of the bonds on which their circulation is based. All manufacturing interests object more than spirits and tobacco want the blow to be struck at the taxes collected by the Internal Revenue Department rather than those derived from customs duties.

Finance and Trade.

The demand for Money is rather quiet. It is too near the close of the year to look for much business in the inauguration of new enterprises requiring money, and no one is disposed to enlarge present activities at this season of the year; consequently, the only inquiry is to keep matters in proper season on the old basis. General business is accommodated to the extent of requirements at 7 per cent. for average paper, though the extremes are 6@9. Money is loaned on city real estate at 6@7. Domestic exchange is quoted at 10c premium for sight drafts on New York and 15c for telegrams. Bank bills on London are drawn at 489@489¼d, for 60 days, commercial bills on London, 487½@488. Refined Silver, 135@141¼ per cent. discount, Mexican Dollars, 88@89c.

Trade Failures.

There were 205 failures in the United States reported to *Bradstreet's* during the week ending Nov. 10th, 14 more than the preceding week, but more than the corresponding week of 1882 and 89 more than the same week of 1881. Compared with the previous week the middle states has 15, a gain of 10. New England states 28, a decrease of 1. southern states 38, an increase of 2, western states 64, a decrease of 35, Pacific states and territories 20, an increase of 10, Canada 18, a decrease of 11. The principal firms reported as having failed were Boreh ert & Co., paints, and Van Orden Brothers, seeds, New York city; William M. Wilson & Co., wholesale drugs, Philadelphia; H. C. Tillinghast & Co., hides and wool, Cleveland, Cummings & Wetherill, wholesale dry goods, and the Booth & Osgood Manufacturing Company, school furniture, Chicago; L. I. Brown & Co., wholesale leather, Cincinnati; Higbee & Co., millers, Bellaire, Ohio; Iles Brothers, iron manufacturers, Newcastle, Pa. In the principal trades they were as follows: General traders 30, grocers 28; shoes 12; dry goods 12, clothing 11, manufacturers 11, liquors 9; boots 7; fancy goods 6, drugs 6; millinery 5, tobacco and cigars 5, hardware 4; jewelry 3, grain, flour, etc., 3; lumber 3, tanners 3; hotels and restaurants 3; harness 3; paint 2; leather 3; men's furnishing goods 2; produce and provisions 2; hats 2.

TOBACCO MARKETS.

SAN FRANCISCO.—Sumatra Leaf seems to be in a fair way for what might be called a boom. The '83 is nearly gone, and good '82 is no longer overlooked but eagerly sought for. Indemnestic leaf of '82 there have been some sales at prices remunerative to growers and importers. The quality is pronounced by those who have tried it very fine and only needing a little more age. Some Leaf houses report a scarcity of Havana wrappers and fillers; others report a good stock on hand. The stock of leaf now in San Francisco is large, and in the aggregate probably heavier than in any former year. The demand, for the moment, however, on the whole, is light.

We understand that a large New York cigar firm, well known in this market, has purchased from the assignees of Culp & Co. the stock of California Leaf grown near Gilroy.

Trade in manufactured Tobaccos is dull.

Cigar manufacturers are fairly supplied with orders.

Mr. Charles Siebler, the managing partner of P. Lorillard & Co., is in this city, and is accompanied by Mr. Griswold Lorillard, a young gentleman related to the well known family. It is reported that a change in the Pacific coast agency is about to be made, and that in the future Mr. Griswold Lorillard will represent the firm of P. Lorillard & Co. in this market.

As California has more interest in the settlement with Tobacco dealers for rebate on the stock of Tobacco on hand on May 1st, when the tax was reduced, than any other State, it is desirable that our Representatives in Congress should look after an appropriation being made for the prompt payment of these claims.

New York Tobacco Leaf.]

NEW YORK, Nov. 17th.—*Western Leaf*—Business has been quiet, with reported sales of 704 hog-heads, at prices ranging from 6 to 10½ cents. It is rumored—and the rumor is probably correct—that large transactions in logs have been effected, in fact, that the market has been pretty well cleared of them.

Buying in the planting sections is going on freely, and at higher prices than was expected.

Virginia Leaf—There was not much doing in Virginia tobacco the past week. Some good leaf was sold for export, and this with some small lots of wrappers comprised the reported sales for the week.

Seed Leaf. The demand for Seed leaf has been moderate since our last report, only 1,525 cases having changed hands.

[U. S. Tobacco Journal.]

NEW YORK, Nov. 17th.—The market was stagnant, and nothing worthy occurred. The situation is: A tremendous accumulation of poor tobaccos and a thin layer of really fine. The former can be purchased at the lowest figures, the latter at the sellers' figures, which are not as high as the outlook would warrant them to be. As there is not the shadow of a prospect that fine tobaccos will be cheaper, our readers will do well in laying in such stock at their earliest convenience.

[Western Tobacco Journal.]

CINCINNATI, Nov. 19th.—A better market was had for Cigar Leaf last Saturday than for some time last, the offerings amounting to 137 cases. Sales were 1 lot of 50 cases, Mt. Morris, Ohio, and Bodmann Buyers were out in force, and whenever anything that answered the common wants offered, bidding brought prices up rather lively. Ohio Seed constituted the bulk of the offerings. They were divided as follows: Miami 32 cases, 9 of which were rejected, Morris, 17 cases and 7 rejections, Ohio, 12 cases and 3 rejections, and Bo main 75 cases and 3 rejections. There was no decline from prices last week.

Nebraska has probably reached the climax of absurdity in the way of naming towns. One of the towns in that State has just been named Base Ball.

"I haven't taken a drop of fermented liquor for a year," said a man of questionable veracity. "Indeed! but which of your features are we to believe, your lips or your nose?"

JOBBERS' PRICES.

NOVEMBER 30 1883

The following Prices are those at which city and country Retail Grocers can buy in lots to suit their trade, and are corrected weekly.

Mr. Jos. M. Wade, of *Cotton, Wool and Iron*, seems to find an incongruity in the Merchant advocating the establishment of more wool n mills in California, and at the same time urging owners of stock in woolen mills to start long clothing factories to work up the cloth. We do not, we have the wool and we have the ability to manufacture it, but still most of our clothing comes from the East, ready made, and though of California wool is Eastern spun, woven, cut and stitched, we are of opinion California can do better.

An Opinion.

The San Francisco Merchant thinks that if some of the men who own wool factories in the Eastern States who confine the machines to spinning yarn, would come to California and take a look at the field, they would conclude to bring their machinery here without a season's delay; and express the opinion that any men of good reference and established reputation with $500,000 worth of machinery, could get gentlemen who are interested in wool in this State to join him in an enterprise such as spinning yarn which would lessen their dependence on the caprices and prejudices of Eastern wool dealers.

To all of which we assent, and think that in no place in California is there a better opening for a woolen factory than in our town of Red Bluff, situated in the midst of one of the best wool-producing districts, both in quantity and quality, in the State. The man who invests his money in a woolen mill in this town will not be compelled to go into the market to buy his raw material—it will be brought to him, and his investment will be a safe and a paying one.—*People's Cause, Red Bluff.*

We hope these items may reach the eye of some Eastern yarn manufacturer who desires to better his condition.

Wool from Australia to London costs in freight charges 1 cent per pound; the distance is about 14,000 miles. From Pecos to Fort Worth the charge is 2 cents a pound; the distance is less than five hundred mil s. One of these charges must be considered exorbitant.—*Texas Wool Grower.*

We know something about high local freights in California and high overland freights too, and the latter would be higher but for the opportunity of shipping by sailing vessels.

A wool manufacturing friend suggests that while a large mill for spinning yarn, where weaving mills could buy yarn of any class in quantities to suit, would be a convenience, its success would be seriously interfered with if the railroads were to rank yarns as manufactured goods, say as clothing, and charge freight accordingly on all sent east for a market. Surely we can count something on the good sense of the Railroad Company, or failing that on the power of the Railroad Commission.

Wool-grading will receive the encouragement it deserves. It is only a matter of time when all Texas wools will go forward in bales of uniform grades.—*Texas Wool Grower.*

It is only a matter of time when California wools will be graded at home. But it will, we fear, be a long time, unless we can cross our sheep men with a wise breed.

Cultivation of Vanilla in Mexico.

In Mexico vanilla is planted either in a forest or in a field. In the former case the undergrowth, climbers and large trees are cut down and removed, and the young saplings only preserved to serve as supports to the vanilla plant, preference being given to trees having a milky sap. Near each tree two cuttings of the vanilla plant are placed side by side in a shallow trench one and one-half inches deep and sixteen inches long, three knots of the stem being laid in the trench, and covered with dead leaves, brush, etc. The rest of the cuttings, to the extent of three or four feet, is placed against a tree and tied to it. The supporting trees should not be nearer than twelve or fifteen feet apart, to give sufficient room for the development of the plant. After a month the cutting will have taken root, and must be carefully kept from weeds and brush of all kinds. In the third year the plant begins to bear fruit, which it continues to yield for many years.

When the vanilla is cultivated in a field, the Mexicans first plow the ground thoroughly and raise on it a crop of corn. In the protection afforded by this plant, a number of young milk-bearing trees of the fig family grow, which in about twelve or eighteen months are large enough to answer as supports to the vanilla plants, which are then placed as above described. In Mexico and Guatemala the plant is allowed to climb up the trees, the fertilization of the flowers is left to nature, and a large number of flowers consequently remain unfertilized and the yield of vanilla is small. In a few days after the expulsion the flower falls off and the fruit commences to grow till the end of the first month; it takes, however, another five months before it is completely ripe. Each pod must be gathered separately, and not the whole cluster at once, the time to gather them being indicated by the pods cracking when pressed with the fingers. If too ripe, the pods split in drying, changing the color from yellow to brown and black. If not ripe enough, the fruit will lack fragrance and proper color. The ripe fruit has no odor at first, the agreeable odor of vanilla being developed by a process of curing. When the first fruit is drying an unctuous dark red liquid, called balsam of vanilla, exudes.

In Mexico the pods are collected and placed in heaps in a shed protected from rain and sunshine, and there left for a few days; they are then, if the weather is warm and clear, spread early in the morning on a woolen blanket and exposed to the direct rays of the sun; at about midday the blanket is folded round the beans, and the bundle is left in the sun for the remainder of the day. In the evening it is inclosed in tight boxes to "sweat" all the night. The next day the same treatment is adopted, and the beans, after expos-

---

ure to the sun, acquire a dark coffee color, the shade being deeper in proportion to the success of the "sweating" operation. If the weather is cloudy the vanilla is collected into bundles, a number of which are packed together in a small bale, which is first wrapped with a wooden cloth, then with banana leaves, and finally with a stout matting, which is firmly bound and sprinkled with water. An oven is then heated to 60 deg. C., and the bales containing the larger beans are placed in it. When the temperature has fallen to 45 deg. C. the smaller beans are introduced and the oven closed tightly. Twenty-four hours afterwards the smaller beans are taken out, and twelve hours later the larger ones. The vanilla has then acquired a fine maroon color. The drying operation then commences. The beans are spread on matting and exposed to the sun every day for two months. When the drying is nearly completed, it is finished in the shade in the place, and the pods are then tied up in small bundles for sale.—*Oil, Paint and Drug Reporter.*

THE WOOL MARKET.

We have to report a less active market than last week, for which possibly yesterday's holiday is partially answerable. The tone, however, is good, though there is no inclination to give or expectation of getting higher prices. The supply here and in the East is fully equal to the demand. Defective and heavy Wools hang while northern and mountain fall go off fairly. As usual, heavy San Joaquin and southern counties is neglected while dearer and higher Wools are to be had. Scourers are steady buyers, but only supply themselves from week to week, having no fears of any advance in prices.

In no line of agricultural production will study and attention pay better than in Wool. Our flockmasters are not sufficiently alive to the fact that they are missing considerable profits every year by not paying more attention to shed, to breeding in the hard weeks, and to shearing and the grading of their clip. Five hundred ewes, well selected and well cared for, if the clip is graded, will pay better than a thousand managed on the "happy-go-lucky" principle.

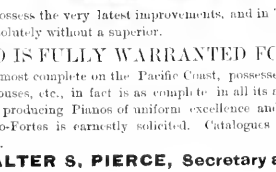
CALIFORNIA Piano Manufacturing Co.

INCORPORATED UNDER THE LAWS OF CALIFORNIA, MARCH 8, 1882.

Manufacturers of Strictly First Class

UPRIGHT PIANOS.

Factory, 431 and 433 Fourth St., corner of Bryant.
(Old Kimball Carriage Factory)



Salesroom, 30 New Montgomery St., under Palace Hotel.

Our instruments possess the very latest improvements, and in TONE, TOUCH and DURABILITY are absolutely without a superior.

EVERY PIANO IS FULLY WARRANTED FOR 5 YEARS.

Our factory is the most complete on the Pacific Coast, possesses every kind of machinery, steam, dry houses, etc., in fact is as complete in all its appointments as any Eastern establishment, producing Pianos of uniform excellence and durability. An examination of our Piano-Fortes is earnestly solicited. Catalogues and full description mailed on application.

WALTER S. PIERCE, Secretary and Agent.

American Sugar Refinery

Manufacturers of the Celebrated

CUBE SUGAR

JUSTICE BAKING POWDER.

"Put JUSTICE, Last Column."

SAN FRANCISCO, June 30th, 1883.

We beg to call your attention to our JUSTICE BAKING POWDER, each can of which we guarantee to be full net weight and to contain nothing but the purest Cream of Tartar and the best English Bi-carbonate of Soda, compounded on the most approved formula.

We make the price as low as it is possible to sell this quality of goods, desiring that the purchasers may feel they are getting value received. ALL IN BAKING POWDER, and that they are not involuntary contributors to extravagant newspaper advertising, or to the placarding of fences, as the ir int lligence must advise them is too often the case when they buy some other brands. At the same time, *Justice* to the manufacturer, *Justice* to the dealer, *Justice* to the consumer, and last, though not least, *Justice* to ourselves compels us to assert in unmistakable terms that, Lower *Mayistic, Far-fetched,* or *Sweetly Perfumed* the title by which any other is known, no better, more wholesome, more effective, more economical Baking Powder ever was or can be produced, than that we now offer you.

Justice should be found in every city and town throughout the length and breadth of the land, and we solicit your kind consideration to our efforts to place it there, feeling confident that the closest investigation and the severest ordeal to which Baking Powders can be subjected will prove its intrinsic merit and fully bear out all we claim for it.

With this introduction we are content to place our *Justice* Baking Powder before the public, and r ferring you to the accompanying memorandum of prices and style of packages at foot,

We are, very respectfully yours,

TABER, HARKER & CO.

VOL. XI, NO. 9. SAN FRANCISCO, DECEMBER 7, 1883. PRICE TEN CENTS.

The Sugar Duties.

It has not been often in the past three years that the MERCHANT has found anything in the *Chronicle* relating to sugar, with which it could agree.

An article which appeared on the 4th inst., in that paper showing that taking the duties off coffee and tea did not inure to the benefit of consumers to the extent expected, though the arguments, are somewhat exaggerated, are in the main correct, except so much as refers to the Hawaiian Islands. It would be hoping for too much to expect the *Chronicle* to make any allusion to sugar without attacking the reciprocity treaty with Hawaii. The point that the *Chronicle* makes that sorghum and beet sugar interests and Louisiana planters are as much entitled to protection as the manufacturers of cotton or wool fabrics or iron, and that if they are protected they will grow as these have done, are well taken. We give below the article in full except a paragraph on the Hawaiian, which not being a true statement has no bearing on the case:

A Washington paper urges on Congress a reduction of the duty on sugar to the extent of $50,000,000. That means the placing of sugar, with tea and coffee, on the free list, for $50,000,000 is about the whole amount of duty collected for the last fiscal year on sugar imports. A few years ago tea and coffee were dutiable imports. Some short-haired women and long-haired men in New England, New York and Ohio, raised a long outcry against this "indirect taxation of the tea table and breakfast table," as they called it; and Congress in a too generous moment, placed tea and coffee on the free list, in the foolish expectation, that to the extent of the revenue derived from these articles, they would be cheapened in price to the consumers here. It is not necessary to say that this expectation was never realised. Everybody knows that no reduction took place in the price of tea and coffee, to the American consumers, because of the abrogation of some $17,000,000 to $19,000,000 customs duties thereon. The foreign exporters got the whole benefit of it by simply raising the foreign prices of tea and coffee. If any one thinks the same thing would not be repeated with reference to sugar, should that articles also be placed on the free list, he is mistaken.

If, then, it is clear from experience that the consumers of sugar would not gain anything and probably lose by the placement of this article on the free list, and that the Government would certainly throw away $50,000,000 of its yearly revenue, the argument is conclusive against the policy proposed by the Washington paper. But this is not the whole of the argument against it. The home producers of sugar, whether from cane in Louisiana and Texas, sorghum in the Western States and some of the Eastern, or beets in California, are as much entitled to the benefit of protection as the makers of iron and steel machinery in Pennsylvania, of cotton and wooden goods in New England and Georgia and of other wares, as boots and shoes, hats, carpets, silks, etc., in most of the manufacturing towns of the Middle, Western, Southern and Pacific States. It will not do to reply to this that sugar production in the United States does not and cannot be made to supply a fourth of our demand for that article. This is what some of the Republican and protection papers of Pennsylvania are now saying. We remind them that the policy of protection was inaugurated half a century ago, when all our manufactures were feeble and the foreign imports of manufactured article at a higher ratio by comparison with the home production than imported sugar now is to the home production of that article. The protective policy stepped in and said to the New England cotton fabricators and to the Pennsylvania iron and carpet producers, "you shall have protection against the cheap labor and enormous capital of Europe." And they got it and it built them up to the wealthy and powerful position they now hold. We remind these papers also that fifty years ago France and Germany made even less sugar than America does now, and that now they not only make enough for home consumption, but have sufficient surplus to send England last year two-fifths of all she had to buy, and that sugar from sorghum, with the present degree of American protection, is a more profitable industry to the farmers of New Jersey, Illinois, Kansas and other States than the raising of wheat, corn, or any other staple crops. But if sugar is to be put on the free list, this rising and hopeful industry must inevitably perish, and with it all sugar production in Louisiana and Texas from cane as well, for it is not possible that American labor can compete on equal terms with the slave labor of Hawaii—[? ED. MERCHANT]—Cuba, Brazil, and the still cheaper coolie labor of India and the Philippine Islands. The stake at issue is the ultimate production from our own soil of all the sugar we consume, and this means a yearly value at the average for refined and unrefined of $200,000,000 now and double that amount twenty years from this date. A nation—a Congress—that would fling away such a stake without corresponding benefits to the consumer and at a cost of $50,000,000 a year to the revenue, is on the highway to ruin, and hopeless of the popular support when the people once come to an understanding of the subject.

Sumner's Postal Telegraph Bill.

When Charles Sumner was elected to Congress, it was a foregone conclusion that he would do all that lay in his power to establish a postal telegraph system that would place telegraphic facilities within the reach of the poor and place all newspapers on an equal footing as regards telegraphic news. For this end Mr. Sumner has spent his energies during some of the best years of his life, and his first act in Congress will be the introduction of a bill to carry his views into effect. He may not be successful this year, but if he carries the measure next session, he will have done well and justified that portion of the people who sent him to Congress to represent California.

Congressman Sumner entitles his postal bill "A Bill to Enlarge the Postal Facilities of the People of the United States." It goes upon the theory that the telegraph should have been and ought always to be a part of the postal system; methods and conveniences of the people of this country. It empowers and instructs the Postmaster General to proceed immediately, with the advice of a competent chief engineer and a chief electrician, and the coupon to prepare and issue plans and specifications for the work of connecting the telegraph wire or wires of every city and town of the United States, south of the northern boundary of Washington Territory that contains a population of four hundred inhabitants or more. It is provided that work shall be begun as near as practicable simultaneously at the principal cities on the Atlantic side, and at Seattle, Washington Territory, Portland, Oregon, and at Yreka, Eureka, Sacramento, San Francisco, Los Angeles and San Diego in California. Bonds are authorized to be issued to the amount of $25,000,000, bearing interest at the rate of three per cent per annum and running for thirty years, redeemable in twenty years. The bonds are to be issued in separate amounts of $50 each, so that it may be in fact a people's loan in a savings-bank way, for the construction of the People's Telegraph Lines. All postmasters are made agents for the sale of the bonds, the rates of transmission are fixed at ten cents for every ten words or less, between all points, and five cents for each additional five words. Press dispatches are to be sent under such rules and regulations as shall guarantee perfect fairness and impartiality, at a charge not to exceed twenty cents for each one hundred words. Where a number of papers in the same city, or along the same route, take the same dispatches, the charges will be proportionately reduced, coming down as low as four cents for each one hundred words. Nothing in the Act is to be construed as prohibiting or restraining the Postmaster General from reducing the rates at any time between any places. Provision is made for branch lines to places of less than four hundred inhabitants; and nothing in the Act is to be construed as prohibiting the Postmaster General from establishing offices at any points along the originally prescribed routes for the lines. The Postmaster General may place the wires or cables on poles or under ground, as he shall determine to be most advantageous. He may establish telephonic and pneumatic connections wherever he thinks they will be of great public convenience or profit. In the larger cities and towns of the nation, contracts are to be advertised, with a view to give full notice and the largest possible competition for supplies of material and for labor, and the people of every locality along the prescribed routes will have an opportunity of aiding, if they so desire, in hastening the completion of the work on their immediate section. Provision is made for right of way, and the use of public land, timbers for poles or troughs. Provision is made for opening for business each section as soon as completed. This is a sketch of the main features of the measure.

THE WINE PRESS AND THE CELLAR.

BY R. H. RIXFORD.

For press notices see advertisement in another column.

J. B. J. Portal, the well known viticulturist of San Jose, writes in reference to Rixford's "Wine Press and Cellar" obtained from this office. "I find it full of valuable information to wine growers." Every vineyard owner or wine maker in the State who has not a copy of this work should send us $1.50 by postal note or in one-cent stamps and we will mail him the book by return.

The Fresno *Republican* complains that the *Chronicle* and *Examiner* seem to have a special grudge against Fresno County, and that the former never mentions the progress being made in that county, but can find plenty of room for a description of any pest that may appear in its orchards and vineyards.

A wine dealer of this city, who has had a large experience, told us the other day, that in his judgment, Malvasie wine rapidly deteriorated after the first year and it was a positive injury to mix it with Zinfandel, or even with any Mission unless it was for immediate use.

The San Diego *Sun* quotes the remarks of a Philadelphia importer on the relative merits of Bordeaux and California Clarets which are all right, but he then gives himself dead away by saying: These remarks need no further explanation than the repeating of the well known facts that three-fourths of the so-called Bordeaux is nothing else but American claret, repacked, unnaturally flavored, made unnaturally astringent by the addition of tannin, and then reshipped to America. The *Sun* ought to know that California exports no wine to France, or to any country in Europe, for commercial uses. Whatever the claret of Bordeaux imported to the United States may be, not one per cent., to say nothing of three-fourths can possibly be Californian, because we do not export it to Europe. The *Sun* is no farther from the truth when it says three-fourths of the wine imported from Bordeaux is Californian, than the the Philadelphia importer who says the receipts of claret from Bordeaux are rapidly increasing. It is for the interest of California viticulture that our papers should tell the truth and not manufacture lies that are absurd on their face.

The *Riverside Press* recently in a notice of the vineyard of R. B. Blowers of Yolo, stated that the yield in grapes and their equivalent in raisins, was 115 tons. The fact is that Mr. Blowers sold about 43 tons of table grapes, about 15 tons of grapes for canning, for wine making 70 tons and made 75 tons into raisins. This is over 200 tons of grapes from 45 acres of vines—part of which are only three years old, and the crop was short, Mr. Blowers' vines, like every body else's in his section of country, having suffered from the hot weather. Still there is a wide difference between 115 tons from a vineyard of that size and 200 tons, and the *Press* should make the correction.

In another column will be found a letter from Charles A. Wetmore, of this city, giving the programme of El Cajon Land Company. The terms on which this land is offered are more favorable to settlers than any we have heard of for years, and one has only to examine the samples of fruits, raisins, etc., grown on this and similar land in San Diego, without irrigation, now on exhibition at Mr. Wetmore's office to see the fertility of the soil.

Programme of El Cajon Land Company.

EDITOR MERCHANT: For the information of many who are inquiring as to the proposed plans of the El Cajon Land Company, permit me to explain to your readers the new programme as it is now develope — further particulars will soon be made public by proper advertisements.

The El Cajon Land company recently assigned all its interests in the portions of the Cajon grant, belonging to the heirs of Isaac Lankershim to Dr. Joseph Jarvis, freeing itself thereby of all obligations, and preparing for a reorganization on a new and novel plan. Mr. George West, of Stockton, and myself have been elected to the directory. Mr. George A. Cowles will also be elected at the next meeting of the Board; a distinguished vine grower in the northern part of the State will also be added as soon as the necessary transfer of stock can be made.

The company having full faith in the brilliant future of the Cajon valley for the production of the finest grades of raisins, wines and olives, has negotiated with Dr. Jarvis for the purchase of his rights under the contract with the heirs of the lamented Mr. Lankershim, whose faith in the Cajon was never less during his useful life than is that of the company. The lands controlled by this contract comprise a little more than 27,000 acres, of which about 10,000 acres are arable and the rest valuable for grazing. Ample water facilities are found in all parts of this property, none however being required for irrigation of fruit trees, vines and olives, unless citrus culture be pursued, in which latter case an ordinary wind mill, such as is used at Stockton, will be sufficient to irrigate twenty acres. The water in the wells is unfailing. A large area of the land is along the San Diego river, where actual experience proves that alfalfa can be very profitably cultivated without irrigation in our driest seasons—this year producing as much as ten tons to the acre. The variety of soils and situations within these lands offer inducements to all classes of farmers, horticulturists and viticulturists according to fancy. A portion of the Lankershim tract has been subdivided and laid out with wide avenues—about 3000 acres in extent on a perfectly even and uniform surface of the valley, most suitable to vine and fruit culture and the development of a prosperous colony or community. These lands were offered and in part sold during the past year at $75 to $100 per acre. I have no hesitancy in declaring that they are fully worth $100 per acre, and that they may become by reason of developments in the valley, worth equally as much as the famous lands of Riverside and Pasadena. Now, by reason of the new arrangements made with Dr. Jarvis, the company will cause these 27,000 acres to be offered at an average price of less than ten dollars per acre, to all those who subscribe to the stock of the company, which will be offered through a trustee, Mr. Bryant Howard, cashier of the Consolidated National Bank of San Diego, until the terms of his trust expire. Those who come into this new arrangement in time will be sure of securing a good investment and a beautiful home site. Arrangements have been made with the heirs of the Lankershim estate for the release of any portion of the platted and surveyed lands in the tract of 3000 acres referred to upon payment of a given sum of money; therefore it is our plan to make this tract the basis of our operations. There are 5000 shares of stock in the company and 27,000 acres of land secured by contract—a little more than five acres to each share. To all persons subscribing and paying for stock at the rate of $50 per share a portion of the platted and subdivided tract will be conveyed in fee simple at once, in the proportion of one acre to every two shares of stock; twenty shares of stock —price $1,000 will entitle the holder to select and receive title at once to ten shares of land in this tract, in a place where all is of uniform character and value, and his stock will represent an interest of 100 acres more in the property of the company. The ten acres so selected will be fully worth all that has been paid for the stock and the lands covered by the company will be sold so as to produce dividends to the subscribers, with which they may improve the lands selected in the community tract. In this way the selected lands will not cost the holders more than $10 or $20 per acre, each holder participating in the proceeds of the sales of the company on a mutual basis. Any number of multiples of ten acres may be selected, and none even so small as five acres if desired. To protect all parties subscribing to this stock, all the rights of Dr. Jarvis and also nearly all of the stock of the company, has been assigned to Mr. Bryant Howard as trustee. All expenses, interest and taxes during the term of the trust will be paid by Messrs. Jarvis, West and myself, and all funds received by the trustee on account of sales will be applied wholly to the payment of the amount due to Dr. Jarvis and the heirs of the Lankershim estate on account of the purchase of the tract. A clear title will be given at once for the lands selected in the community tract, 10 per cent. of the purchase price being permitted to remain on mortgage running three years with interest at 8 per cent., if desired by the purchasers. As soon as the contract price of the land has been fully paid off by the trustee, the remainder of the stock and its relative proportion of the community tract will be distributed by the trustee to the promoters of the enterprise, and all the remaining land, being about 25,000 acres, will be conveyed to the company. During the progress of this trust the company agrees, in writing, not to incur any expenses excepting those that may be absolutely necessary for the preservation of the company, so that the stockholders need not fear any mismanagement during this reorganization. As soon as the contract price is all paid up, the new stockholders by this plan, will control the majority of the stock of the company. Meanwhile the company agrees to negotiate sales of these company lands, as opportunity may offer, and to distribute the proceeds, as dividends to stockholders; all dividends to the stock held in trust to be applied to the extinguishment of claims on account of the purchase price, and this trust stock will be credited with this amount so as to reduce its price when sold to new subscribers.

We believe that we have devised a plan that will be popular from the start, and that will enable people to secure beautiful homes in the Cajon valley at the lowest possible price. For purposes of convenience, portions of the platted lands for immediate selection will be allotted to different parts of the State. Dr. Jarvis will superintend an allotment for San Diego, San Bernardino and Los Angeles counties; George West will do likewise in Stockton. I shall do the same in the Bay counties, and others elsewhere as circumstances control us. In this way we expect to conclude this

GRAPEVINE
CUTTINGS AND ROOTINGS.
THE FINEST FOREIGN VARIETIES FOR WINES, table use, brandy making and raisins from the Yerba Buena Vineyard and Nursery, Santa Clara Co.; MATARO, CABERNET, GRENACHE, CHAUCHE-NOIR, CHARBONO and etc., warranted true to name and are passed through a disinfectant or wash before leaving the place. Fine varieties being scarce and in great demand this season, it is advisable to order early. Apply or address P. O. BURNS, proprietor, box 1195, San Jose, Cal.

off ring in a very short time, and it is for this reason that I seek this method of making our plans known early, so that those intending to subscribe may not lose time in getting ready to do so. When we have accomplished our work, we shall have created a community larger in area than Anaheim, and backed its prosperity by the stock of a company holding 25,000 acres of land for the benefit of the settlers and purchasers. We do not expect to waste any time, knowing that there are enough good people waiting for a chance like this to exhaust our stock very rapidly; then the company will have plenty of land to sell to those who are too late to come in on the original plan.

It should not be forgotten that the site of the old dam used by the Mission fathers for the irrigation of Mission valley is on one part of this property, and that this water right, where an immense storage reservoir may be created with an unfailing water supply, will become of vast value to the company, enabling it to offer ample facilities for the winter irrigation of the mesa lands and the supply of San Diego. Our company intends to demonstrate to those who think that they require water for irrigation what can be done with the powerful Stockton windmills and suitable steam pumps. The chief merit of these lands, as tested during these late dry years, is, however, in the fact that profitable crops may be produced without any irrigation, and that San Diego raisins are superior to any other raisins in the State.

Dr. Jarvis, of San Diego, will give what information may be required, and subscriptions to stock and selections of land may be made at once. Fortunately, the land is so uniform that parties may fearlessly select their tracts without personal examination of the different lots. Yours respectfully,

CHARLES A. WETMORE.

Coates & Tool, proprietors of the Napa Valley Nurseries, have one of the largest stocks of grape vine cuttings and rooted vines in the State. Of the latter, rooted vines, they have 250,000 of the leading varieties, which are perfectly healthy and are free from pests, but any they sell are thoroughly disinfected before shipment, if the purchaser desires this precaution taken. This firm is now making cuttings from the wild Riparias in Judge Stanley's three-year old vineyard, and will have from 150,000 to 250,000. This firm also offers rooted Zinfandel, Frankenaud, Johannisberg Riesling, Chauché Gris (Grey Riesling), Gutedel, Charbono Gamay (Black Riesling), Petit Pinot (Black Burgundy), and Mataro, rooted vines. Also Mataro, Petit Pinot and other varieties of cuttings. Their vines are all raised without irrigation, and the prices are made low for large orders. This firm's advertisement will be found in another column.

Scraps from Hidalgo Tablada's Manual of Olive Culture.

Vegetative life expresses itself in two functions, *nutrition* and *reproduction*.

The olive-tree practically considered shows that its organs of nutrition serve to its multiplication. The branches to which its roots supply life, and which, put in the ground, form new olive trees, are in this case organs of both nutrition and reproduction. Still this means, the only known one for perpetuating the variety of the olive is not its natural botanical means. The seed kernel of the fruit germinates and develops a plant which fructifies and perpetuates the plant specie, but not the variety. It always develops the wild olive called in Spanish, Acebuche. Thus the seed of the fruit should not be used for multiplication of a variety.

Fecundation of the blossoms of the olive-tree proceeds gradually. The pollen, a subtle powder, and the ovary of the flower to be fructified by it, as a rule find favorable circumstances for this act, on the success of which depends the crop; natural and accidental impediments causing abortive effects. Natural causes are: want of fertility in the soil which renders the life of the tree inactive or incomplete; unsheeted flow of sap in the plant, stimulating the ligneous parts of the same to the detriment of the fruit.

A correction of the flow of sap by means of an incision in the shape of a ring around the lower part of branches may insure the successful development of the fruit. The descending sap acts then upon the blossom, as its way back to the wood is thus intercepted.

Accidental causes of setting of the fruit, rains at the time of opening of the blossom, which wash off the pollen; sunshine after rain when the rain-drops in the petals become so many crystals, the foci of which burn the tender parts of the flower.

When the fruit has set, but remains small, isolated ones developing well within, indication is given of the lack of power on the part of the tree to nourish the fruit.

The vegetation and bearing power of an olive tree according to variety, manifest themselves by the soil and its cultivation. If below the active superficies of the soil there is a stratum more fertile, the roots will descend to it—if the contrary is the case they will remain in the superior part. If the soil has not depth, the tree will remain small.

Oxide of iron is present in almost all soils. Where it is very abundant it appears in the soil in red, yellow, greenish and black colors, according to combinations with other metals. Where it is manifested by a red color, it is most favorable for the growth of the olive tree, particularly in cool regions; that color being best apt to absorb luminous rays. The great amount of oxygen in oxides generally stimulates the materials for vegetative life in the soil.

Ferric oxide possesses the faculty of fixing, under the form of ammonure, the ozoal existing in the atmosphere.

Among the mineral alkalis the most important one for vegetation is potash. By its means the sap is kept liquid, iron made soluble and incorporated in the sap. It favors the oxigination of the textures and fluids that come in contact with atmospheric air.

Schistose loam, basalts and feldspar furnish potash in the soil, in the shape of soluble salt, of carbonates, nitrates and chlorhydrates. The emanations from the sea transport to great distances chlorates of potash. Potash-nitrates found by opening with the plow the huge pieces of soil in the fields of Andalusia explain the fertility there when rains concur, soils where by filtration, saltpeter is extracted are very fertile in years when the weather assists.

Lime, in its pure state, is nowhere found, but under the form of carbonates abounds. Few soils lack lime carbonates. The olive tree is one of the plants that accommodate itself best to cretaceous soils, that is where there is more lime-carbonate present than granitic elements. Lime is indispensable to vegetative life. The oil from trees growing in calcareous soil is better than that of those grown in soil containing small proportions of calcareous carbonates. These carbonates stimulate the decomposition of the nutritive elements in the soil. Solubility of nitrates and bi-carbonates is a great motor for the development of plants.

Superabundance of cretaceous and calcareous substances in a soil is hurtful, as a very large amount of moisture is absorbed by them, causing under cold temperature and with repeated frosts a looseness of the ground. This provokes a displacement of the roots, and by dilation may cause ruptures. Cretaceous soils are cold, the white color absorbing sun-rays.

Bonfort's Wine and Spirit Circular exposes the attempt of a syndicate to create an impression that there will be a German cherry juice famine. If there is, it will not affect California; not being engaged in "stretching," "Gallizing" and "Pasteurising" wine, we do not need cherry or elder juice, or any other coloring matter.

Taylor: An unjust accusation is like a barbed arrow, which must be drawn backward with horrible anguish, or else will be your destruction.

"THE WINE PRESS AND THE CELLAR."

A MANUAL FOR THE WINE MAKER AND THE CELLARMAN

A Few Press Notices.

[PACIFIC RURAL PRESS.]

"MR RIXFORD has made a very careful study and comparison of all means and methods described in the many good French works on wine-making, and has prepared a book which is a model of concise statement, very comprehensive in its scope, and still so skillfully condensed that the book is compact and concentrated, which is the secret of success in a manual. Mr. RIXFORD's book will supply a lack which the recent extension of the grape interest has made very great and will do much service in the advancement of the industry in this State."

Letter to the author from E. J. Wickson, Esq., editor of the *Pacific Rural Press* and Secretary of the State Horticultural Society:

"CALIFORNIA STATE HORTICULTURAL SOCIETY, }
Secretary's Office.
SAN FRANCISCO, September 29, 1883.

E. H. RIXFORD, Esq.—*Dear Sir*: I have been much interested in a careful perusal of your manual, "The Wine Press and the Cellar," and am pleased to announce that I find it exceedingly valuable as a source of information on practical wine-making. It seems to me a model of explicit statement and intelligent condensation. Certainly there is nothing in the English language which can be at all compared with it as a guide to the most correct and successful practice with the juice of the grape, from the vat to the bottle. The publication will be of invaluable benefit to the wine interest of the State.

Very truly yours,
E. J. WICKSON, Secretary.

[S. F. DAILY EVENING BULLETIN.]

"The most timely California book of the season. * * * It is safe to say that no work adapted to California wine-making and wine-keeping, which has yet been published is at all approachable to the volume under consideration. The arrangement, classification, and indexing shows a wonderful amount of care. The indexing is so thorough and the classification so perfect, that the person desiring to consult its page is for any particular information desired, pertaining to the special subjects of which it treats, can readily refer to it.

Less Vines to the Acre.

The Los Angeles *Herald* has a good deal to say in favor of planting less vines to the acre than is now the custom. In comparing existing vineyards, it errs in assuming that a better wine can be cultivated much cheaper on half a dozen small vines than on a hundred. The *Herald* says, "There is at present much interest manifested in the question of cultivating the grape-vine. It is a question whether vines should be pruned low and short, or trained on high trellises. It has been asserted that twenty grape vines on an acre, trained high, will yield more than one thousand gallons of wine, while the old fashion of planting and cultivating the vines in a hundred square feet—less than that of the one thousand vines—is the old-time custom.

The matter is one of great seriousness, and it is the part of wisdom to decide which is the best. There is no use in taking care of 1000 vines if the same profit can be secured from twenty vines. This is the day for experiment, and no old theory should be clung to, if experience shows more profit in a different way.

The cultivation of the grape now amounts to millions of dollars, and is increasing in an enormous manner. Our grape growers desire, and to spend ten dollars per acre a year in raising a crop of grapes when the same can be done for five dollars with the same profit.

If the Sultana grape will bear earlier than the Muscat, and more heavily, and dry into raisins in half the time of the Muscat, and ready for market before the rains, it would seem to be a better grape to cultivate in this part of the country. The question of profit is the one to be considered.

If trailing vines pay better than the old style of cultivation, then let us trail. There should be no worship of the past. We should not do things because others did them a century ago, but do them in the way most profitable to the cultivator. The standard of profit is the guide for us to go by, and that standard seems to be yet undetermined. Whether Muscat or Sultana shall furnish the raisins is an undemonstrated proposition, with the elements largely in favor of the Sultana. After that question is settled, then the question as to the best manner of cultivation comes in. This question is already very prominently before the people.

The *Herald* concludes by quoting: Mr. Leonard Coates, whom it very properly designates as a very enlightened viticulturist of Napa county, a communication to the San Francisco MERCHANT.

The communication quoted appeared in this paper Nov. 23rd.

The *Wine and Fruit Grower* (N. Y.), in the article which we reproduced last week in the Merchant, said:

"In reference to the 'Ohio and Virginia wines being put on the market here and handled better than the California wines,' the Missouri asks 'If we are sure that these wines are the pure product of the grape, that is, are not colored? Is not cane sugar largely added to them?' and 'why do the splitters favor Ohio and Virginia wines also?' [illegible] from at a time). We answer: [illegible] in being pure juice, we do [illegible] that the wines are pure juice wines by any means. But the bulk of the dry wines of this class are pure juice, particularly the reds with no additions except cane or grape sugar."

We are glad to have the admission that *all* Ohio and Virginia wines put on the New York market are not "pure juice wines by any means." And, moreover, that even the dry wines, white and red, are mixed with "cane or grape sugar." There is the difference between Ohio and Virginia wines and our California product. Our dry wines, as they leave the cellar of the maker, are, without exception, the pure juice of the grape, and free from any addition of cane sugar, glucose or coloring matter, and we do not believe that there is a single wine maker in Ohio, or Virginia, or New York, who can honestly say that the wine he sends out of his cellar is the pure juice of the grape. Moreover, we believe that the Eastern houses who, as the *Wine and Fruit Grower* says, are "pasteurising" California wines first learned these dishonest practices by having to sweeten and flavor Ohio and other Eastern wines to make them palatable.

Operations at Special Bonded Warehouses of Grape Brandy.

The following statement shows the quantity of grape brandy placed in special bonded warehouses, withdrawn therefrom, and remaining therein at the beginning and close of the fiscal year ended June 30, 1883, in taxable gallons:

	Gal'ns.	Gal'ns.	Gal'ns
Remaining in warehouse July 1, 1882.			
First district of California	220,687		
Fourth " of California	202,985		
		423,672	
Removed for exportation and unaccounted for July 1, 1882.			
First district of California		825	
			424,497
Produced and bonded during the year.			
Produced and warehoused in first district	117,778		
Produced in fourth and warehoused in first district	21,061		
		138,839	
Produced and warehoused in fourth district		85,138	
			223,977
Transferred from fourth district to first district			0,516
			654,990
Exported and accounted for during the year:			
First district of California		1,245	
Fourth district of California		94	
			1,339
Removed tax paid during the year:			
First district of California	119,299		
Fourth " of California	76,754		
		196,053	
Loss by regauge, act of 28, 1880:			
First district of California	5,034		
Fourth " of California	4,306		
		9,340	
Transferred from fourth to first district		6,516	
			211,909
Removed for exportation and unaccounted for June 30, 1883:			
Fourth district of California		163	
Remaining in warehouse June 30, 1883:			
First district of California	241,289		
Fourth " of California	200,290		
		441,579	
			441,842
			654,990

Of the 223,997 gallons of grape brandy bonded during the last fiscal year, 117,778 gallons were produced in the first district, and 106,199 gallons were produced in the fourth district of California.

The total product was 158,848 gallons less than in the previous year, while the amount removed tax paid was 27,429 gallons larger than in 1882. The loss resulting from regauge under the Act of May 28, 1880, was 3,773 gallons more than in the previous year.

Of the quantity in warehouse June 30, 1883, 241,289 gallons were in the following warehouses in the first district of California:

	Gallons
No. 1. Bode & Searle, at San Francisco	154,027
No. 2. Juan Bernard, at Los Angeles	44,082
No. 3. G. C. Carlon, at Stockton	24,375
No. 4 James M. Tiernan, at Saan Gabriel Station	21,105

The last-named special bonded warehouse was established December 20, 1882, and 200,290 gallons were in the following-named warehouses in the fourth district of California:

	Gallons.
No. 1. George Lichthardt, at Sacramento	84,252
No. 2. John F. Boyce, at Santa Rosa	25,179
No. 3. A. B. Parfurst, at Saint Helena	71,619
No. 4. John Tivnen, at Sonoma	19,240

THE TRUE AND THE SPURIOUS.

[From the Wine and Fruit Grower, N. Y.]

Referring to the article headed as above in the October issue, on spurious wines, we asked these questions in the closing paragraph, viz: "Who are they who are working all this evil? what is to be the result if we allow it to flourish and grow? what remedy have we, and shall we rise up and apply it?" We propose in this chapter to answer the above.

We could answer the first of these questions by presenting the names of a score of dealers, and manufacturers too, whom we know, and who excuse their dishonest methods on the ground that "they all do it," and to compete they must "follow the crowd." This mixing, "spiritting," and "strengthening" of wine is confined mostly to the middlemen, who stand between the wine grower proper and the trade. They are those who should handle and market the wines, coming them of any sickness or disease that may have attacked them from transportation or any other cause, and who should use every endeavor to put the wines on the market in the most creditable shape. The small dealer and consumer seldom knows anything regarding the management of wines, and they depend upon the large dealer or agent of the producer to supply them with wine that will "stand up" and not turn blue or sour or cloudy; in short, the reputation of American wines is in the hands of this class of merchants. How far they fall short of meeting the requirements of the status they hold, with regard to these wines, furnishes one of the most painful records of the vicissitudes of a noble, young, and promising industry. With few exceptions, the rules of action are: first, to get the greatest possible number of dollars out of a given number of gallons; and, second, to convert the wines by manipulation and by labels, etc., into foreign wines, so that they go to consumption as imported goods. This is specially true of the best class of American wines.

Here, then, we have the main source of the evil, the focus of the adulteration and falsification. We regret to say, too, that some manufacturers must be classed with the above malodorous list.

WHAT WILL BE THE RESULT.

Now, as to the result upon the future of American vine culture. It seems we scarcely need point out wherein these practices must be permanently injurious, if not utterly disastrous. This industry began in this country nearly forty years ago, and in the ordinary course of the rapid development of all such enterprises in this country, having in them the elements of success, it ought to have developed ere this into one of the leading industrial pursuits of the nation. And yet, what do we see? A few successes in California attaining a modest success, making wines to be sold as imported, and a few scattering vineyards in Ohio and States struggling for a bare existence, and nearly all the products from what we see on "coming to grief" by buyers or sent rotting into the market under the disguise of "pure brand or French labels!"

California is now holding the only substantial people's ear that is being made in this country in vine culture; but we distinctly warn the wine growers that they are building on a treacherous foundation, and unless they can change the methods now employed to put their productions on the market, and put them on their merits, the only solid foundation, they will ere long meet with varyings difficulties and disappointments, and, worse still, they will find themselves at the mercy of a ring of speculators and dealers who will permanently hurt the growth of the industry. It would have been a hundred greater now but for the mistakes they have fastened upon it by these practices we have already detailed,

WHAT IS THE REMEDY.

Those chiefly interested in solving this problem are the grape growers. When we consider their numbers and influence, it would appear that they might exercise some control over their productions and be able to determine upon what conditions they should be put upon the market; and there is no doubt this could be done if there was concert of action, resulting from organization. If the wine growers were fully organized, with sub-organization in each wine making centre, a system might be arranged for marketing their wines that would insure their being properly classified and graded, and put on the market in the best possible condition and in such manner that the public would be able to readily find pure juice wines, and thus afford a standard of comparison between the true and the spurious. In this way true wines would come to be understood by the consumers, and when one able to judge between the two kinds they would not again touch the bogus stuff, not even as a gift.

It is certain that, soon or later, the producers will have to band together to protect their wines from the forbearance practiced upon them by the middle-men and distributing agents. It may be necessary to call in the help of the law, both State and National, and in one individual judgment this last is the easiest way; but it should be resorted to at the outset, and only to correct the abuses complained of, and from sanitary considerations bearing directly upon public health.

Independent of this, such a course hopes we may call them contrivances, as reasonable are other means to hand that could be made auxiliary, such as the encouragement of the district the public, pressed through the press, and by sustaining agencies of people devoted particularly to the end in view. Through the assistance of both the public might be induced to the superior and delicate appreciation of the real, and to condemn as abhorred to detect the spurious and adulterated wines.

As for ourselves, we shall not be led to the pursuit and expose the latest scheme for adulteration and deviltry that has been tried in regard to wine, and to the knaves who is but. When each one of us in this miserable business shall be compelled to test where it is being done, and where the guilty ones. The world shall know that wine by those pigskins to the public is the most powerful medium of spreading death and in the hands of speculators and dealers with convincing effect in the matter of adulteration, and the public will be the jury. And just the more we have to do with the latest will have to be knowledge.

NAPA VALLEY WINE COMPANY.

The Directors of this Company in the St. Helena last Saturday. In the absence of President Krug, Vice-President Schmidt took the chair. The Secretary was ordered to procure and write up the stock book, to. A trade mark was adopted, Bacchus in the center of a cluster of grapes. The resolution ordering an assessment was rescinded, it being determined not to collect any assessment until the first $150,000 of stock was subscribed. The amount of stock subscribed to date is $130,000.

The St. Helena *Star* says Jacob Schramm of Schramsburg, was engaged on Tuesday in crushing a small quantity of Zinfandels, enough to make about fifty hundred gallons of wine, and will be the last man in Napa county to make wine this year.

As an instance of the unsuccessful transportation of cuttings by mail in wood, Martin Kuhl which information that last January he sent a package of cuttings to his brother in Eden, Ohio, and has at last received information that they came through in good condition and are now in bearing. *St. Helena Star.*

The Napa wine yield, according to the annual report of the wine yield in this county for the season of 1883, 63 cells in aggregate 2,300,150 gallons, or 1,150,000 gallons less than the vintage of last year. In quantity of wine made, Amador Co. comes this city, lead the list with 300,000. Kern comes next with 200,500. Glenn county follows with 180,000, next Calaveras with 150,000, followed by Mendocino with 140,000. These five cellars aggregate 930,500 gallons, or over one-third the combined yield of the 63 cellars reported. *St. Helena Star.*

Vine Cuttings.

San Francisco, Dec 4th, 1883

Editor MERCHANT:—I desire to announce to your readers that I have just received a car lord of fresh and fine Riparia cuttings from Nebraska; also a lot of Riparia seeds which will be disposed of on same terms as last year. Those who desire their stocks should apply early.

PRICES—20 INCH CUTTINGS ..$10 PER M.
36 INCH CUTTINGS ..$15 PER M.
12 INCH CUTTINGS ..$18 PER M

RIPARIA SEED—
LESS THAN 5 LBS..... $2 50 PER LB.
ABOVE 5 LBS..... $2 00 PER LB.

I shall also supply V. Cahfornica seed at $1 50 per lb., in lots less than 5 lbs., for 5 lbs. and more $1 00 per lb.

Also I shall be prepared to furnish cuttings of all approved European varieties of grape vines, such as our vineyards may be able to supply.

Chas. A. Wetmore
No. 111 Leidesdorff St.
San Francisco.

THE WINE MARKET.

There have been some sales of cellars and parts of lots, made within the past ten days, but we are unable to give prices. If the prices are to be reported to us in cellars or special lots sell, it is evident that the information must come from the vendors. We can, however, that the figures so far are a little better than for similar grades at this season last year.

The demand for Brandy continues light

PRODUCE MARKET.

The Imports and Exports given below are up to Wednesday evening.

FLOUR—
Imports, 2232 bbls. Exports, 33629 bbls.
Receipts, of week, 32,919 qr sks.
Extras, 5 75 to 6 00; superfine, $4 00@4 75
Family extra, $3 65@4 50. Interior Extra $5 00@5 50 per bbl for jobbing parcels to local consumers, but round lots for export can be obtained for some brands figures

WHEAT—
Imports, 20,543 sks. Exports, 25071 ctls
Receipts for the week, 387,432 ctls
At the close of last week the market was very strong and a very confident feeling was shown on the part of holders of actual grain, and possessors of contracts to dispose of them during the season. During the current week advices from the Eastern and European markets have been of such a nature that holders are more ready sellers, at reduced figures, and would-be buyers are shy in their bidding. Sales on Call on yesterday included 100 lots $1 96, and 400 do $1 95, lower the season. In the sample market $1 80 was the best bid for No. 1 White

BARLEY—
Exports, 6217 ctls
Receipts of week, 367,745 ctls
Stocks on hand in the city warehouses on the first of the month are reported at about 25,000 tons, a much less amount than was expected. The declines of the market have resulted in favor of the buyer, and the general tendency is towards lower figures, but a continuation of dry weather for the rest of the month would, undoubtedly, cause a material enhancement in values. Sales of No. 1 Feed were made on Call yesterday at 1c for spot lots, $1 12 buyer the season, $1 01¼ Seller 1883. In the sample market $1 02½ is the top figure obtainable for No. 1 Feed, Bay brewing, $1 07½@$1 10; Chevalier, $1 30@$1 37½ per ctl.

OATS—
Imports, 1550 sks. Exports, 2209 ctls.
Receipts of week, 12,849 ctls.
Two carloads have recently been received from Nebraska, and if current prices are maintained it is probable that further considerable consignments will be received thence.
We quote: Black, $1 45@1 50; White, $1 40@$1 85 per ctl for Common to Extra Choice.

CORN—
Exports, 1033 ctls.
Receipts, 6649 sks.
California Yellow is quotable at $1 40@1 45; do White, $1 45; Mixed Nebraska, $1 45 per ctl.

BUCKWHEAT—
Receipts of the week, 40 sks.
Market nominally quotable at $1 25@3 37½ ₱ ctl for good.

RYE—
Receipts of the week, 3001 ctls.
Quotations are more or less nominal at $1 10@1 30 per ctl. The market is exceedingly dull.

MILLSTUFFS—
Imports, 600 sks bran. Exports, 4860 ctls bran, 1979 ctls mi lstuffs.
Receipts of the week, 14096 sks Bran, 3319 sks Middlings, 2450 ctls Ground Barley.
We quote: Ground Barley, $23 50@24 per ton. Middlings are selling at $24@22 00 per ton, Wheat Bran, $17 50@18 per ton; Oil Cake Meal $30, Feed Corn Meal, $36@36, Cracked Corn, $36 per ton.

HAY—
Exports, 343 tons.
Receipts of the week, 1262 tns.
We quote: Alfalfa, $7@8 10; Wheat, $13@$15, Stable, $12 00@14 00, Wild Oat, $13@$15; Cow, $8@11; Barley, $10@12 50 per ton.

STRAW—
Receipts of week, 117 tons.
Quotable at 55@65c ₱ bale, as to condition.

SEEDS—
Exports, 10 cs.
Receipts of week, 74 sks mustard, 31 sks alfalfa.
Flax quotable at $2 50@2 75 ₱ ctl; Canary, 5@6 5/8c; Alfalfa, 9½@10c ₱ lb; Timothy, 7@8c for native and 8@9c for imported; Mustard, choice Brown, $3 00@3 25 ₱ ctl, White, $2 75@3 00; Hemp, 4c, Rape, 3@3½.

BEANS—
Exports, 225 bbls 566 ctls
Receipts of the week, 24,300 bags.
Our quotations are, for round lots from the wharf: Small White and Pea, $3 12½; Bayos, $3 40, Pinks, $3 15; Reds 3½, Butters, $3¼, Limas, $3¾.
There is no trade for anything, so the market lags. And while receipts have been quite heavy, consignees are not offering their samples, preferring to wait events in the future. Therefore prices have not suffered much, although there has been a weakening all along the line, the colored varieties holding up better than others.

VEGETABLES—
We quote. Carrots, 30@35c; Turnips, 75c@$1 00, Cauliflower, 60@75c ₱ doz; Cabbage, 60@75c ₱ doz; Garlic, 2@2½c ₱ lb; Celery, 50c ₱ doz; Dried Okra, 25c ₱ lb., Dried Peppers, 12@13c ₱ lb, Tomatoes, 50@75c ₱ box; Artichokes, 40@60c ₱ doz; Lima Beans, 4@5c ₱ lb; Beets, 75c ₱ ctl; Parsnips, $1 25 ₱ ctl; Marrow 1st Squash, $8@10 ₱ ton, Mushrooms, 10@25c ₱ lb.

FRUITS—
Imports, 1279 cs fruit, 87 bxs apples, 34 bxs limes, 2723 bxs oranges. Exports, 422 bxs fruit, 1000 bxs apples.
We quote: Domestic—Strawberries, $8@— ₱ chest; Apples, 50c@$2 00 ₱ box; Pears, 50c@$2 00 ₱ box, Grapes, 50c@$1 50 ₱ box; Cranberries, $14 00 ₱ bbl; Westerm do, $17 00@17 75 ₱ bbl.
Tropical—Lemons, $6 50@7 50 per box for Sicily: Limes, $11 00@13 00 per box for Mexican; Bananas, 12½@13c per lb, Bananas, $1 75@3 00 per bunch; California Oranges, $2 25@2 50; Loretto Oranges, $2 50@25 00 per M.

NUTS—
Imports, 530 bags nuts, 93 bxs 54000 cocoanuts, Exports, 15 bags nuts.
We quote: Cocoanuts, $6@6 50 ₱ 100; California Walnuts, 8@9c ₱ lb; Chili do, 8½@9c; California Almonds, hard shell, *Tuttle*, soft shell, 13@14c, Filberts, 14@15c; Pecan, 12@13c; Peanuts, 5@5½c; Brazil Nuts, 12@13c, Hickory Nuts, 7*@*8c.

HONEY—
We quote: Extracted, 6½@7½c; Ex White Comb 18c; White, 15c, Dark, 12½c.

BEESWAX—
We quote 28@30 c per lb.

DAIRY PRODUCE—
Imports, 1 cs 12 tubs butter, 46 cs cheese. Exports, 15,266 lbs butter, 10022 lbs cheese.
We quote: Point Reyes, 37½@40; Choice, 32½@35; Fancy, 25 to 30; 22½@30; Inferior lots from country stores, 16@17c; firkin, 20@21c for old and 24@27½ for new, Eastern, 15@17c; Pickled Roll, 25@27½; Cheese, California, 16@18c for choice, 11@12½; for Good, Gilroy, in drums, 16@18c; Eastern, 17@18c; Western, 10@15c.

OLEOMARGARINE—
Exports, 233 lbs.
We quote the range from 20 to 22c, according to package

EGGS—
Imports, 40 cs Exports, 90 cs
We quote California Ducks, Chicken Ducks, 37½ to 35c per doz. Eastern, 32½@35c

HOPS—
Imports, 131 bls Exports, 3150 lbs
Receipts of the week, 3246 lbs
The prices in New York are dull, and quotations below what they were two weeks ago. Here the market was weakening, but not to the extent of that lower. The London market is also considerably pronounced as in New York. Business is reported to be absolutely nothing doing, and quotations are purely nominal. The asking price is 25@26c, with 15c offered and no anxiety to accept that figure.

ONIONS—
Imports, 148 Exports, 150 ctls.
Receipts of week, 2048 sks
There are plenty of sprouted and rotten onions, but choice are scarce and sell readily at 2@2½c on the wharf

POULTRY—
We quote. Turkeys, Live Gobblers, 20@22½ per lb, Turkey Hens, 20@22c. Dressed 22@24c; Young Roasters, $1 00@1 75 per doz; Old Roosters, $4 00@5 00, Hens, $6 50@8 00, Broilers, $1 00@2 00 according to size; Ducks, $7 00@9 50 per doz; Geese, $2 00@2 50 per pair.

GAME—
We quote: Quail, 1st $1 25 ; second, Hens, $2 00@2 50; Rabbits, small, 1st $1 25 ; second tail, $1 25@$1 50 ₱ doz; Hares, 1st 00 ; second, $2 00@$2 50; Wallroos, 1st $3 00 ; second, $3 00@3 50 ₱ doz; mallards, $1 00@5 00 per doz; common snipe, 50c@75c per doz; Jacks, $1 25@1 50 ₱ doz; Grey Geese, $2 00@2 50 per doz; White Geese, $1 50@1 75, Honkers, $3 00@4 per doz.

CANNED GOODS, ETC.—

Imports, 2813 cs canned goods, 35 cs milk. Exports, 825 cs canned goods, 150 cs milk.

There is no change in this market. Trade is very dull and will probably continue till spring. Dealers will make no concessions and dealers will not buy with out strong inducements being offered them. So the market is not a perfect standstill.

We quote: California assorted Table fruits, 2½ ₱ cans, $2 65 ₱ doz, do pie fruit, 2½ ₱ cans, $2 00 do; do gallon Table fruits, $9 00 ₱ doz. Pie fruits, $5 00. English Groceries Crosse & Blackwell's Pickles, pts, $4; qts, $6 75; chilies, qts, $7; Lincoln, qts, $9 50. Sauces, $7 00 ₱ case. Jams, $4 00 Jellies, $5 00 ₱ doz. Fry's Chocolate, ½ ₱ lb, Cocoa 15c ₱ lb, Colman's Mustard, 40c ₱ lb.

COAL

Imports, 19000 tons. Exports, 5 tons.

Large arrivals of Coal, both Foreign and Domestic this week must be noted, still the market price is not affected, in fact at once the present advanced figures, dealers show no disposition to press their sales from Ships side as is usually the case, but are allowing the Coal to be taken to yard, anticipating better figures later on. It requires no prophetic attributes to see plainly that our advance is secured in the near future, as with the very light quantity of Foreign Coal now landing, and no indications offering for ships to head this way, at the same time our consumption is increasing, the supply must be rapidly diminishing. It is time that agents here or East Coalmines promises as a very large increase over their present output, and it is safe figuring to materially discount these promises, either as to arrival or delivery.

The cargo of Cumberland per "Worktown" from Baltimore has been almost entirely disposed of from Wharf, M. Sullivan & Co. Advance of the Company, and is of excellent quality.

Importers prices of coal, Foreign and American, to arrive. Australian, $8 00@8 25, Liverpool Steam, $8 00 @ 8 25, West Hartley, $8 25@8 50, Scotch Splint, $7 50@ Cardiff Steam, $7 50@7 75, Lump Lehigh, $12@13, Egg Hard, $11½@12, Cumberland, bulk $10 @ 10. Spot prices are as follows: Australian, $8 50, Liverpool Steam, $8 50, West Hartley, $8 50, Scotch Splint, $9 50, Cardiff, $8 00, Lehigh Lump, nominal; Cumberland, bulk, $11 50, Egg Hard, $11 00.

HARDWARE

Imports, 659 cs. Exports, 189 cs.

IRON—

Imports, 81,900 bdls 665 tons 296 pcs 2 lots iron, 69 bdls 7 10 pcs iron pipe. Exports, 706 pkgs 91 pcs iron pipe, 26 bxs 2408 pkgs steel.

The market for this article is in a demoralized condition, for various reasons, first, an overstock, second, light consumption; third, sellers largely exceed buyers in number. How long this can continue is simply guesswork, it should only continue until present stocks become diminished a little, as all the large shipments en route have already arrived, and will be stored, as per bills of lading holders of these cargoes know that no more can be loaded at Foreign Ports, at all approaching our spot quotations, hence all orders for future delivery have ceased

Importers prices of pig Iron, Foreign and American, to arrive. Shotts No. 1, $27½@—; Glengarnock, $26 00@—; Eglinton, $25 00, Claylane White, $23 50; American, Eastern, Soft, $28 00. Spot prices are as follows: Glengarnock, $25 50, Eglinton, $25 00, Clay Lane, white, $23 50, Shotts No 1, $28 50, American, Soft Eastern, $28 00. Refined Iron—4@4½c ₱ lb.

We quote: PigTin, on spot, 22½c.

WINES—

Imports, 219 cs foreign, 1 csk native. Exports, 32,512 gals native, 80 cs Champagne

For Wine market, see Wine department.

Reciprocity as a Policy.

If our tariff policy is not to be soon changed it would be wise to be reaching out for some trade beyond our borders through reciprocity treaties. We have such a treaty now with the Sandwich Islands which Eastern manufacturers are anxious to abrogate, and yet it has resulted in giving us more trade with the Kingdom of Hawaii than we have with all Spanish America except Cuba and Porto Rico; greater than with the Central American States and British Honduras, Portugal, Austria, Denmark, Turkey, Sweden and Norway, Chili and Peru, and nearly as large as our trade with Mexico and China, including Hongkong. San Francisco is the port at which most of this trade centers. In the East a sentimental demand, with a mercantile squint, is made that we submit to the invasion of Chinese laborers for the sake of the Chinese trade which enters Eastern ports, and in the same breath the abrogation of the Hawaii treaty is called for.—*Oakland Times.*

CORN STATISTICS.

Mr. Talmage, Statistician of the Milwaukee Chamber of Commerce, in his completed data for the corn crop of 1883, makes the footing 1,621,100,000 bushels. His tables show that Missouri and Kansas lead, each with 190,000,000 bushels. Illinois 170,000,000, Iowa 165,000,000, Indiana 100,000,000, follow. The California corn crop is placed at 3,000,000, little Rhode Island has only 300,000 bushels, and New Hampshire and Maine have only 800,000 bushels each, though the latter produces the favorite canned sweet corn. One or two States and some of the Territories produce none, or so little that they are lumped together at 5,000,000 bushels.

PORT OF SAN FRANCISCO.

Exports.

Principal Exports by Sea for the week ending December 5th.

VICTORIA—Per same 1096 cs salmon, $25,690 treasure.

ALASKA Per same 75 cs fish, 4 pcs iron, 5 cs oil, 48 cs salmon, 6 cs miscellaneous, $13,120 treasure

GUAYMAS—Per str Newbern, Nov 30 1273 cs fruit, 1542 bdls hides, 33 bxs limes, 18 bales orchilla, 25 csks oil, 2723 bxs oranges, 7 bdls skins, 524 cs miscellaneous, $137,157 treasure.

LIVERPOOL—Per ship North American, Dec 1—2000 tons coal.

PORTLAND—Per str State of California, Nov 30–21 cs agricultural implements, 60 bxs apples, 600 sks bran, 1 cs cigars, 8 cs dry goods, 1180 bbls flour, 5 bxs fruit, 17 cs hams, 2 cs hardware, 78 bdls hides, 84000 bdls iron, 314 kegs lard, 7 bales leather, 148 liquors, 55 cs oil, 44 sks potatoes, 635 cs salmon, 116 bdls skins, 9 bdls wool, 120 cs miscellaneous, $14,918 treasure

DEPARTURE BAY Per Br str Barnard Castle Nov 29—2000 tons coal.

Freights and Charters.

We have nothing new to report about ships. The bay is crowded and ships are arriving from day to day and the demand is no better. A few have left in ballast, seeking another market, a business which will not lose so much for owners as that offered here. The best price for iron, U. K., is 26s 6d, the lowest yet, and at this price the Nagpore, a medium sized ship, has accepted. Wooden vessels are entirely out of the market, and are all preparing to lay up for better days in the future. Soft wood vessels are offering to take 22s 6d, Cork for U. K., orders, or Liverpool direct, 20s. Nothing like these figures have ever been known in San Francisco until the last week. The loss of the California charterers this season all in consequence of those destructive northers in June, has not been less than $1,500,000.

The charters for the last week have been as follows:

British ship Cadzow Forest, 1068 tons, wheat to Cork, U. K., 38s, Liverpool direct, 37s 6d; rechartered, Schr Mary Chilberg, Hanson, 178 tons, merchandise to Seattle. Schr Leo, 152 tons, merchandise to Mexico. Schooner Emma Claudina, 186 tons, merchandise to Hilo. British ship Poseidon, 1738 tons, wheat to Cork, U. K., 37s 6d; chartered prior to arrival. British ship Aberdair Bay, 1200 tons, wheat to Cork, U. K., 40s, chartered prior to arrival. British ship Garfield, 2280 tons, wheat to Cork, U. K.—owners' account.

On October 22d the Rio cable coffee dispatch announced the stock at 228,000 bags. The Rio *News* says the stock at that date was 390,000 bags, 156,000 being held by speculators.

The coffee cables from Rio only give stocks in first hands. How many hundred thousand bags are held there in second hands is a query that a good many coffee dealers would like to have answered.—*St. Louis Grocer.*

Says the Havre de Grace *Republican:* Some of our packers are agitating the passage by Congress of a bill compelling every maker of canned goods to put his name on the case. This is certainly a commendable endeavor, and we trust will be pushed until such a law is enacted.

The *Standard*, of Victoria B. C. is inclined to go for Mr. Dunsmuir, our San Francisco Coal Duder, who represents Nanaimo in the Colonial Legislature.

A. D. BELL ..... Editor.

FRIDAY ..... DECEMBER 7, 1883

The National Traders' League of England, is making a hard fight against the co-operative leagues of the Civil Service and others. One of the grounds on which they are going to Parliament for relief is that the co-operative stores, being industrial associations, are not taxed for income and profits or in other ways, while private retail merchants are.

The *Volks Zeitung* gives an illustration of the way in which "national industry" is protected in Germany. Everybody knows that the German sugar industry in particular has been encouraged by bounties, and, as we have had occasion to record lately, the last season appears to have been a very profitable one to many of the sugar manufacturing companies, dividends ranging from 30 to 65 per cent. having been declared; indeed, in one or two cases dividends far above even 65 per cent. have been announced.

The *Chronicle* proprietor is not happy. He hopes to receive a large contingent fee should the Hawaiian treaty be abrogated. But his own clients, for whom he has lied so boldly and so persistently for nearly three years—for whom he has sought to injure the community by whose prosperity his paper is supported, have gone back on him. The report of the Commissioners sent by the United States to the Pacific Coast and the Islands convinced them that abrogation was hopeless, because the charges on which they had based their appeal to Congress, were proved unfounded, though one of their number was a Commissioner. They changed front, made a flank march without consulting the *Chronicle* and are now working for a remission of the duties on all foreign sugar. This would be a practical nullification of the Hawaiian treaty and at the same time kill the Mexican reciprocity treaty before its ratification by the Senate, but would profit the *Chronicle* not a cent. The *Chronicle* therefore is wild. It says:

> There has been vague and foolish talk of abolishing the tariff on all sugar. That will not be done; but what should be done, and at the very beginning of the session, is the giving of notice that the misnamed Reciprocity Treaty between this country and the Hawaiian kingdom shall be terminated.

If the New York refiners will promise the *Chronicle* the same payment if the sugar duties are repealed as they have promised for the abrogation of the treaty, that paper will have more to say about the iniquity of the duties on sugar than any journal in America.

Wm. Neilson McCann, in addressing an audience last Friday, said he had always labored for the benefit of California, and instanced his successful exertions, some years ago, to procure from the Colonies of New South Wales and New Zealand, the $150,000 subsidy which led to the establishment of the American & Australian line by the Pacific Mail S. S. Co. He is only one out of eighty pretenders who each have made claim to reward for obtaining by their sole individual efforts this subsidy. Neilson McCann had no more to do with it than Black Bart. He is known in the Colonies, and to be known is to be despised.

He is no more entitled to the credit of getting that subsidy commenced or renewed than Consul Kahlke is to the credit of getting the United States duties on foreign wool reduced. The truth is that, while in some respects Mr. Kahlke is a more respectable man than Neilson McCann, they are both pretenders, who claim to have achieved enterprises with which they had nothing to do, and are always seeking newspaper notoriety for personal ends.

Arthur on the Treaty.

President Arthur's Message to Congress is a plain, straightforward, business-like document. It it does not glitter with rhetorical flourishes, it contains a great deal of common sense. But why does Mr. Arthur write, "I am convinced that the charges of abuse and frauds under that treaty have been exaggerated." Exaggerated! How can statements that were absolutely false and have been so unanimously declared after a searching examination conducted on this coast and in Hawaii by a commission of which one member was an avowed enemy of the treaty, be properly characterized as exaggerated? If the charges were without foundation, they were false; if they were only "exaggerated," then there was a foundation of truth in them. But the commission reported that they found no foundation for these charges. Where, then, did the President get his grounds for saying that the accusations of Belmont and others were exaggerated?

Again, how can the President repeat his recommendation of last year, that the treaty be modified wherever its provisions have proven unfavorable to legitimate trade between the two countries? A year ago there were accusations on one side and denials of their truth on the other. The complaints have been heard by a competent tribunal and the verdict is against the plaintiffs, why, then, speak as if the matter were in doubt? What does he mean by provisions unfavorable to legitimate trade? What more can the Hawaiian people be expected to do than take the value of nearly all the merchandise they sell us in our products and merchandise? They cannot buy and pay for more than they sell, and we take all their surplus products. In the paragraph on equitable retaliation he speaks out plainly enough in recommendation of treaties like that in force with Hawaii and proposed with Mexico; but when speaking directly he, perhaps unintentionally, seems to dodge the main question and pander to the jealousy of his old friends, the New York sugar refiners. There is no longer a shadow of honest opinion that the Hawaiians have not complied with the letter and spirit of the treaty, and the question is now narrowed down to one issue: Is the policy of reciprocity treaties a good one or a bad one? The President of the United States, if he offers any opinion, should be on one side or the other. He should not be found on both in the same Message.

The St. Louis *Grocer* has concluded that the sugar producing capacity of the Hawaiian Islands has about reached its limit.

That the San Bernardino *Times* says that county can support 100,000 more people, and wants them quick.

That Nielson praises the *Daily Report* and the *Daily Report* backs up Nielson. Does not Banker remember that "Evil communications corrupt good manners?"

That we do not care a cent what sort of a woman the Speaker's wife is, and yet it seems, the gifts, personal and acquired, were factors in the fight for office.

That a wise man would rather pay one dollar to hear Matthew Arnold lecture than ten cents to see Romany Rye with the most realistic scenery ever put on the stage.

That hoodlumism breaking out in families, however small the husband's earnings, is a moral disgrace—children grow up as their parents train them.

That parents who desire to raise citizens of either sex who will be a credit to their country, must give constant care to their children, more care than is necessary in older countries and colder climates.

That if the condition of the streets, business and residence, is a sign of the progressive spirit of the inhabitants and material prosperity of a town, San Francisco is not in the front rank of American cities.

That the failure of some of the oil wells of Pennsylvania, and the improving yield and new discoveries of oil lands on this coast, are likely to lead to something like a boom in Ventura and Los Angeles counties.

That quality of circulation is as important, or more so, than quantity. Instance: what profit would there be in advertising vine cuttings, wine machinery and grape stakes in a paper that has 100,000 circulation and all among servant girls.

That though there is a very much larger fleet of deep sea sailing vessels at the present time in this bay, it must not be overlooked that there are 60,000 tons less on the way than at the same period of 1882, and 130,000 tons less than on December 5, 1881.

That the *Chronicle* thinks the President was imposed upon when he said the charges of abuse and fraud in carrying out the provisions of the Hawaiian treaty were exaggerated. We think so, too, because the special Commission reported that the charges had no foundation in fact.

That the Fresno Colonies will come to the front rank as raisin producers, and some of this increase will be due to a lady, Miss Austin. Her fruit is not only remarkably fine and carefully dried, but is packed with neatness and more than ordinary tasteful display.

That the Australian Colony of Victoria raised in 1876–7 from 225,[illegible] acres, 127,136 pounds of hops, and in 1882–3, from 1,034 acres, 1,033,536 pounds. Australia will, in time, be a formidable rival to California and Washington Territory in those years when we have a large surplus for export.

That columns of itemized iniquities in all parts of the world are what the dailies of San Francisco publish to the world, and by the fullness of which they hope to gain circulation. If the dailies of America were all suppressed to-morrow, morality would be the gainer.

That possibly the Democrats, in proposing to reduce the sugar duties, believe they can elect a President without Louisiana, but it is more than probable that they do not expect to carry the measure, and then they can pose before the country as the friends of the people and palm off some excuse on the Louisiana planters.

That what President Arthur calls "equitable retaliation" against countries who discriminate against United States productions, and impose onerous restrictions and vexatious and costly penalties for trivial infractions of complicated regulations for merchandise and vessels entering their ports, ought to be enacted. Turkey, Cuba, Mexico, and other Spanish speaking American governments, ought to be taught a lesson in equitable trading.

That Pixley's idea of a society paper is the oddest of all odd ideas. His society columns, his cookery advice, his crack brained stories are all intended for ladies' reading, and was his article on John Swinton's newspaper intended for ladies' reading? We have always paid tribute to Pixley's talent as a writer, but he needs an editor with power to alter and erase passages in his manuscript, or drop them into the waste basket.

That they say the scoundrel who was hung at San Jose last week was strangled to death; perhaps so, but we do not believe he consciously suffered many seconds. By all accounts, his later sensations, if anything, would be rather pleasurable; but whether he suffered or not, we have no sympathy with a man who set out to torture an unoffending old man to make him give up his money to thieves, and with the intention of murdering him in any event. He did not deserve a painless death, nor do any of the three, but he probably had one.

That the value of agricultural exports during the year ending June 30 was $679,269,449, and of manufactured products $111,890,001, against $103,132,481 the preceding year, being larger than during any previous year. There is no value in the argument that free trade is necessary to increase our exports of manufactured merchandise, when under the present tariff system they are increasing at the rate of more than 8 per cent per annum. We are doing better in exports in proportion to capital invested in such manufactures than Great Britain.

The President does not favor either buying or building a telegraphic system, and we may expect him to veto either Senator Edmund's or Congressman Sumner's postal telegraph bills, if either should pass. His reason that it would increase the number of Government employees, would apply to the Government monopoly of carrying the mails. If the pruning shears were applied to the Internal revenue taxes, we could have postal telegraph service without too serious an increase of the number of voters drawing pay by favor of the administration.

BUSINESS CHANGES.—W. W. Montague & Co. are busily engaged in moving their stock of stoves, ranges, kitchenware, mantels, tiles, iron, copper, etc, pipes and pipe-cutting machinery, tin and tin-working machinery, to their new and larger premises the O'Brien Block, Market street.

M. P. Kohlberg & Co., cigars and tobacco, are moving to 526 Washington street.

Michalitschke Bros., cigar importers and manufacturers, contemplate giving up their store corner of Front and California streets.

RETAILERS' CORNER.

The present month is the dullest month of the year, all dealers both large and small making their purchases as light as possible in order not to carry a heavy stock at the annual stock taking. Of course the demand for holiday goods is brisk, but this is a very small trade and none our jobbers would care on depending on that alone for their trade.

SUGAR.

The local demand for sugar has been good during the week notwithstanding the general dullness. The New York demand however is very moderate and prices are a shade weaker than last week. The arrivals from the Islands are light at present and we do not expect large shipments till after the first of the year.

COFFEE.

The local Coffee market does not advance notwithstanding the small stock we have to last us till the first of the new crop arrives which will be about the last of January or the first of February. The reason of this is that the demand during this month will be very light and we cannot expect any more large sales till after the first of the year. During the month of January we expect to see some lively times in the coffee market, and the new crop will arrive on a bare market and the first of it at least realise high prices.

RICE.

The quotations for this staple have been unchanged during the week, with a light demand. Asiatic Rice cannot be laid down at the present low selling rates, as freights to this port are advancing. As soon as present stocks become reduced we may expect an advance, and even before, if a brisk demand arises.

CANNED GOODS.

There is nothing at all doing in Canned Goods. Stocks are very much reduced and jobbers and Eastern buyers will not purchase except large concessions are made which packers refuse to give. The present stocks will be carried with very small sales till the opening of the Spring trade.

SALMON.

There have been some large sales of Salmon during the week which have largely reduced the stock of Columbia River Salmon. The Sacramento River Salmon is about all placed and the stock of outside rivers is so small that by the time the spring catch opens the stock will be entirely exhausted. There is every indication that the packing season of 1884 will open with a very small stock of all kinds, and that prices will be high at the opening.

DRIED FRUITS.

The only demand at present is for holiday goods, which are much sought for. The staples, however, are neglected, and Peaches and Apples, in particular, are perfectly dead.

PERSONAL.—Since our last, Mrs. Loring Pickering, the wife of the chief proprietor of the *Bulletin* and *Call* has paid nature's debt. This sad event was quite unexpected by her husband or many friends; every one who knew the lady speaks of her in words of kindness and affection. The twice bereaved husband has our hearty sympathy.

The flag of the Produce Exchange was at half mast Wednesday and Thursday for J. D. Dubois, of the firm of Dubois & King, of Battery street, a member of the Exchange and a heavy dealer in oats.

THE SEAL ROCK TOBACCO CO.

The *U. S. Tobacco Journal*, N. Y., of November 24th, publishes the account of the suit of Mr. Jones against Jos. Brandenstein, of this city, arising out of the failure of the Seal Rock Tobacco Company, substantially as it appeared in the MERCHANT and comments thus:

From reliable authorities in this city, it is learned that Mr. Wieber Jones went to California with a capital of $20,000, with the announced purpose of starting a plug tobacco manufactory. He had been a partner in the tobacco manufacturing firm of A. G. Fuller & Co., of Danville, Va., but was not a practical manufacturer himself. He had acted for his firm in the capacity of a salesman. Aided by Mr. Joseph Brandenstein, a wealthy San Francisco, Mr. Jones succeeded in establishing the Seal Rock Tobacco Company. Mr. Brandenstein's backing of the company, it is said, amounted to $100,000. The company failed. Mr. Jones came East, and purchased vast quantities of machinery. Many of the trade, hereabouts, were greatly surprised at the time by the extent of Mr. Jones' purchases. They say the plant was large enough to stock a factory of enormous proportions, and the output from such an equipped factory ought to supply the whole tobacco-chewing world. Mr. Jones' manner was confident, and his spirit so highly enthusiastic, that his friends found it unbecoming and inconvenient to counsel him to be either moderate or prudent in his purchases. The plant arrived in San Francisco, was set up, and the factory commenced business. Its products, while voluminous in quantity, did not, it is said, seem to "take" with the public in quality. Most of the goods manufactured by the Seal Rock Tobacco Company was Navy tobacco. Despite the fact that that kind of plug tobacco is the most popular and salable on the Pacific coast, the Seal Rock Company saw its brands pushed aside, and preference given to Eastern brands.

About this time Esberg, Bachman & Co. had bought the J. B. Pace concern at Richmond, Va., and formed the J. B. Pace Tobacco Company. The stock of the company was considered a good investment, and Bratal just in bought some of the shares. Although the transaction was an ordinary investment of money, Mr. Wieber Jones, apparently conceived the idea that Mr. Brandenstein was backing a rival concern in the shape of the Seal Rock Company. In his bill of complaint it constitutes what he calls a fraudulent conspiracy. Mr. Jones also complains that Harry Heyneman, of San Francisco, did not push his goods but gave the preference of sale to Eastern products, though it does not appear that Heyneman had any special reason to push the sale of the Seal Rock Company's products.

A gentleman, recently from San Francisco, told a reporter of the *U. S. Tobacco Journal* that in his opinion Mr. Jones had no case. "In point of fact," said he, "Jones is bitterly disappointed at the non-success of his company, and he is quite willing to attribute the cause to any source but himself. The trouble really lies in the fact that Jones did not know how to successfully run a tobacco factory. He was enthusiastic and coming-on, but something more is needed than these qualities. If anybody ought to complain it is Brandenstein. He lost five times as much as Jones, but he is able to bear the loss, whereas Jones sunk all his capital, is there by angry with everybody in general and is now seeking revenge through the courts."

It is true that Mr. Jones when he went East to purchase the machinery and other material for this enterprise, bought machinery with capacity for making all the "navy" that this coast could consume if every other tobacco manufacturer withdrew from the coast. His sanguine nature led him to purchase as liberally even of such articles as liquorice and olive oil enough to last a large consumer five years. His enthusiasm carried him away and he fairly lost his head and consequently his own and his friend's money. He complains of Mr. Brandenstein because that gentleman purchased stock of the J. B. Pace Tobacco Co., of Virginia and oddly enough of Mr. Heyneman Lorillard's agent, who had nothing to do with him or his tobacco company and could not have helped him without a breach of faith toward Lorillard. We are sorry for Mr. Jones' losses, but his own rashness was the main cause and thank him badly advised in bringing these suits. The application for the appointment of a receiver is set for hearing to-day.

Distilled Spirits in the United States, October 1, 1883.

The quantity of distilled spirits in the United States, except what may be in customs bonded warehouses, on the first day of October, 1883, was nearly one hundred and sixteen million gallons, this quantity being distributed as follows.

	Gallons.
In distillery and special bonded warehouses	73,817,103
In hands of wholesale liquor dealers	13,921,182
In hands of retail liquor dealers	28,180,950
Total	115,919,235

In making the above computation, the average stock of each retail liquor dealer in the United States is estimated at one hundred and fifty gallons.

Trade Failures.

There were 228 failures in the United States reported to *Bradstreet's* during the week ending Nov. 24th, 23 more than the preceding week, 57 more than the corresponding week of 1882 and 113 more than the same week of 1881. Compared with the preceding week the middle states have 55, an increase of 4, New England states 24, a decrease of 1, Southern states 46, an increase of 10, western states 80, a increase of 16, Pacific states and territories 23, a decrease of 3; Canada and the Provinces 21, an increase of 6. Among the principal firms reported embarrassed are L. M. Michels & Co., wholesale fancy goods, of New York, and Michels, Endlander & Co., of San Francisco; Hoffstatt Brothers, importers of laces, neckties and laces, M. Benlein & Co., wholesale grocery, George M. D. Isbell & Co., commission canned goods, and La Dow & Lomax, wholesale hats, New York; The National Bank of Rahway, N. J.; The Mississippa Valley Bank of Yicksburg, and The J. J. Power Oil Company and John F. Hulpp & Co., of Yicksburg; H. G. Billings, lumber, and C. L. Eipex & Co., malsters, Chicago. John Sharples' Sons & Co., lumber, Quebec. In the principal trades they were as follows: General traders 46; grocers 24; clothing 13; liquors 12; shoes 12; manufacturers 12, hardware, etc., 10; fancy goods 9; dry goods 8, furniture 7, tobacco and cigars 6, lumber 6, drugs 6; hats 6, harnesses, hotels and restaurants 4, jewelry 4, millinery 3, produce and provisions 3, bakers and confectioners 3, carriages 2, leather 2, commission 2, grain and flour 2, banks 2

TOBACCO MARKETS.

SAN FRANCISCO.—There is a fair demand for this period of the year.

Cigar manufacturers are apparently doing well. On Monday last stamps were purchased for close on one million cigars. This will consequently help the December returns.

In leaf there has been a brisk demand both for Sumatra and for 1882 Pennsylvania. The market is about cleared out of 1881 Domestic. There is now a good stock of Havana, both fillers and wrappers, and, with what is on the way, we shall have enough to supply all demands for twelve months to come.

Esberg, Bachman & Co., of this city and New York, have this week opened a branch house in Portland, Oregon, and have associated with themselves as partner, Philip Wasserman, the well known and popular merchant of Portland. The completion of the North ern Pacific railroad gives Portland wholesale houses equal facilities with those of San Francisco, and as the first named firm has always had a large share of the Oregon business, they have wisely determined on this step. Esberg, Bachman & Co. carry now in this city the largest stock of manufactured tobacco held by any dealer in the United States, and their connection with 28 manufacturers in the United States are so close and their purchases so large that they are enabled to sell goods on unusually favorable terms. In selecting Mr. Wasserman as the managing partner at Portland, they have chosen the best man in the field and one who has already an established connection with every responsible tobacco buyer visiting Portland.

Geo. Griswald, the new general agent for P. Lorillard & Co., has established himself in the office on Front street hitherto occupied by Mr H Heyneman

Mr Heyneman continues the agency of Stratton & Storm the great cigar manufacturers of New York.

The Internal Revenue Department 1st District of California, reports sales of stamps for month of November as follows:

Cigars	$46 171 28
Cigarettes	199 66
Tobacco	4 158 83

The above shows a very satisfactory business for cigar makers. Third of the cigar manufacturers is not encouraging.

[U. S. Tobacco Journal.]

NEW YORK, Nov 24th.—Again it was very dull in our market, and about the only business visible in all quarters was Government speculation, due to no explainable reasons, does not invite speculation, and the new crops to considered either so high in price or so poor in quality as to leave a trustworthy risk to the investors.

The question: What shall we do is heard on all sides. Buy old? There is nothing that leaves a profit. Buy new? Which? The '83 Pennsylvania has had hands, they may not, the Ohio, whatever both good there is in it, has been bought, the Wisconsin is too high in price when compared with the danger a company incurs operating. The New York crop started off at absolutely frightful figures, the Connecticut, excepting Housatonic and Hockanum, is of a not at all doubtful quality, and an investment in it is shrouded extra hazardous. Well, then, what is to be done? This is what is puzzling the market and drives the majority of the trade both sources and dejected.

There will be as much leaf old tobacco within a short time, and if this new tobacco should come down in price they will be sold in less time than any crops have heretofore been sold. If they do not come down, then it will become a question of courage on the part of buyers. The inventory to-day is as heavy this year. It always is when the previous crop has yielded of some profit.

The sales of the week were 1,200 cases, divided among nearly all grades last week's prices.

Sumatra and Havana were moderately active.

New York Tobacco Leaf.]

NEW YORK, Nov 24th.—*Virginia Leaf*—This market for the past week has been quiet, no wrappers or cutters worth mentioning coming to hand. A few hogsheads or export leaf at from 20 to 30c comprised the sales, so far as reported. A large stock of bright wrappers are here, but prices do not seem to cave up any. There is a tendency among shippers to advance prices rather than diminish them.

Western Leaf.—The inquiry for Western leaf has not yet assumed any active form. The sales effected during the week amount to about from 7 to 10 cases, and included all classes of leaf buyers, exporters taking the largest part on of the goods purchased.

Spirit of the New York Markets.

NEW YORK, Nov 28th.—Unfavorable weather and the intervening of a holiday have served to restrict business trade in the main, and not most pressing wants are distributive. The movement of buyers is manifested by the decreased exchanges at the Clearing Houses of the country and the effects of depression on the interests of manufacturers in the West and South. The gross bank clearings of this city the past week show a decrease compared with the corresponding week last year of 12 per cent. There was also a decrease at most of the other leading trade centres of the country. Production continues to be cut down in the manufacturing sections, and the clearings at these points very generally show a falling off. The immediate outlook is for the renewal of no marriage, but the continuation of the present conservative methods until a long posture commences and industry to move along like their normal condition. On the whole, it is felt there is nothing on which to base positive reasons which is likely to further depress the business situation, and while the course of trade may not be up to the expectations of manufacturers and business men, there is certainly nothing demoralizing. The process of entailment is one that has always preceded the best business years. There has been a sharp reduction in Wheat, Corn and Hog products, in sympathy with higher prices in the primary markets. Cotton, Wool, Petroleum, Tobacco and Hops are quiet and steady. Indian Rubber is dull and the market weak. Spirits Turpentine is a shade lower, Rosin steady, and both dull. Choice Rather continues firm, but the low grades are very dull, as is also Cheese. Eggs and Butter are quiet and generally steady, if we except the continued advancing tendency of China and Egyptian goods, owing to the disturbed condition of affairs in these countries. Grain freights are dull, and except for barrel Rotterdam ships, which are scarce, the market lacks strength. Raw Sugar is dull and nominal. Refined in moderate demand at about steady prices. Molasses is in good demand. Coffee is quiet, with an easier tendency. Tea is quiet and steady. Rice is in moderate request. Spices are dull. Pig Iron is quiet and steady. Tin is lower. Copper and Lead are dull and nominal. *N. Y. Shipping List.*

JOBBERS' PRICES.

National Ship Building on Our Coast.

The Naval Advisory Board in its report says:

"Owing to the complete isolation of the Pacific coast from that of the eastern side of the United States, it is evident that for complete and efficient working the fleet must be separated into two district divisions, and facilities for construction, maintenance and repair in the Pacific should be sufficient to render vessels operating on that coast and in Asiatic waters quite independent of Eastern yards, in order that ship and engine building may be cultivated on this coast, and that sufficient inducements may be held out to people to establish factories—it is strongly recommended that if possible, the vessel of the Dolphin type and one of the gunboats recommended should be built and fitted out on that side."

This is more than an excellent recommendation. It is a suggestion which should be carried out. Ship building is on the increase on our Pacific coast, and there is no reason why vessels of the class of the Dolphin cannot be built here. The main objection that can be urged is the extravagance and waste which has prevailed at Mare Island. But we can urge in mitigation that the California yard has not been worse than on the Atlantic coast. We have also private firms which are competent to build such vessels as the United States needs in the Pacific waters.

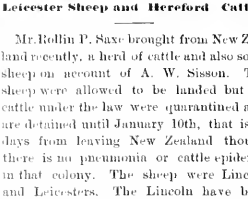
Hops of choice quality are in good demand, and the bulk of the growths are now out of the growers' hands. There is a more general enquiry for all descriptions of hops, and prices are hardening all round. The Continental markets are excited, with considerable rise in prices. American hops are in great favor, and are fetching increased rates.—*London Grocers Gazette*, Nov. 17th.

A Good Mechanical Paper.

We are in receipt of the *Mechanical News* for December 1st, and are pleased to say that it is one of the best illustrated papers that comes to our editorial table. It is a handsome sixteen-page journal, with fine original engravings, and well worth the subscription price asked for it. On the first page of the number before us are several life-like pictures, representing the growing of grapes and their manufacture into wine, as carried on in central New York; these pictures are only one of a series that have been given during the past year of the Industrial Manufactures of the Country, and which are to be continued the coming year. Such enterprise shows that the publishers of the *News* are alive to the wants of their readers.

Those of our readers who want a first-class practical mechanical paper, can hardly do better than subscribe for the same. Sample copies are furnished by the publishers, Messrs. James Leffel & Co., No. 110 Liberty Street, New York, on application. Their subscription terms are one-dollar per year. They offer good inducements for those who get up clubs.

First greengrocer—Any mean people on your route? Second grocer—I should say so; the meanest set I ever run across. Why, three out of five families keep scales.



Leicester Sheep and Hereford Cattle.

Mr. Rollin P. Saxe brought from New Zealand recently, a herd of cattle and also some sheep on account of A. W. Sisson. The sheep were allowed to be landed but the cattle under the law were quarantined and are detained until January 10th, that is 90 days from leaving New Zealand though there is no pneumonia or cattle epidemic in that colony. The sheep were Lincoln and Leicesters. The Lincoln have been sold but the Leicester are still on view at the stables 524 Third street where the Hereford bulls are quarantined. There are 10 Leicesters, 8 ewes and 2 rams, the latter being of different blood from the ewes. These sheep, Proggets, are from the flocks of Every Mailean Esq., of New Zealand and are derived, from imported stock bred by Hutchinson of Catterick, Col. Inge and Barton of Barton, Yorkshire. They are now carrying a nine months fleece with a fine combing wool staple measuring twelve inches. They will yield a twelvemonth clip of 10 to 13 pounds each. For mutton purposes they will make, with care, at twelve to fifteen months old, 80 to 85 pounds of sweet, juicy mutton.

There are twenty Hereford bulls, ranging from 9 to 26 months old, and 18 heifers from 23 to 30 months old, all in calf. The sires and dams of the entire herd were imported and are of the choicest English stock. The Herefords are the best beef cattle in Great Britain, and from their tractability and great strength are largely used, both there and in the Colonies, for work cattle. Both the sheep and cattle are well worth inspection, and the Leicester, as we have said before, would be a profitable strain for sheep owners who are in the vicinity of a market for mutton. Long combing wools are always in demand, and a mutton chop from a well-fed Leicester is a dinner for an epicure.

SHORT STAPLE.

L. J. Knowles & Bro. an Eastern firm, have just made a loom that will weave goods 216 inches, or six yards wide.

Sheep will degenerate more from poverty of blood resulting from bad feeding in one generation than they can be improved in two or three.

An old Texas sheep man says: There is no money in four-pound sheep and seventeen-cent wool. With land getting higher and wool 15 to 18 cents, the low grade must go.

California is an empire of itself. She has a territory larger than two-thirds of the kingdoms which are ruled by crowned

heads across the sea, and her resources are greater. California lacks only in population and the development of her ample resources. Her chief want at present is manufactures. We have agriculture as the foundation upon which to build our commercial and industrial superstructure; we need manufactures to help upbuild, to round out, to make symmetrical the great edifice that is to denote our future material greatness. It is the solidity of its industries that promotes the prosperity of a State in the largest degree. As it is, California makes no mean showing in respect to her manufactures, but what she is to-day in this regard she is destined to eclipse before many years.—*Riverside Reveille.*

Nos. 129 and 131 Fremont Street, San Francisco, Cal.

CALIFORNIA Piano Manufacturing Co.

INCORPORATED UNDER THE LAWS OF CALIFORNIA, MARCH 8, 1882.

Manufacturers of Strictly First Class

UPRIGHT PIANOS.

Factory, 431 and 433 Fourth St., corner of Bryant. Old Kimball Carriage Factory.

Salesroom, 30 New Montgomery St., under Palace Hotel.

Our instruments possess the very latest improvements, and in TONE, TOUCH and DURABILITY are absolutely without a superior.

EVERY PIANO IS FULLY WARRANTED FOR 5 YEARS.

Our factory is the most complete on the Pacific Coast, possesses every kind of machinery, steam, dry houses, etc., in fact is as complete in all its appointments as any Eastern establishment, prodncing Pianos of uniform excellence and durability. An examination of our Piano-Fortes is earnestly solicited. Catalogues and full description mailed on application.

VOL. XI, NO. 10. SAN FRANCISCO, DECEMBER 14, 1883. PRICE TEN CENTS.

SOME INTERNAL REVENUE SUGGESTIONS.

It has not often occurred to any nation to have a revenue largely in excess of its needs nor has it occurred in any nation we believe that so large a proportion of the taxpayers should object to the reduction of taxes. The manufacturing community in all its branches, employers and employed, oppose any reduction of the tariff which would affect them. The wine growers, the wool growers, the fruit growers, the sugar cane, sorghum and beet planters all object to a reduction of the custom duties on foreign sugar. The large manufacturers, of tobacco are not anxious for a reduction of the Internal Revenue tax they pay, nor are many of the cigar manufacturers, whatever consumers may wish. The distillers and wholesale dealers in whiskey are opposed to any reduction in the tax. Still it is desirable that the National Revenue should be cut down, and the question is how to reduce it without disturbing the business of the country. It seems to us that something may be done that will not be objectionable to any, and we suggest, first, that distilled spirits be allowed to remain five years in bond instead of three; this would postpone the payment of the tax and have an effect on the revenue receipts for the next two years similar to that of a reduction. The entire distilling interest of the country has joined in pressing upon Congress a bill allowing the whiskey on which the tax falls due within the next twelve months to remain in bond two years longer. Why should such a favor be refused? The nation does not need the money, and to enforce its payment will ruin a great many distillers, cripple some small banks, in the distilling states, which have loaned on this class of securities, and be injurious to all those wholesale dealers in every part of the country who have stocks of duty paid whiskey on hand, by flooding the market, with spirits sold at ruinous prices regardless of cost. We should suppose the temperance societies would favor this measure, because an excessive stock of whiskey selling at abnormal prices would tend to promote drunkenness. We would go further, we would make the permanent limit of time in which spirits might remain in bond not less than five years; that is we would amend the law and where it now reads "three years" make it "five years," not merely as a temporary measure for this year only but as long as the tax is maintained. Our State Viticultural Commission has made a proposal which goes deeper, namely, that a reduction be made in the tax for every year such spirits remain in bond. This is in the direct interest of morality, because it is new spirits, not old and fully ripened liquors, that are injurious to health and provocative of crime. Again, we would go further and forbid the withdrawal of any spirits intended for human consumption until they had been at least three years in bond. Such a regulation would make an end of the business of compounding and dealing in the class of liquors known vulgarly as "rotgut." Further, as one-half of the spirits distilled in the United States are used in the arts and manufactures, we would abolish the tax on all spirits so used. In Great Britain, we believe, the tax is remitted on spirits so used, and these are called methylated spirits, being so blended as to make them nauseous. Relieving the spirits used in making varnishes, etc., from duty, we should at once get rid of half the revenue, without making potable spirits any cheaper. We cannot see why reasonable men, who advocate temperance on principle, should not give their aid in promoting measures such as these:

First—To prolong the time in which spirits for human consumption may remain in bond.

Second—To forbid the withdrawal from bond, for consumption in the United States, of any spirits until three years after the date of the original gauge.

Third—To make a reduction in the tax of five or ten per cent. for every year such spirits remain in bond after five years and up to ten.

Fourth—To remit the tax on all spirits used in the arts and manufactures.

This would reduce the revenues of the Government from spirits, without making spirits for drinking cheaper, except such as by age had lost all their injurious properties; and would be a great boon to manufacturers in many branches of business who use large quantities of alcohol.

PERSONAL.—W. G. Irwin, Esq., of the firm of W. G. Irwin & Co., sugar factors and agents of the Oceanic Steamship Company, Honolulu, arrived in this city by Oceanic steamship, Alameda, and will return to the Hawiian Islands in January.

The annual revenue of the San Francisco Postoffice has increased since 1860 from $154,872 to $558,133, and this enormous business is carried on in a dark, inconvenient and crowded building, utterly inadequate and unfit for postal uses. Our Congressmen ought to get a handsome appropriation for a new Postoffice. By a new Postoffice we mean a new building, not some existing building designed for other uses, remodelled. A building for a Postoffice should, from the foundation up, be adapted exactly for Postoffice use, and for no other. Moreover, the clerical staff and the number of carriers should be enlarged. When a China mail, an Australian mail and a Panama mail all arrive and depart about the same time, as sometimes happens, the crush of business, in addition to the regular Eastern and local mail business, makes vexatious delays unavoidable.

Our Custom House quarters are but little better than those of our Postoffice, and as soon as new the building for the Postoffice is ready for occupation, a handsome and convenient Custom House, with accommodations sufficient for this port, when our business is four times what it is to-day, should be at once erected on the old site.

Congress should begin by appropriating not less than half a million for the purchase of a good site on Kearny, or Montgomery, or Market street, and the commencement of work on foundations, etc. The Treasury has drawn millions from the people of California, and now out of its immense surplus revenue we have a right to ask that a small percentage of what we have contributed be spent on such Government works as the growth of our population and commerce demands.

One of the many crimes against society that Messrs. Spreckels and his sons, in the estimation of the *Chronicle*, have committed is building in an American shipyard two magnificent iron steamers for the Hawaiian trade. Every one interested in Island traffic wanted better and more frequent mail and transportation facilities, and now the steamers are running, the Oceanic Company is competing with the sailing vessels for the merchandise traffic. This, in the eyes of the *Chronicle*, is an unparalleled outrage. It was equally an outrage, we suppose, for the Central Pacific Railroad to compel the withdrawal of the coaches of the California and Overland stage companies. What next?

GUAVA JELLY.

The delicious fruit, the guava, is found to succeed admirably at San Diego. A few bushes in a garden are sufficient to supply a family. Specimens of the jelly have been sent by the editor of the San Diego *Sun* to Mr. C. A. Wetmore, of this city, for the purpose of having its commercial value tested. It is believed that a profit of $500 per acre may be made with this fruit. An invitation to leading grocers and canners will soon be issued to test the quality and value of the product.

The new artists on the *Wasp* are becoming more accustomed to their surroundings, and are therefore handling their weapons more skilfully. They have made several centre shots during the past three weeks.

KNIFE & FORK

BAKING POWDER

Perfectly Pure.

Every can contains a Silver plated Knife or Fork. No preparation in the market to-day makes such wholesome muffins, light bread, etc.

Sold only in cans.

Special Inducement.

As a mark of [illegible] to our Viticultural Friends [illegible] the general viticultural interest [illegible] must which is their recognized [illegible]

SAN FRANCISCO MERCHANT

We [illegible] any person sending us the name [illegible] with their subscription [illegible] a handsome copy, bound in [illegible]

THE WINE, PRESS AND THE CELLAR.

[illegible] Pohndorff, [illegible] a settlement in another [illegible]

We can now see the latest viticultural reports from France: the news that the government of that country is about to put a tax upon the wines made from raisins. The calculation is that from 200,000 hectolitres or 5,240,000 gallons of that kind of wine, viz: three hectolitres from each 100 kilogr. of dried grapes, a revenue of one million of francs will accrue to the treasury of the Republic.

The official figures of the amount of wines imported and exported in the first ten months of the present year in France are as follows:

Imports	Hectolitres	Gallons
Ordinary Wines	7,192,817	188,300,000
Liquor Wines	140,241	3,703,000
Exports		
Ordinary Wines	2,113,843	55,900,000
Liquor Wines	43,173	1,148,000

The *Monde des Univers* adds to these discouraging statistics, that the wine crop of France, this year, will make this state of things somewhat worse.

The same paper publishes the march of culture and production of wine in Algiers, during the last five years, as follows:

Year	Hectare planted.	Crop Hectolitres.	U. S. gallons
1878	17,614	338,220	8,930,000
1879	19,991	351,525	9,300,000
1880	25,723	432,580	11,450,000
1881	30,182	288,509	7,625,000
1882	39,068	681,335	18,000,000

The boom of vine planting in Algiers is a livelier one than our California enthusiasm, and it is likely that we shall be unable to keep pace with that colony of France.

The wine crop of Algiers of 1882 consisted of 631,667 hectolitres of red wines, 49,668 hectolitres of white wines. 10,368 European settlers of Algiers had in 1882 32,740 hectares of vineyard planted in vines for red wines and 2,814 hectares for white wines, 12,736 native Algerian planters possessed in 1882 4,184 hectares of vineyard in cultivation, two-thirds of which are for white wines. The crop of these small proprietors in 1882 amounted to only 9,305 hectolitres.

The prices of the deep-tinted wines of the 1883 crop of Spain for blending with clarets, of which France imports enormous quantities, were, according to quotations of November 16th, as follows: In Navara, 11½ litres, 12 to 15 reales de vellon (20 to the $1); in Aragon, 120 litres, $5.50; in Rioja, 16 litres, 14½ to 16 reales; in Valencia, 16 litres, 11 to 13 reales; in Alicants, 16 litre, 13½ to 18 and 21 reales; in Catalonia, 12 litres, 11 to 14 reales.

Too Much Sugar in Grapes.

Mr. F. Pohndorff writes as follows to Professor Eisen, of Fresno. The letter which drew out this communication from Mr. Pohndorff appeared in the Fresno *Republican* and the MERCHANT:

I read with interest your remarks on the above subject in the *Republican* of November 10th. I congratulate you on the expression of opinions which deserve to be weighed, and belong to a subject which it is high time to consider. People often have to battle with the excess of sugar in the grapes when a light wine, or at least a well-fermented one that should be vinous rather than spirituous,, is desired, and are hindered from bringing forth its aromatic and fruit-acid ingredients, these being enveloped in either a disproportion of yet fermentable matters or the wine having undue body, owing to the heavy proportion of saccharine in the grape. More than once the simple suggestion has been made to run the vines up, in order to obtain a different composition in the juice of the fruit. At the same time the necessity of experimenting with different modes of treating different varieties of vines occurred to my mind, and it is with pleasure that I see you grasp the idea decidedly and bring it before those interested. You are quite right in saying that your section will be particularly benefited by the trials with application of the principle, and it is an important step on the part of Mr. Robert Barton to begin practically. Your remarks about the choice of varieties of small berries are to the point, and this requirement (for such it is) must influence your planters for future settingout. We shall require another decade to be guided by absolute results in the choice of what is best adapted, but small berries will for the choice of red dry table wines be a condition in most cases a *sine qua non*.

Abler men will decide what I only presume to be not altogether a safe remedy for the presence of too much saccharine in the fruit—the use of nitric materials in the soil. Your region is fertile, very fertile, and you need not stimulate production, which would be the consequence of enriching a soil already abundantly provided for, as that of Fresno. Then I fear that the taste of the juice would be influenced by the saltpetre, and not to its advantage. But, then, I am no authority on that point, only I know that a juice grown in a soil overrich in nitrates does resent itself from that cause.

You add a very truthful remark, that regarding the right seasoning of the grapes, which with your experience there, will be correct as to the point you indicate for wine making.

Sensible Miss Corson.

The Sacramento *Bee* quotes Miss Corson as saying in a lecture at Oakland: "I think the wives and daughters who fail to give their husbands and sons palatable, nourishing and attractively prepared food are offering them an inducement to seek stimulants their home meals did not supply. I am not in favor of total abstinence, which is quite another thing. I do not believe that the drinking of light wines is injurious to the body, but on the contrary, beneficial, when drank (of course) temperately. I believe that light wines are the greatest aids to temperance in the matter of drinking; and it is the result of my observation that men who habitually drink light wines seldom care for stronger drinks."

The *Bee* comments as follows: "Miss Corson is not alone in this belief, by any means. Many of the most earnest advocates of temperance believe that if persons who have a tendency to indulge in stimulating beverages would drink light, pure wines instead of the stronger alcoholic compounds, there would be far less drunkenness in the land."

The wine men should join hands with the wool growers for mutual protection. Just now the wool growers are the victims of tariff mongers. Some day it may be the wine men.

Fruit Growing in Central America and Mexico.

(Written specially for the MERCHANT by Gustav Eisen.)

The market places of the larger Central American cities are, as a general rule, the most interesting points for the northern visitor. The display of fruit is, if not very grand, at least very interesting. The lover of fruit, the botanist, and even the commission merchant, if perchance one would stray so far from Front street, will all here find a large field for study. If his acquaintance with tropical fruit originated in San Francisco, with oranges, pineapples, mangos and alligator pears, picked green, and ripened and rotted on board sailing vessels, then, indeed, he will enjoy a stroll among the Indians' baskets, loaded with fruit of various kinds. We will begin with the oranges: The majority of the fruit presented in the market is much poorer than the best California oranges. The fruit is small but thin skinned and only too abundantly acid.

But when we consider that the price asked is only one "real," 10 cents, per 100, then all our pretensions are silenced at once. Only occasionally do we meet with fine oranges. These always come from the "boca costa" or the warmer part of the coast, between an elevation of 500 and 2,000 feet. Above this altitude the oranges are by far less sweet, of smaller size, and mature later. Neither the native Indians, nor the Spanish, have the least idea of the existence of different varieties of oranges, and attribute the differences in quality solely to the difference in localities, and name them with the name of the place where they are grown. I believe it never occurred to any one to try if the good kinds would not grow in different localities. Even the limes of one village are splendid fruit, while those brought from and raised a few miles away, with the same facilities, are the poorest kinds. To say "raised" is in reality wrong, because in Central America they hardly raise anything at all; everything raises itself.

During all my travels, I saw only once an orchard that was partially cultivated. The owner, Don Guillermo Rodrigues, one of Guatemala's most intelligent men, had planted considerably of tropical trees, but it was only with difficulty that he could impress his ideas of cultivation on his "mayordomos" and their "mozos." In fact, orange and most other fruit trees grow wild, just like wild apples, pears, plums and nuts in northern countries. What direct cultivation would have upon these fruits from the tropics we are not prepared to say for certain, but we can with some probability judge that the result would not be unlike the same attained in cultivating our originally wild pear, plums and peaches. The genial climate of those latitudes would certainly facilitate the work immensely. Any one having seen the orange orchards of our southern counties, and the careful cultivation bestowed upon them, will only naturally wonder, that any eatable fruit can be grown on trees so neglected, and badly treated.

The lemons are as a rule exceedingly poor. In Guatemala and Honduras, I saw only very few trees, seldom any fruit in the market, and none that could be compared even with those of Southern California. The fault must necessarily be with the people, who take no interest in introducing any new varieties of fruit, or are too stupid to know that any better varieties exist and could be introduced with comparative facility. Lemons we are certain would grow there to perfection, and if exported would materially interfere with the Mediterranean trade.

In limes, the Central American countries excel. We meet with many varieties, from the nice, thin skinned kind to those with tough and thick skin, and bitter and super acid juice; the latter are valueless, of course, for the market. The limes are generally grown as hedges and left to care for themselves. How they would do with some little cultivation could only be decided by experience. Even in the coast districts where limes are grown for shipment, no real cultivation is bestowed on them, and after they

GRAPEVINE
CUTTINGS AND ROOTINGS.

THE FINEST FOREIGN VARIETIES FOR WINES, table use, brandy-making and raisins from the Yerba Buena Vineyard and Nursery, Santa Clara Co.; MATARO, CARERNET, GRENACHE, CHAUCHENOIR, CHARBONO and etc., warranted true to name and are passed through a disinfectant or wash before leaving the place. Fine varieties being scarce and in great demand this season, it is advisable to order early. Apply or address P. O. BURNS, proprietor, box 1193, San Jose, Cal.

are set out, everything is left to care for itself. The limes do not like a very warm climate and in Guatemala and Honduras the best are grown at a certain altitude, say over 1,000 feet; none along the coast.

Among the citrus fruit which considerably attracted my attention was the so-called "Limas." They are rounded, flattened at the poles, with rough, thick skin of pale yellow color; the meat is sweet with a light, peculiar acid, being very different from both oranges and limes, and exceedingly palatable, especially on warm, dry days. A few limes will take your thirst away more effectively than any drink, and will not leave your throat irritated and crying for more. The Limas could be grown here in California; they are said to stand even more frost than oranges.

Some nursery men in our southern counties should by all means import and introduce them here, and a few planted in our own foothills, where oranges do well, might prove profitable.

The Olive.

Heretofore the cultivation of the olive in Southern California has received but little attention from the masses of fruit-growers. It is true that Ellwood Cooper, of Santa Barbara, has gone into the business largely, and has done so with great profit, although from his location near the coast he has been compelled to fight, at great expense, the common black scale, but he has done so with a vigor that has won success, and his profits have been great, notwithstanding the expense of his insect fight. Mr. Cooper has made his money by the manufacture of olive oil, and has paid little or no attention to the pickled olive as a source of profit.

Frank A. Kimball and his brother, Warren C., of National City, San Diego County, have gone into the olive business largely from the pickled olive standpoint. They, too, have had to fight the common black scale and fungus. For several years their trees were free from this pest, and they flourished finely. About three years ago their trees were first attacked, but now the enemy is about conquered and the road clear before them. Their profits have been large. They have done nothing at the manufacture of oil, but have always pickled their entire crop, and find a ready market at remunerative prices.

It has been very generally stated and universally believed that the olive would not flourish away from the coast; that the interior valleys did not furnish the climate conducive to a profitable fruitage of the olive, although the tree would grow well here, and hence but few trees have been planted in Riverside or other interior settlements. This proposition is now being contradicted with good evidence. Olive trees in Riverside are now getting of good age and are bearing very finely. E. W. Holmes has a good crop of olives on his trees; so has Mr. Lockwood and some others. Mr. Holmes has this year pickled a quantity of olives that are very fine. He puts them up in bulk. Mr. Lockwood has as yet only a small crop, but he has commenced putting in bottles, and the samples we have seen show a finely put up fruit that can only be produced by skillful treatment. The olives as pickled by him are superior to the imported in that they are not pickled so green, and hence are more nutritious, and yet they are green enough to retain their green color, which improves the market value over the riper and darker-colored fruit.

The Kimball olives have always stood high in the market. The olive requires less water and less care than most other fruits. There are many places therefore where the olive will do well where there is not enough water for some other kinds of fruit. It takes longer to bring an olive orchard into bearing than it does the apricot, peach, grape or budded orange; it is more like the seedling orange in this respect. But here in the interior valleys the great enemy—the scale and the black fungus—that infects the olive so disastrously all along the coast, will be absolutely unknown. The trees in the interior will be perfectly free. The Cajon Valley, in San Diego county, will be a good place for the olive. This fruit will also do well on the outskirts of our San Bernardino colonies, where water can be had without water rights for winter irrigation.—*Press and Horticulturist.*

California Wines in London.

A friend in the C. P. R. R. office sends us a copy of part of a letter, received by the Company, from its London agent, which should have some interest for California wine producers and brandy distillers. The suggestions made by the writer may not be immediately available, but will no doubt be some day carried out. The following is the extract alluded to:

In this connection I may state that my son once sent me some 20 to 25 bottles of different kinds of wine, and one or two samples of brandy. They arrived here in good order, and I got several dealers to sample them. One large firm, after going through the lot, set four bottles aside, and said he would take forty pipes of each, if I had them in London, and would pay my price in cash. But he would not give an order, for fear I could not get the same article again. He also cautioned me that it would be dangerous for me to undertake it unless I was in the trade, and knew I could duplicate the article in quantities. I have had conversations with hundreds of men who sell wines in clubs and hotels and other places, and they all express the opinion that the wines of California would find a very good market here, if they were kept in stock, but none of them will give orders and trust to what will be sent. They want to see it and taste it, and if it suits, they will buy it on the spot. Therefore, the better way will be for a few of the producers to combine and rent a cellar and sell to the trade or consumers. I think if such a house was opened, the *trade* would generally buy up their stock as fast as it arrived, to keep them off the market, and that in time the California men would only supply the dealers here. The London house could also take the canned goods of California to sell on commission, or buy there and sell here on speculation. Branch houses or offices might be opened in other large centres, both in the United Kingdom and on the Continent, and by a judicious system of advertising might establish a good and permanent trade.

French chickens are coming home to roost. The facts about the very general, if not universal adulteration of French wines sold in this country at low and medium prices, are becoming generally known and the American Press is advocating the use of pure wines of native growth in every State. The *German American Grocer* says:

Our consuls at several of the more important French ports have sent home so many reports—all of which have been published—on the adulteration of wines, that the exporters and compounders are becoming greatly excited. A little information on the mass of wine shipped to the United States goes a great way, particularly after the American is made to understand that nearly all cheap wines are blended; that is, they are mixtures, of different wines which are supposed to overcome the faults of each other, and that even after such mixing there is added cheap alcohol enough to raise the strength to what many people consider satisfactory. That immense quantities of wine go annually from Spain, Portugal and Italy to France, there to be turned into claret, is well known. Consumers have consoled themselves by insisting that these rough wines are at least sound, but now it appears that these too are adulterated before reaching France. From all this it would appear that if Americans cannot drink the finest clarets, of which there are not enough to go around, they must drink of "blendings" and adulterations that are too numerous to satisfy a man who demands a sound, healthful wine. If this is so, why not drink the juice of our native grapes? Nothing worse than blending and adulteration can befall it.

W. A. Spalding, formerly connected with the Los Angeles *Express*, and more recently the owner and cultivator of an orchard and vineyard in the San Gabriel valley, and an occasional correspondent of the *Press and Horticulturist*, has assumed editorial control of the *Rural California*. Mr. Spalding is one of the best horticultural writers in Southern California, and has had practical experience to back up his theories.

The Gnejito Rancho.

Mr. Alfred Gallatin of San Francisco, a member of the firm of Huntington, Hopkins & Co., and Gen. J. Bates, Esq., of the firm of Freeman & Bates, Sacramento, arrived in the city last evening. The party left here on Saturday's train as far as San Luis Rey, where they were met by Major Wentscher and Mr. Levi Hadick, of this city, and together with Surveyor General Willey, proceeded to Mr. Hadick's Gnejito Rancho, for the purpose of inspecting that fine tract of land. We learn that they were very favorably impressed with the country, and the fact is not surprising, for there is not a finer ranch in Southern California than the Gnejito. As the really great resources of San Diego county are beginning to be understood, investors are making the discovery that no section of the State offers equal inducements, and the purchase within the past year of such valuable properties as those of the Cajon Company, the Escondido, Encinquitos and others by men of large capital and experience, tells its own story. The recent inspection of our interior valleys by gentlemen of State reputation, like the Messrs. West, Wetmore, Blowers of Yolo, and other experienced and successful vineyardists and fruit growers, and their strongly expressed judgment in favor of this field of investment, are signs of the times giving assurance that a day of great development has begun. It needs but the personal inspection by capable men of the large ranches of San Diego county to make apparent their capacity for highly profitable cultivation.—*San Diego Union, Dec. 5th.*

Since the above was written, Mr. Gallatin has completed the purchase of the Gnejito Ranch.—Ed. Merchant.

Chaffey Bros' Ontario Colony.

The system of public and quasi-public improvements contemplated at Ontario has been carefully studied by many of the best business men of Southern California, and has received their hearty endorsement. The proprietors of the tract will promise nothing that they do not propose to fulfill to the letter in good faith. They point with pride to Etwanda, where they sold 1,200 acres of land inside of eight months at prices ranging from $100 to $150 per acre. There they redeemed every pledge made to the purchasers of land, whether it was verbal or nominated in the bond.—*Riverside Press.*

J. B. J. Portal, the well known viticulturist of San Jose, writes in reference to Rix, ford's "Wine Press and Cellar" obtained from this office. "I find it full of valuable information to wine growers." Every vineyard owner or wine maker in the State who has not a copy of this work should send us $1.50 by postal note or in one-cent stamps and we will mail him the book by return.

Fred. T. Allen, Secretary of the Illinois Press Association has sold his paper, the *Pontiac Sentinel*, preparatory to moving to his property in Ontario, San Bernardino Co. This colony, as others, is filling rapidly with the best kind of people.

Vine Cuttings.

R. T. Pierce, of Santa Clara, has a quantity of cuttings of leading varieties to sell, as will be seen by advertisement in another column. Mr Pierce has a few Mataro which he offers at $10.00 per thousand. Those intending to plant this valuable grape for Bordeaux wines, should secure their cuttings at once, as this variety is very scarce, and many who intend to plant it, but have deferred purchasing, will get left.

W. H. Stowell, the well known broker in sugar and rice, has been visiting Boston, New Bedford and other cities, renewing the acquaintance of his youth, and will arrive in this city in the early part of next week. The merchants of San Francisco will be glad to see Mr. Stowell back in his accustomed haunts.

SEASON OF 1884!

VINES and VINE CUTTINGS

I take pleasure in informing my patrons that I shall be able to furnish, if called for soon, limited quantities of

GENUINE CUTTINGS

Of the following rare varieties:— FOLLE BLANCHE, COLOMBAR (Sauvignon vert) MATARO, CARIGNAN, GRENACHE, PETIT PINOT (Crabb's Black Burgundy) CHAUCHE NOIR, TROUSSEAU, MEUNIER (same as the so-called Franc-Pinot of Mr. Schoffler—misnamed), CHARBONO, FOLLE NOIRE, MALBECK (same as Lefranc's so-called Cabernet-Malbeck) MOSELLE RIESLING, WEST'S WHITE PROLIFIC, MUSCAT of FRONTIGNAN, SEEDLES SULTANA, etc.

The prices of the foregoing are capricious and some of the varieties, particularly MATARO, MALBECK, CARIGNAN, MEUNIER and WEST'S WHITE PROLIFIC, are nearly all engaged at the present time.

Price lists will be forwarded to those inquiring, as circumstances vary them.

Also, All the Well Known Varieties

such as ZINFANDEL, RIESLING, CHASSELAS, CHAUCHE GRIS, BERGER, MUSCATS (Gordo Blanco and Alexandria) FLAME TOKAY, etc., etc.

ROOTED VINES.

Particular care will be taken in respect to rooted vines to guard against infection by diseases. I can furnish rooted ZINFANDEL, MALVOISIE, VERDAL, FEHER ZAGAS, CHARBONO, etc; at varying prices, according to the demands of different producers.

Also a few thousand CALIFORNICA SEEDLINGS; RIPARIA SEEDLINGS all engaged.

RIPARIA CUTTINGS.

Having made necessary arrangements, I am prepared until January 15th to offer fresh RIPARIA CUTTINGS from the forests of Nebraska—car load already arrived in better condition than ever before received in this State, as follows:

36 inch cuttings at $10.00 per M
42 " " " $12.00 " "

For those who desire ordinary lengths of 15 to 20 inches, I will have them prepared at $7.50 per 1000; but I advise purchasers to take the long cuttings and prepare them to suit themselves. This is the cheapest offering of Riparia cuttings ever made in California.

SEED.

I have fresh Riparia seed (from Nebraska) to offer at

$2.50 per lb. for less than 5 lbs.
$2.00 " " " 5 lbs. and more.

Also, Fresh California Seed at

$1.50 per lb. for less than 5 lbs.
$1.00 " " " 5 lbs. and more.

CIRCULARS

will soon be ready to explain the importance of certain of the rarest varieties and will be furnished on demand.

Address

Chas. A. Wetmore,
No. 321 Montgomery St., or
No. 111 Leidesdorff St.,
San Francisco, Cal.

P. O. Address
No. 111 Leidesdorff St. S. F.

AD MAJOREM

GLORIAM BONI VINI.

The undersigned having enlarged his business, has opened a branch office at No. 321 Montgomery Street, where information can be obtained concerning viticultural and horticultural lands, and where orders for vines and vine cuttings will be received, as well as at the old office, No. 111 Leidesdorff Street.

Having accomplished nearly all that is necessary to be done in establishing a flourishing colony of wine producers in the Livermore Valley, I shall now devote my attention especially to the development of the Viticultural and Horticultural resources of San Diego County, which county is one of the most promising in the State.

Information may be had at this office concerning the remarkable offering of the

EL CAJON LAND COMPANY,

And selections of land and subscriptions to the stock of the Company may be made through this agency. This Company controls 27,000 acres of land in the richest part of San Diego County, where the finest raisins in the State are now made, and where nearly all kinds of fruit, particularly the apricot, pear, apple and olive, are raised to perfection without irrigation, and where, in proper sites, the orange and lemon are successfully grown with such slight irrigation as may be provided by means of windmills. The property commands ample means for irrigation whenever its settlers may desire to use the same.

This property is being subscribed for at an average price of less than $10 per acre to the stockholders; 2500 acres of choice land, platted and laid out with broad avenues, will be immediately allotted to subscribers in severalty. This tract of platted land is worth and has been selling for $100 per acre, but it is included in the whole tract at the average price; 10,000 acres of the whole tract are arable; the balance grazing lands.

THE DIRECTORS

Of this Company will be announced officially, as follows:

Arpad Haraszthy, President,
Dr. Joseph Jarvis, Vice-President,
George West,
George A. Cowles,
Chas A. Wetmore,

The Trustee, during the subscription to the stock, is Mr. Bryant Howard, the cashier of the Consolidated Bank of San Diego. Wm. B. West, Esq., who has made special studies in viticulture and horticulture and who has studied raisin-making Spain, as well as in this State, is a subscriber to the stock of the Company and will devote considerable time during the coming Winter at the San Francisco office of the Company, for the purpose of giving information to those who may desire the same concerning the prospects of this enterprise. Prof. Federico Pohuderff has engaged a portion of the land and stock with the object of establishing an olive orchard.

Those who subscribe early and make early selections of the platted land will never regret doing so. It is expected that all the land will soon be taken up. If fruit raisins and wine, made in the El Cajon Valley, can be seen at this office, also maps and the plan of the subdivided tract.

Those desirous of purchasing a large tract of land—say 10,000 acres, part grazing and part arable—partly the finest alfalfa land, can find a good opportunity, if applied for soon, as the company can dispose of that much for each in one body on terms that will be most advantageous.

Chas. A. Wetmore,

THE WINE MARKET.

A good many cellars in Sonoma and Napa Counties were sold during last week, at prices ranging in many instances about one cent per gallon higher than last year. One cellar, that of Mr. Wheeler of St. Helena, consisting of very choice wines only, was sold at about five cents a gallon higher than any other cellar in the vicinity, but the purchaser received full value.

Very few cellars containing first class goods now remain unsold.

In Sonoma Valley many cellars are already sold which last year remained on the makers hands until July, and even until October of this year. We learn from a dealer that he has just purchased one cellar of '82 red wine at a price less than the maker sold a year ago and a trifle less than the buyer then offered. We are not allowed to give name or price. If vendors wish the exact prices which cellars bring, they must report to us direct.

The demand for Brandy continues light.

[For Exports and Imports, see Merchandise Mart.]

Discount to the trade.

The St. Louis *Grocer* opposes Retail grocers' Associations on the ground that they "are run for self-aggrandizement." What else should they be run for? For the aggrandizement of wholesalers? For the inflation of their trade papers? What else does any man, or firm, or any association of men or firm work for, but self-aggrandizement? Retail grocers should organize and combine in order to keep up with the rest of the world in a. a. Separate and alone a retail grocer don't aggrandize worth a cent.—*Merchant's Review.*

A cow in New Rochelle chewed up and swallowed a toy boat. One is a cow in New Rochelle, and the other is a new row boat in a cow.

They arrested a man the other day for pretending to be a policeman. He was found guilty on the ground that he was asleep. That was considered pretendig.

MEXICO—Per same—4 cs cigars, 12 bgs coffee, 25 cs fish, 575 box limes, 1 bag raw sugar, 18 cs miscellaneous, $391,868 treasure.

DEPARTURE BAY—Per str Empire, Dec 6—785 tons coal.

HONOLULU—Per bark H. W. Almy, Dec 5—350 bdls rushmats, 207 bags rice, 670 bales raw sugar.

HONOLULU—Per brig Consuelo, Dec 5—2292 bgs raw sugar, 13 pkgs miscellaneous.

DEPARTURE BAY—Per Br str Wellington, Dec 5 —2000 tons coal

Charters.

We cannot report any improvement in volume of freight. Some ships, in disgust, are leaving in ballast-seeking business elsewhere. Some are accepting temporary occupation in the coast coal trade, some departing for Australia, where it is reported the wheat crop is heavy. Failing that, they may bring coal back to this coast, where there are indications of a short stock in early spring. Other vessels are laying up here for better times; six have already gone to Sausalito, and are safely moored for the winter in Richardson's bay. The latest business is 26s 6d for orders, Cork, U. K., and 21s 9d for wood, same orders.

The engagements of the week have been; British ship Scottish Minstrel; 1511 tons, wheat to Cork, U. K., 36s 6d—rechartered. British ship Star of Bengal, 1307 tons, wheat to Cork, U. K., Harvre or Antwerp; 60s—chartered prior to arrival. British bark Rylemore; 1198 tons, merchandise to Melbourne; private. Brig J D Spreckels, 250 tons, rough to Kahului. British ship Abbie S. Hart, 1400 tons, wheat to Cork, U. K., or Havre; 31s 6d—rechartered. British ship Poseidon; 1708 tons, wheat to Cork, U. K., 36s 6d—rechartered. British ship Montcalm, 1267 tons, wheat to Cork, U. K., or Harvre or Antwerp; 60s—chartered prior to arrival. British bark Valdivia; 877 tons, now at San Diego, wheat thence to Cork, U. K.; private—chartered prior to arrival. British ship Prince Rudolph, 1372 tons, from Hastings Mills—lumber to the West Coast south America. Ship Pahuyra, 1299 tons, coal from Nanaimo to this port. British ship Broderick, 1788 tons, wheat from Oregon to Cork, U. K., 36s 6d—rechartered. British bark Ahoukir Bay†, 1200 tons, wheat to Cork, U. K.; 37s 6d—rechartered. British ship Sutherland†, 1549 tons, wheat to Cork, U. K.; 36s 6d—rechartered. Ship Detroit, 1438 tons, coal from Nanaimo to this port.

Spirit of the New York Markets.

NEW YORK, Dec 5th.—Dull trade is looked for during the last month of the year as a matter of course; but the markets are more than usually quiet, even for this inactive period, not excepting the movement in holiday specialties. This is indicated by the bank clearings, which statistics show, so far as this city is concerned, are in the aggregate less than half what they were at this time last year, while those for nearly all the other prominent trade centres of the country are also decided decrease. The exhibit thus for the past week is altogether the most unfavorable one that has been reported during the past eleven months. In addition to the marked conservatism which at present prevails, business in certain lines is restricted by the mildness of the season. For the ample stocks of Winter goods which have been laid in the demand is uncommonly light, notwithstanding comparatively low prices current. This sluggishness in the currents of trade exerts a depressing influence upon some branches of the Spring trade, which will soon open, for the dealer whose Winter goods hang on his hands is likely to order sparingly of goods for the ensuing season. There is no doubt that much of the prevailing apathy is due to exceptional and transient causes, and does not represent any deep-seated difficulty or unsoundness; but for all that, it bears with press ng severity upon a large portion of the mercantile community, and especially upon those whose paper is maturing, and whose goods upon the sale of which they had counted to enable them to meet their obligations, he unsold. There are, however, indications that things are at the worst, and that as Congress takes some unwise action there is reason to believe that any change will be for the better. There has been very little change in the Grain markets which are closing a shade easier, and Corn and Oats a shade firmer than on Friday last. Flour is dull and irregular. Choice grades of Butter and Cheese continue firm. Foreign Beans are lower, and Domestic very dull. Provisions are generally firmer. Cotton is dull, and futures are lower. Wool is inactive, and prices are barely steady. Both Cotton and Woolen manufactures are so depressed as to unfavorably affect the raw materials. Hops, Tobacco, India Rubber, Drugs and Dyes and Naval Stores are quiet but steady. Hides are more active and firmer, and Leather quiet and steady. Refined Petroleum is dull and unchanged, and Crude Certificates are lower. Raw Sugar is quiet and about steady: Refined is in moderate demand at unchanged prices. Molasses is easier. Coffee is dull and nominal. Teas quiet and steady. Spices are dull. Rice is slow of sale. Pig Iron is quiet and steady. Tin is dull and barely steady. Lead is dull and weak. Copper and Spelter are unchanged. Turkish Prunes, Currants and Dried Peaches are a trifle more active, with no appreciable change in rates

Trade Failures.

There were 232 failures in the United States reported to *Bradstreet's* during the week ending Dec. 1st, 1 more than the preceding week, 16 more than the corresponding week of 1882 and 74 more than the same week of 1881. Compared with the preceding week the middle states had 15 decrease, 10 New England states 29, an increase of 5, Southern states 12, a decrease of 1; western states 180, an increase of 10, Pacific states and territories 20, an increase of 3, Canada 21, decrease 1. The important firms reported out are as follows: Mc. & Mayer, wholesale clothing, and John Lange, artist and decorator, New York. The following affiliation Iron Works Company, Beloit, Wis.; Lane Bros. & Rothling Company and John Lasher, insolvent, Dover; W. C. Smith, general store, Barlow, Ky.; little personal trade as they were as follows: general stores 96, grocers 32, clothing 19, shoes 11, miscellaneous 11, liquors 9; dry goods 8, drugs 8, hardware 7, jewelry 6, grain, flour, etc., 6; lumber 6, hotels and restaurants 6; fancy goods 5, furniture 5, carriages 1; millinery 4, tobacco and cigars 3; produce and provisions 3; bakers and confectioners 3; iron 3, harness 3; cotton 2, butchers 2

The Sacramento *Bee* commenting on the cruel imposition practiced upon George F. Parsons by so-called spiritualists, says:

"If the spirits of the dead could really return to earth to cheer the drooping spirits of the living, it is not to be supposed that they would speak through the mouths of penurious tricksters. If God Almighty desired to warn His people, through the medium of those gone before, of the things they should do and those which they should leave undone, it would be blasphemous to suppose that He would resort to all the juggling of dark seances, rope-tying tricks, guitar strumming by unseen hands, and all the other arts practiced by mediums, in order to make known his wishes. God moves in a mysterious way. His wonders to perform, but He certainly is not a motive power in a cabinet seance."

We would like to see the whole crowd of astrologers, medimus and clairvoyants arrested for vagrancy. A law making it a misdemeanor for newspapers to advertise their performances would clip their wings.

There are some misguided politicians who are anything but statesmen, who having the opinion that for one election at least, a sweeping reduction, in the tariff would be popular, and so elect them to office are advocating such a measure; here is what the *Commercial Bulletin* has to say about the prospects of our domestic sugar interests:

"If all signs of the times may be believed, the next industrial boom is to be in sugar and sugar machinery. The practicability of the production of sorghum sugar in the United States as a commercial success is already demonstrated, and in three different locations widely separated in latitude and longitude the industry is already established. Rio Grande, N. J., made 350,000 pounds of sugar last year, and will this year double the product. At Champaign, Ill., there was a product of 150,000 pounds last year, which will this year be doubled. At Hutchinson and Sterling, Kan., there are factories which have already demonstrated the practicability of the industry as well, and there is nothing to prevent the establishment of one thousand sugar plants during the next ten years and the production of $25,000,000 worth of sugar. This is no visionary matter, the product may quite likely be $50,000,000 in that time, and the value of machinery and capital employed fully $150,000,000 even if in that time we are not producing the entire $100,000,000 worth of sugar now imported."

An exchange says: "A man was driving an old ox when he became angry and kicked him, hitting his jaw-bone with such as to break his leg. And we have been fairly wild ever since we read the paper to know who or which got angry at whom or what, and if the ox kicked the man saw with such force as to break the ox's leg, or how is it? Or did the man kick the ox in the jaw-bone with such force as to break the ox's leg, and if so, which leg? It's one of those things which no man can find out, save only the man who kicked or was being kicked, as the case may be.

Jams, $4 00; Jellies, $5 00 ₱ doz, Fry's Chocolate, 50c ₱ lb; Cocoa, 45c ₱ lb, Colman's Mustard, 60c ₱ lb.

COAL—
Imports, 1320 tons Pac Coast, 1790 tons Foreign and Eastern
Our stock has been largely augmented again this week by free arrivals; it is singular to note that the yards do not show the accumulation, evidencing liberal deliveries from ship's side Consumers with good judgment, bearing high r prices, are stocking up ahead A total figures show that the entire amount of Foreign Coals en route and loading that can possibly arrive here within the next six months is less than 120,000 tons, unless the Australian list should be largely increased, which is improbable. Add to this about 120,000 tons of Anthracite and Cumberland to arrive within the same time, shows less than 140,000 tons, so that the stock on hand and supplies from our Coast Collieries must make up the deficiency of 300,000 tons, which our actual requirements will call for within the next six months.
The above showing should not warrant any decline from present prices in the meantime.
Importers' prices of coal for tgn and American, to arrive: Australian, $8 50 @ 8 75; Liverpool Steam, $8 50 @ 8 75; West Hartley, $8 75 @ 9 00, Scotch Splint, $7 50 @ 8, Cardiff Steam, $7 75 @ 8, Lump, lehigh, $13 @ 13 50, Egg, Harlan, $14 @ 14 50; Cumberland, bulk $10 @ 10; Spot prices are as follows: Australian, $8 75; Liverpool Steam, $9 00, West Hartley, $9 @ 9 25, Scotch Splint, 9 50, Cardiff, $8 00, Lehigh Lump, $13, Cumberland, bulk, $11 50; Egg Hard, $13 50.

QUICKSILVER—
Exports, 50 lbs lx.
Quicksil er is to better demand at unchange l prices. We note sales of about 1000 flasks for export.

RICE—
Imports, 995 bgs. Exports, 64,225 lbs.
Holders continue firm in their views, but the demand is light. There is no change in quotations.
We quote Mixed $1 10 lbs—; No 2 China $4 65 @4 75, good No 1 $5 50@6 00c; Extra No 1 very scarce at $6 75. Hawaiian $4 62½@4 75.

SALT—
Exports, 1424 lbs.
Liverpool fine we quote at 16 at 20 ₱ ten. Calfornia, 25@10 for Bay; do crystal, $10@15 Carmen Island, fine, $16@22; do coarse, $12; do on half ground, $9@14.

SOAP—
Imports, 3 bxs. Exports, 62 bxs.
We quote: California Castile, Mottled, 8¾@12 White, 16; French Castile, Mottled, 11@12½ White, 17@20; California Pale and Chemical Olive, 5½@6c; Washing Powders, $12@15 per gross.

SPICES—
We quote: Black Pepper, 15@16c; White Pepper, 22@— c; Allspice, 12@16c; Cloves, 22@27c; Cassia, 9@10c; Ceylon Cinnamon, 45@50c; Ginger, 8@15c; Nutmegs, 65@ —c; Mace, 60c; Borneo Ginger, 16@18c.

SPIRITS—
Imports, 99 cs gin, 25 cs whiskey, 11 cs 568 bbls liquors. Exports, 1 cs brandy, 111 gls 27 cs 3 bbls whiskey, 2 cs liquors.

SUGAR—
Imports, 14,398 bgs raw. Exports, 17523 lbs refined
Raws—Business in grocery grades has been very dull during the week, the only sale being 192 kegs Hutchinson ex-Alameda at 7¾@8c.
Refined —The demand for Refined is fairly good for this time of the year. The New York market is very quiet with only a moderate demand at slightly lower rates.
We quote New York prices yesterday, A crushed 8⅝@8¾c, Granulated 8c, and Standard A 7 7-16@7¾c Yellow ⅞@7½c.
We quote local refinery rates, prices subject to change without notice.
(A) Pat Cube Sugar, in bbls, 10¾c; (A) Crushed sugar, 10¾c; Extra Powdered sugar, in barrels, 8c Fine Crushed sugar, in barrels, 10¼; Dry Granulated sugar, in barrels, 10¼c; Extra Granulated sugar in barrels, 10c; Extra C 9¾c; Golden C sugar, in barrels 9¼, D sugar in barrels, 8¾c; Fine Powdered, in bbls, 11½c; Confectioners' (A), 10c; El Dorado C, in barrels, 9¾c; Maripos C, 9¼; Nonpareil, 8¾c; half barrels, ¼c, and boxes, ½c more for all kinds.

TEA—
Exports, 378 lbs.

TIN, ETC.—

Total	$99,842 23

Meat Market.

BEEF—First quality, 8@8c; second quality, 6¾c to 7¾c, third quality, 5½@6c ₱ lb
VEAL—Large Calves, 8½@9c; small ones, 9@10½c ₱ lb.
MUTTON — Wethers are quotable at 5½@6c and Ewes at 5c@5½c ₱ lb, according to quality.
LAMB—Spring is quotable at 6c@6½c ₱ lb.
PORK—Live Hogs, 5½@5¾c for bard grain hogs on foot; dressed, do, 7½@7¾c.

Some Democratic papers express a regret that the Constitution forbids the election of the Governor of the State as United States Senator. Stoneman is undoubtedly making a good Governor, but there is no reason for regretting this provision in the fundamental law. Some of his predecessors might have made better governors had they not been ambitions to leap from the gubernatorial chair into the United States Senate. Governor Stoneman has two qualifications for the Senate which to our thinking are important. He derives his income from cultivating the soil and raising fruits and vines, and he hails from the Southern part of the State. But though Governor Stoneman is ineligible, the Democrats can if they are so minded find some other gentlemen imbued with Democratic principles who can fitly represent in the National councils those interests whose present development and promise of greater prosperity in the near future, are building up the semi-tropic counties, with unexampled rapidity. Every senator that has represented California in Washington has been chosen from San Francisco or Sacramento or their vicinity, with the exception of Sargent and Farley, and they came from mountain mining counties and both are lawyers.

S. L Jones & Co., of California street, have a consignment of East India tea similar to that which is interfering in England so larg ly with importations from China. This tea is to our mind superior both in strength and flavor to either Japan or Chinese, and has only to become known to be appreciated. Moreover, these teas can be sold at lower prices than any China that can be in any sense compared with them.

The Annear Sances and Condiments are becoming very popular, and retailers who keep them in stock say that all customers who have tried these various preparations come back for renewed supplies.

DOMESTIC SUGAR.

The day is coming, and not far distant when the United States of America will produce from cane, sorghum and beet, three-fourths if not all the sugar it consumes, except what "raws" we may draw from countries that have fair and equitable reciprocal treaties with us. To-day we have only one such country, the Hawaiian Islands; in a few months we hope to add at least another, Mexico, but in the meantime California is in a fair way to manufacture a large quantity of excellent sugar from beets grown by California farmers.

The talk of abolishing the duties on sugar will not come to much, and perhaps for this reason Congress cannot make fish of one interest and flesh of another. If the Louisiana cane planters, the sorghum and the beet sugar men are to have no protection, then neither can it be given to sugar refiners. And if refined sugar can be imported from abroad free of duty, the French, German and Austrian bonus-encouraged sugar and Chinese refined sugars will destroy the business of sugar refining in America, as it has destroyed that of Great Britain.

That the reduction of customs duties on foreign merchandise by the Republic of Salvador on October 1st of 10 per cent, and on January 1st next a further reduction of 10 per cent, ought to largely increase the trade between this port and that republic.

That if nothing succeeds like success, how about that False Prophet?

PRODUCE MARKET.

The absence of rain has stopped plowing to a great extent in the Sacramento and San Joaquin valleys. Some croakers are already beginning to talk of a dry year, but we have heard the same cry every year about this time unless there was a superabundance of rain and then the same croakers would expect a flood.

LONDON, December 11th.—The *Mark Lane Express* in its weekly review of the British grain trade says: The weather is freely, with snow in the South and in the Midlands. There is rather more pressure to sell English wheat, and values are consequently weaker. Flour is steady, with a moderate demand. Maize is steady, and mixed American is very scarce at 28s. ex ship. The decline in medium class barley continues to be more serious than can well be shown on the surface. The Off Coast market is in bare supply of all kinds of grain. One arrival Thursday of American Red Winter in a sailing vessel went at 41s. 9d. Sales of English Wheat are weak, 74,355 quarters at 40s. per quarter, against 53,065 quarters at 41s. 8d. the corresponding week last year.

The Imports and Exports given below are up to Wednesday evening.

FLOUR—
Imports, 1046 bbls. Exports, 34814 bbls.
Receipts, of week, 11990 qr sks.

Besides the local demand, there is a good export movement at unchanged figures.

Extra, $5 75@6 00. Superfine, $4 00@4 75 Country ditto, $3 65@4 50. Interior Extra $5 00@5 50 per bbl for jobbing parcels to local consumers but round lots for export can be obtained for some what less figures.

WHEAT—
Imports, 6140 sks. Exports, 206559 ctls
Receipts for the week, 385,1092 ctls.

The market has been dull during the week, and buyers have not been very anxious to invest. On the other hand, sellers do not press sales, so the market has not ruled much in excess of $1 82½c Floating cargoes in a shade weaker. In the Call board there is also a slight speculative movement. In the Produce Exchange Call Board yesterday the sales footed 700 tons No 1 wheat, as follows:

Seller 1883—100 tons, $1 84; 300, $1 84½.
Buyer January)—200 tons, $1 86¼.
Seller season—100 tons, $1 83 ₰ ctl.

In the sample market we quote: Choice Milling, $1 85@1 87½; good do, $1 90; No 1 Shipping, $1 82½; No 2, $1 72½@1 77½

BARLEY—
Exports, 924 ctls
Receipts of week, 14407 ctls

The cold, dry weather is having its effect on the spot market, and large sales have been reported at $1 16¼ for No 1 Brewing against $1 19 as the top figure at this time last week. The sales in the Call Board yesterday morning footed up 3300 tons No 1 Feed, as follows:

Seller 1883—100 tons, $1 05¾.
Seller season—300 tons, $1 05⅝; 100, $1 03¾; 800, $1 04
Buyer season—100 tons, 1 15½; 600, $1 15⅝; 1300, $1 16 ₰ ctl.

In the Sample market Brewing is getting into better shape, while samples of parcels that are yet in the interior are refused, buyers preferring immediate delivery to buying to arrive. By sample, quotations are No 1 Feed, $1 02½@1 05; No. 2, 97½@$1 00, No. 1 Brewing, $1 10@1 15, Chevalier, coo to choice, $1 35@1 50, Coast, $1 10@1 15.

OATS—
In ports, 2818 sks 1 per bl. Exports, 20 ctls.
Receipts of week, 9118 ctls.

The market is well supplied with secondary grades, and prices are easy. Strictly choice, however, are not abundant and are very firmly held.

We quote: Surprise and Milling, $1 75@1 80, No 1, $1 65@1 70; No. 2, $1 50@1 60, Black, $1 50@1 55 ₰ ctl.

CORN—
Exports, 332 ctls.
Receipts, 557 sks.

There is very little doing in Corn. Quotations are unchanged.

BUCKWHEAT—
Receipts of the week, 29 sks.

The demand is very small.

We quote the market nominally at $2 25@2 50 ₰ ctl.

RYE—
Receipts of the week, 411 ctls

The Rye market is also very dull. The receipts are about 11 per cent. of what they were last week. We quote the market at $1 25@1 30 ₰ ctl.

MILLSTUFFS—
Imports, 216 ctls millstuffs. Exports, 251 ctls bran, 1243 ctls millstuffs.
Receipts of week, 7018 sks Bran, 1879 sks Middlings, 1711 ctls Ground Barley, 752 ctls ground feed.

Offerings of Bran are more free and the market is easier but without quotable change. Middlings are fairly steady.

We quote: Ground Barley, $23 50@24 per ton. Middlings are selling at $21@$22 00 per ton; Wheat Bran, $17 50@18 per ton; Oil Cake Meal $30, Feed Corn Meal, $35@36; Cracked Corn, $36 per ton.

HAY—
Exports, 150 tons.
Receipts of the week, 1855 tns.

Trade is good, but holders are not pressing offerings.

We quote: Alfalfa, $7@$10; Wheat, $13@$15, Stable, $12 00@14 00, Wild Oat, $13@$15; Cow, $9–11; Barley, $10@12 50 per ton.

STRAW—
Receipts of week, 57 tons.
Quotable at 55@65c ₰ bale, as to condition.

SEEDS—
Imports, 15 cs 13035 sks.
Receipts of week, 361 sks alfalfa.

Flax quotable at $2 50@2 75 ₰ ctl; Canary, 5@5½c; Alfalfa, 9½@10c ₰ lb; Timothy, 7½@8c for native and 8@9c for imported; Mustard, choice Brown, $3 00@3 25 ₰ ctl, White, $2 75@3 00, Hemp, 4c, Rape, 5@3½c

BEANS—
Exports, 35 ctls.
Receipts of the week, 2766 bags

It is very evident that Whites have touched bottom for the present, which is the more remarkable because trade continues dull, so there is great hope of them making a nice little spurt when trade revives because the bulk of the crop is in warehouses here, and held by firms who paid more for them than present figures

Limas are still lower, with no possible outlook, except a drought.

Colored have weakened slightly, but have not become anyway demoralized, as there are not too many of them in the State to supply our own local wants

Butters are not plentiful and stocks are well held

Our quotations are, for round lots from the wharf. Small White and Pea, $3 12½; Bayos, $3 40; Flinks, $3 15; Reds 3½; Butters, $3¼; Limas, $3¾

VEGETABLES—
We quote: Carrots, 30@35c; Turnips, 75c@$1 00; Cauliflower, 60@75c ₰ doz; Cabbage, 60@75c ₰ ctl; Garlic, 2½c ₰ lb; Celery, 50c ₰ doz; Dried Okra, 25c ₰ lb; Dried Peppers, 12@13c ₰ lb; Tomatoes, 50@75c ₰ box; Artichokes, 40@60c ₰ doz; Beets, 75c ₰ ctl; Parsnips, $1 25 ₰ ctl; Marrow fat Squash, $20 ₰ ton; Mushrooms, 10@15c ₰ lb.

FRUITS—
Imports, 56 cs fruit, 73 bxs apples, 3361 bnchs bananas, 125 bxs limes. Exports, 2183 bxs fruit 397 bxs apples

We quote: Domestic—Strawberries, 20c—₰ chest; Apples, 50@75c ₰ box; Pears, 50c@$2 00 ₰ box; Grapes, 50c@1 50 ₰ box; Cape Cod Cranberries, $18 00 ₰ bbl; Western do, $17 00@17 75 ₰ bbl.

Tropical—Lemons, $6 50@7 per box for Sicily; Limes, $10 00@11 00 per box for Mexican; Bananas, $2 00@3 00 per lb, Bananas, $1 75@$4 00 per bunch; California Oranges, $2, 25@2 50; Loretto Oranges, $20 50@22 50 per M.

NUTS—
Imports, 10 bags 54000 cocoanuts. Exports, 25 bags nuts.

We quote: Cocoanuts, $6@6 50 ₰ 100; California Walnuts, 9@9½c ₰ lb; Chili do, 8@8½c; Filberts, 12@13c per lb, Barcelonas, $1 75@$4 00 per bunch; California Oranges, $2, 25@2 50; Loretto Oranges, $20 50@22 50 per M.

NUTS—
Imports, 10 bags 54000 cocoanuts. Exports, 25 bags nuts.

We quote: Cocoanuts, $6@6 50 ₰ 100; California Walnuts, 9@9½c ₰ lb; Chili do, 8@8½c; Almonds, Languedoc, hard shell, 7@7½c; soft shell, 15@16c; Filberts, 15@16c; Pecan, 13@14c; Peanuts, 5@5½c; Brazil Nuts, 15@16c; Hickory Nuts, 7@8c.

HONEY—
Exports, 421 lbs.

We quote: Extracted, 7½@8c; Ex White Comb 18@20c, White, 13@16c, Dark, 12½c.

BEESWAX—
We quote 26@30 c per lb.

DAIRY PRODUCE—
Imports, 30 lbs butter, 5100 lbs 1 bx cheese. Exports, 2388 lbs butter, 1393 lbs cheese.

Butter has declined from the figures of last week though the market was in better condition yesterday than it had been for some days.

We quote: Point Reyes, 37½c; Choice, 32½@35. Fair to Good 22½@30 inferior lots from country stores, 16@17c; Brkin, 20@22c for old and 25@27½ for new; Eastern, 15@17c, Pickled Roll, 25@27½. Cheese, California, 16@18c for choice; 13@14½c for Fair to Good; Cream cheese, 16@18c; Eastern, 17@18c; Western, 10@13c.

OLEOMARGARINE—
We quote the range from 20@22½ according to package

EGGS—
Imports, 397 bxs Exports, 7 bxs

Prices have improved since last week under smaller receipts.

We quote: California Eggs, Choice Ranch, 37½@40c per doz; Eastern, 32½@35c.

HOPS—
Imports, 119 bls. Exports, 151 bls
Receipts of the week, 557 bls

The market at present is very dull and weak and will probably remain so until near March. There are some few orders on the market for but a limited quantity of strictly choice, but as such are offered they are not being filled. The New York and English markets are also stagnant. Dealers down to-day in stock to carry into the New Year will extend special inducements are offered them, which are not forthcoming.

ONIONS—
Exports, 160 ctls
Receipts of week, 2286 sks

Few choice arriving which are readily picked up at 90c.

GAME—
We quote: Quail, 1@1 25 ₰ doz; Snipe, Hare, $2 00, Rabbits, small, $1@1 25, cottontail $1 25@$1 50 ₰ doz; Teal, 75@$1 00; Sprigs, $1 75@$2 00; Widgeon, $1 25@1 37½; Mallards, $2 25@2 75 ₰ doz, canvas backs, $1 00@1 50 per doz; common snipe, 50@75c ₰ doz; English, $1 25@1 50 ₰ doz, Geese, $2 50@3 50 per doz; White Geese, $1 25@1 50, Honkers, $2@3 per doz.

POULTRY—
We quote: Turkeys, Live to Hillers, 21@22½ per lb; Turkey Hens, 21@25c; Dressed, 23@25c; young Roosters, 8@00c7 00, old Roosters, 5@6@6 50; Hens, $6 50@8 00; Broilers, $5@6 75 according to size; Ducks, $8 @10 00 ₰ doz; Geese, $2 25@$2 75 per pair

POTATOES—
Imports, 1163 sks Exports, 5063 ctls
Receipts of week, 18511 sks

The market has revived until Early Rose sell readily at 45c and choice Peerlesses and Tuckers at 85c. Early Rose have sprung into demand as they are the only decent white potato on the market

We quote: Early Rose 50@65c, River Reds, 40@45c; Tomales and Petalumas, 80c, Chili, Cove, $1; Hornbobbits, 80c, Sweets, $2 @2 25

WOOL—
Imports, 1422 bls.
Receipts of week, 163 bls
For Wool market see Wool Department

HIDES, SKINS, ETC.
Imports, 781 hides 272 bls hides, 111 bdls 2 bls skins, 261 bls 316 tins tallow. Exports, 7722 lbs tallow

Heavy Salted Steers, over 55 lbs, 10@10½c per lb
Medium Salted Cows and Steers, 50@55 lbs, 8½@9c
Light Salted Cows and Steers, 40@50 lbs, 8c per lb. Salted Kips, 10c per lb; Salted Veal, 12½ per lb Salted Calf, 15c per lb.

Dry Hides, usual selections, 17c—per lb
Dry Kips, do, 17@—c per lb. Dry Calf, do, 17@21c per lb.

THE WHEAT FLEET.

During July, 9 grain vessels cleared of 12,622 register tonnage carrying (including 100 ctls, valued at $2671, shippe to miscellaneous ports) 385,680 ctls of Wheat valued at ~500,743 besides 24,343 bbls of Flour valued as $177,033, which includes 20,100 bbls valued at $124,5[illegible] shipped to China and elsewhere.

During August, 24 vessels cleared of 32,830 register tonnage carrying (including 1922 ctls, valued at $8,390 shipped to miscellaneous ports) 956,699 ctls of Wheat valued at $1,004,019; besides 46,614 bbls of Flour valued at $422,558, which includes 45,566 bbls valued at ~221,[illegible] 048 shipped to China and elsewhere.

During September, 36 vessels cleared of 53,106 register tonnage carrying (including 1842 ctls, valued at $3,187 shipped to miscellaneous ports) 1,752,317 ctls of wheat valued at ~2,700,053; besides 78,650 bbls flour valued at $391,174 which includes 57,153 bbls valued at $275,124 shipped to China and elsewhere

During October 36 grain vessels cleared of 49,829 register tonnage, carrying (including 2,955 ctls, valued at $3,89[illegible] shipped to miscellaneous ports), 1,505,057 ctls of wheat, valued at ~2,519,[illegible] 158, besides 105,914 bbls of flour, valued at $505,882, which includes 78,479 bbls, valued at $161,541 shipped to China and elsewhere.

During November, 39 grain vessels cleared of 52,932 register tonnage, carrying (including 2395 ctls, valued at $4272, shipped to miscellaneous ports) 1,522,291 ctls of Wheat, valued at ~2,613,[illegible] 6[illegible] besides 172,972 bbls of Flour valued at $731,728, which includes 43,965 bbls valued at $209,065 shipped to China and elsewhere.

VESSELS CLEARED SINCE DECEMBER 1st.

A. D. BELL . . . . . Editor.

FRIDAY . . . DECEMBER 14, 1883

We have received from Henry G. Hanks, State Mineralogist, an advance copy of the third annual report of the California State Mining Bureau. It contains a large amount of very interesting information about the valuable Borax deposits of this State and Nevada. All mineralogists, miners and prospectors should procure a copy, and as this is a State document, it can be had free.

In the past ten months of the current year—that is, from January 1st to October 31st, inclusive—the United States exported $63,159,129 more than it imported. The favorable condition of commerce, one which attracts the attention and admiration of every British financier and statesman does not please the free trade party. They want to so manipulate the tariff that the balance will be the other way. That is, after exporting all the breadstuffs, provisions, petroleum, etc., we can spare, we shall have to ship half the bullion our mines produce to pay for our purchases in Europe.

ALL OUT.

The S. F. *Chronicle* is deeply interested, that means its bank account is concerned, in sugar matters. It wants the Hawaiian treaty abrogated, but it does not desire any further reduction of the sugar duties. Abolition of the sugar duties would kill the treaty by indirect means, but would not justify the *Chronicle* in collecting its fee from the New York refiners. In an article on domestic sugars, it speaks of the progress beet and sorghum sugars are making in other States, and of the disastrous failures in making beet sugar five and ten years ago in California, but overlooks the fact that the first and only beet sugar refinery on this continent that has turned out a first-class article, and proved a financial success to the stockholders, is the Standard Company of California, located at Alvarado, Alameda county. A daily paper that addresses a community on matters that affect its welfare, and on which it professes to be so well informed as to be able to instruct others, should know what is going on under its own nose. The *Chronicle* staff, or most of them, are using beet sugar from time to time, and don't know that there is such an article made in California.

That there is just as much reason why the United States should quarantine whiskey or brandy by keeping it in bond for three years, for the protection of the health of citizens by compulsorily ageing it, as there is in quarantining human beings or cattle to prevent the introduction of diseases which might spread to other persons or herds.

Is This Monopoly?

The *Chronicle* finds fault with Mr. Spreckels for buying Hawaiian sugar for the California Refinery. What would the *Chronicle* have him do, buy China sugar? or perhaps they would wish him to remove his machinery to Hongkong, where he would have the advantage of Chinese labor at the low rates which prevail in China, instead of paying white men at the current rates, which obtain in this State? It was known two months ago that Mr. Spreckels had contracted for about four fifths of the coming season's crop, including that of the plantations in which he is interested at prices regulated by what is known as the New York-Cuban basis, instead of the San Francisco-Manila basis, as in former years. The remainder of the crop, it is said, has been taken on similar terms by the St. Louis refinery. The latter refinery tried some Hawaiian sugar two years ago, and was satisfied with the results.

We have three sugar refineries in this State and the management of each differs in the estimate of the several raws that come to this port. Mr. Spreckels, as is known, prefers Hawaiian sugars. The American Sugar Refinery is run almost entirely on Manila sugar and its managing director, Mr. Steel, claims that he can lay these raws down here on better terms than Mr. Spreckels gets from the Island planters. The Standard Sugar Refinery, though comparatively a small concern to either the California or the American, ran last summer for a time on Central American raws, and Mr. Dyer, the President, says he can obtain better results from them than from either Hawaiian, Manila or China. Now where does the "monopoly" or the "grab" come in? The fact is, the *Chronicle* is a vindictive and malicious, lying scold. In no civilized country in the world would papers claiming any influence in commercial circles publish such drivelling nonsense as that which has appeared almost every day in the *Chronicle* of late, and which sometimes is printed in other San Francisco journals on this subject. Why not cry "monopoly" because W. T. Coleman & Co. secure the largest proportion of the salmon pack or of the raisin crop, or A. Lusk & Co. contract for the bulk of the orange crop? Because merchants pursue their legitimate business, are they to be pelted with mud? Or shall Congress be pursued with appeals to abolish the duties on Fraser River salmon, or Malaga raisins, or Tahiti oranges? The fool-killer ought to visit some California editorial rooms.

The Consul General of the Republic of San Salvador in France publishes a communication, according to which by decree of September 21st, the Government of San Salvador, being desirous of favoring the interests of commerce, has decided to reduce from the 1st of October, 1883, by 10 per cent. the duty on imported merchandise, and on the 1st of January, 1884, to make a further reduction of 10 per cent. in the customs tariff.

It is reported that land owners about Wheatland are preparing to engage largely in hop culture. The enormous profits derived a year ago from hop-growing has doubtless had much to do in stimulating this industry. In New York, however, the hop-growers are in many instances pulling up their vines, as they think the business is being entirely overdone, and that another such market as that of 1882 will not be known for a life-time to come.—*Sacramento Bee.*

That Pittsburg manufacturers do not like the election of Carlisle as Speaker.

That Esau sold his birthright for a mess of pottage, and Tennyson has sold his reputation as a poet for the title of Baron.

That F. B. Taylor, formerly an oil merchant of this city, has not come back to California without a purpose.

That Warden Shirley is right in one thing, opium and alcohol have no place in a State prison, except in the medicine chest.

That the President is right, the only way to reach the Mormon evil is to abolish the Territorial government.

That Ontario continues to attract the attention of Eastern visitors looking for investment for residence purposes.

That the probable policy of Carlisle is being discussed in tones of fear or hope by nearly every paper in California.

That most men have a resemblance, in some way, to an animal—Nielson-McCann resembles a pole-cat.

That spiritualism ought to have received its death blow. The deception practised on George F. Parsons was cruelty that deserves the severest punishment.

That Speaker Carlisle, and his adviser Watterson, would ruin this country this session if they had not the fear of a resentful vote at the next presidential election.

That the American Admiral, who sneered at the Chinese army, got very mad when the Chinese generalissimo laughed at the American navy.

That the Ontario *Fruit Grower* is pointing out the extravagant waste of water in Los Angeles county, by the use of open ditches instead of pipes.

That the grace of God is a good thing but it does not always keep a deacon chaste, a cashier honest, or an ordinary man from outbreaks of temper.

That Chet Arthur may be re-elected President, but over a hundred thousand people, including ourselves, have not yet made up their minds to vote for him.

That Peck with his Bad Boy is corrupting the spoiled youth of America, and Peck knows it. But there's money in it, if he is playing the devil in the family.

That San Diego will come to the front as a raisin county, there can be no longer any doubt; neither is there any doubt that its raisins will be superior in quality.

That the President of the United States ought to have something better to do than interfering in criminal trials held in Great Britain for offenses committed in British jurisdiction.

That it does not look well that in a State which has such varied facilities for profitable agriculture, our College of Agriculture in the State University, has so few young men attend it.

That the climate and fertility of California can only be perpetuated by extensive forest planting. If this is neglected, our great grandchildren will flee from California because it will have become a sterile desert.

That L. J. Rose, the blood-horse breeder wine grower and brandy distiller, made from his vineyard, Sunnyside, San Gabriel, Los Angeles county, 30,000 boxes of raisins this season.

That of the mass of bills already introduced into the House of Representatives, not one in ten will be reported by the committees, and not one in twenty become law.

That France may have rescinded its prohibition of American pork for open and above board reasons, but it may have done so to curry favor with our Congress and get the duties on French wines reduced. We shall see.

That the wiser of the Democratic leaders like Voorhees and Randall do not believe in any "tariff for revenue, with incidental protection," nonsense, but squarely announce themselves for protection for domestic producers and manufacturers in the home market.

That Althea Hill, Nielson-McCann and Tyler make us weary. For McCann we are half inclined to repeat a prayer offered by the gentle and pious Bierce for another nuisance "May the devil stick his teeth together with a gob of stiff pitch, and plaster up the mouth of him with a trowel of brimstone blazing hot."

That the *News Letter* reproving London *Truth* for slandering a lady, justifies the rumors that Marriott's, *pere et fils*, have joined the Salvation Army and that the Rev. W. Nielson McCann has leased the Metropolitan Temple and will occupy the pulpit formerly alternately filled by the adulterer and the murderer.

That the *Bulletin's* remedy for dyspepsia is abolishing buggies and riding on horseback. Sir Walter Scott, for reasons differing from the *Bulletin*, implored his son to be a gentleman, ride on horseback and never to enter a gig, a two-wheeled vehicle that answers the purposes of the American buggy.

That the Ontario *Fruit Grower* scouts the idea that in about three years San Diego will be ahead on the list of raisin-producing counties. It may not be in three years, but we believe in seven San Diego will be. Other counties have their vineyards planted, San Diego is yet to plant; hence the delay in the harvest.

That the N. Y. *Tribune's* recent article on the merits of California wine is being largely discussed by the the press of the wine counties. The article would have carried more weight if it had not contained that absurd statement that California wine was being exported in quantities to France and re-imported into this country as California claret.

That judging by the address of Sunset Cox and other Congressmen to President Arthur, the Democratic party is being dragged into partnership with the dynamite and assassination party on the the other side of the water, but some who vote the Democrat ticket and sympathise with Ireland's real wrongs will object to this action of Democratic leaders.

That the spite of the proprietor of the *Chronicle* against a well-known capitalist of this city is so well known to the reportorial as well as the editorial staff of the paper, that one of the former gentlemen wants the view of the sugar works of the Hawaiian Commercial Company omitted in exhibiting the panorama of views in the Hawaiian Islands. Considering that these works are the largest and we believe the most costly in the world, and that the machinery was all made in San Francisco, and the stockholders are Californians, who not having time to go to the Islands may wish to see a pictorial representation of the property which they created, the recommendation is absurd.

RETAILERS' CORNER.

The week has been decidedly dull. There is no business doing at all. The only trade at present is the supplying of the most urgent wants. We may expect this condition of affairs to last till after the opening of the new year, when the reaction will come. At present retailers abstain from buying, in order to have light stocks at the annual stock-taking. At this time next week our jobbers will have commenced taking stock. Collections yesterday were large, as there is only one more collection day this year, and accounts are being settled up to start fresh with the new year.

SUGAR.

The local demand for Refined Sugar is very fair for the season, but grocery grades are very dull. In New York the market is very dull, and the demand is very limited, with slightly shaded prices.

COFFEE.

The stock of Central American Coffee in first hands does not exceed 4000 bags. There will be little demand during this month, and on the 1st of January the stock will probably not be over 3000 bags. If we have the usual rush of sorting-up orders in the early part of January that we may expect, this stock will be entirely absorbed two or three weeks before the new crop arrives. That generally occurs some time in February, and this year on account of the bareness of the market, we may expect arrivals earlier than usual, but still the market is bound to be bare for a time at least. Consumption won't stop, however much stocks may be reduced; and though dealers may keep stocks as low as possible, they must supply actual wants. The New York market is very weak, and constantly declining under unfavorable advices from Brazil and Europe, increasing supplies, and a further decline of values at the Exchange. Sellers have been ready to accept bids on the basis of 12¼ cents for fair, but with the present feeling it would be hard to sell on a basis of 12 cents. The important features of the Rio cables received since our last issue have been increased receipts, the average last week being about 15,000 bags, and for the first two days of this week 12,000 do.; light purchases for this country and Europe, so that the stocks have accumulated to the extent of 335,000 bags, and although official quotations are unchanged, they are called nominal, nee it has been easier to buy there and the tendency has been lower.

RICE.

The local market, both for Hawaiian and Asiatic, has been very dull during the week, but prices are well maintained and holders will not make any concessions. In China, especially, freights have advanced as the Rice cannot be replaced at present prices. In the East the market for Carolina Rice is dull, and though stocks of cleaned are not large, yet they are more than enough for present requirements.

CANNED GOODS.

The local market for Canned Goods is extremely dull; brokers are sitting in their offices whistling for trade, which does not come, and they could very well take a couple of weeks holiday without hurting their incomes. Salmon stocks are well reduced, and we may expect to see the market bare by the commencement of the packing season. The Eastern Canned Goods trade is very dull, but prices have become so low that dealers feel confident that they have touched bedrock and cannot decline any more; so they are taking heart and expect an advance as soon as spring trade opens. In St. Louis California goods are moving well.

DRIED FRUITS.

The market as a whole is somewhat weaker. Domestic Dried Fruits are inactive, and Foreign Dried but little better. Receipts of Apples were small and prices weak. Evaporated are receiving some attention on account of the low price at which they are selling.

THE HAWAIIAN TREATY.

Report of the Secretary of the Treasury Upon It.

In the telegraphic report of the official documents submitted to Congress, the following comments of the Secretary of the Treasury on the Hawaiian Treaty—a subject of considerable interest to California—seems to have been overlooked.

FOLGER'S REPORT.

Charges of fraud and irregularity in the administration of the law enacted to carry out the treaty with Hawaii, so far as concerns the exemption of sugars from duty, having been made both in public bodies and in the public prints, I appointed a commission of three trustworthy persons (one of whom was nominated by prominent representatives of the sugar trade in New York) to go to San Francisco and Portland, Oregon, and, if necessary, to the Hawaiian Islands, to fully investigate the matter. They were given the fullest latitude to examine into all branches of the subject, and have executed the commission with intelligence, fidelity and thoroughness.

The report, which will be duly transmitted to Congress, fails to show that such charges have any foundation. It tends strongly to prove that the character of the sugar imported from these islands since the treaty went into operation is essentially the same as that which was imported prior to the treaty, both as regards the grade of sugar admitted and its country of origin; and that the treaty has been fairly executed. The statement in the report that the sugar interest is largely other than American has called forth from the Hawaiian Government a counter statement with a table showing that of $15,886,800 of assessed plantation property, over $10,000,000 is owned by American citizens. This large interest, it is claimed, is growth from the treaty, and that it is profitable to the owners, many of whom are residents in this country.

The industry and free market opened have given rise to a trade, in its nature and effects like our inter-State trade, covering a wide range of articles affecting profitably the American farmer, grocer and manufacturer of small articles of household and farm use, as well as the larger manufacturers in metals, and of machinery and cotton. The exports in these commodities have so grown that the trade of San Francisco with the Hawaiian Islands is its third in importance, being equaled only by that with Great Britain and China, and exceeding that of Mexico, Australia, or British Columbia. Many of the articles of this trade, such as hay, grain, lumber, etc., are so bulky that they employ a shipping large in proportion to their value, and much of this is American."

The impetus given to Hawaiian interisland commerce has also inured to the benefit of Americans, in calling for coasting steamers and sailing vessels, which have been built in American ports.

The balance of trade growing from the earnings of American commerce—the commissions of merchants and bankers, and the profits of American citizens—is believed to be in favor of this country; as the course of exchange, as this department is informed, is constantly against the Hawaiian remitter to the extent of from 1½ to 2 per cent. To reconcile this with the statements of the values of exports from this country to Hawaii, and of the imports into this country from that, which show an excess of imports, the fact must be weighed that the commodities landed there from here have an added value when they reach there, from the cost of carriage which adheres to them. The carriage is by American vessels mostly, and the cost of carriage earned by our citizens should be put to that side of the account.

The report of the Commission shows that but for the free entry awarded by the treaty, the revenue on the sugar imported would have been about $3,000,000, computed at an average duty of $3.18 per 100 pounds. Yet there is a countervailing benefit to our citizens. The increase in value of Hawaiian sugar has been but $1.57 per 100 pounds. As the sugar comes in free it may not have been as strictly classified as that on which duty is assessed. That the consumer has received some benefit is thus shown, and this notion is confirmed by the market price of sugar in San Francisco before and since the treaty, being an average of 1½ cents per pound in favor of the consumer since the treaty. Thus the loss in revenue is on a trade which might not exist but for this beneficent operation of the treaty.

"Number of vessels built in United States Pacific ports for coasting trade of the islands; Sailing vessels, 25; steamers, 11; built in Atlantic ports for coasting, 1 steamer, of 1,000 tons; built in Atlantic ports for ocean service between San Francisco and Honolulu, 2 steamers, each 3,000 tons.

That some American editors do not understand that the old common law, and not codified or statute law, prevails in trials for murder and similar crimes in England. And, moreover, that from time immemorial, say a thousand years, it has been the custom in England for the presiding judge to comment on the credibility of witnesses and the value of the testimony for or against the defendant. Something like this, but in a less pronounced form, may be seen in our own United States Courts, in which English common law prevails, only modified by the practice act of the State in which the Court is sitting. As for removing the convict O'Donnell to London for trial, the offense with which he was charged was committed on the high seas, and not in waters under colonial jurisdiction. We have no doubt that O'Donnell had a fair trial, but some of his countrymen by their violence in speech and publication have done their best to inflame the minds of the British against him and all who sympathize with his and similar crimes.

TOBACCO MARKETS.

SAN FRANCISCO—Havana Leaf of '82 is commencing to arrive, and what has been opened is in good order, fine condition and of excellent quality, and bids fair to exceed any receipts we have had for years. Sumatra is quite active, and '82 is going off freely. The little '81 in first hands is held at stiff figures. Domestic '82 is turning out all that was anticipated, but manufacturers, knowing there is plenty of that leaf, both wrapper and filler, are paying more attention for the moment to Sumatra, expecting an advance.

Cigar manufacturers are fairly busy, and, allowing for the holidays this week, will probably draw the full average of revenue stamps.

The trade in manufactured tobacco has settled down to the usual December dullness, a mere sorting-up and hand-to-mouth business. The larger dealers do not complain of any reduction in the volume of business; indeed, with many it has somewhat increased, but competition has cut down the profits to the meagrest percentage.

The injunction suit and application for a receiver in the matter of the Seal Rock Company again went over last Friday until to-morrow, on the request of the plaintiff. It is an outrage on justice that an injunction granted on ex-parte statements should be allowed to stand, to the depreciation of the property and detriment of the interests of all concerned, when the petitioner on his own admission is not ready to prove his allegations

We publish below a letter which Mr. Herman Heyneman has received from the representative wholesale trade of this coast. It is a letter of which any business man may justly feel proud:

SAN FRANCISCO, Dec. 1, 1883

MR. HERMAN HEYNEMAN, City.

Dear Sir:—We understand that you are about to go East for the purpose of procuring agencies for the sale of goods and merchandise in our line of trade.

Please accept our assurances that we will assist you in the sale of such goods in every way possible. Yours truly,

[U. S. Tobacco Journal]

NEW YORK, Dec. 1st.—Business in seed leaf in the market is almost at a standstill. Now and then there is a demand for something large, leafy, silky, glossy, fine-burning and fine smelling, for which the inquirer would be rash enough to pay 35 cents, but as there is very little in the street that only half-way meets the exaggerated views of buyers, the demand remains a demand, and tobacco remains in the hands of dealers. There is an enormous amount of leaf in the market, of which a small amount only is fit for use for fine cigars. Manufacturers of cheap cigars never were more easily accommodated than now. Some of them, believing the cigarettes to be the mark of the tobacco millennium, cannot be urged into paying more than 8 cents for wrappers, and 4 cents for binders, and re-weight at that, not to say anything about time and suitable deduction for cash.

In cigar manufacturing circles things look blue. Most of the large manufacturers are working with half a force only, orders coming in sparingly, while the spirit of contraction in credits seems to predominate. Nevertheless no fear need be harbored by holders of good tobaccos that their sales will be difficult and without profit. There is an absolute dearth of fine grades of seed leaf, and before long our market will be alive with buyers. After all, the present dullness in the market is a probable blessing to the distracted packers, who saw in the early purchases of '83 tobaccos at enormous prices, mostly effected by large manufacturers, an insurmountable barrier to any profitable investments on their part. The dullness here has withdrawn a large number of would-be purchasers from the tobacco fields, and prices are beginning to be more reasonable. Operations on an extensive scale will likely not set in in any of the tobacco-growing regions before January next, when it is expected prices will be low and farmers in a commercially pliable mood.

JOBBERS' PRICES.

DECEMBER 14..... 1883

The following Prices are those at which city and country Retail Grocers can buy in lots to suit their trade and are corrected weekly.

Staple Groceries.

SUGAR.

California Sugar Refinery.

Charles Lux says, for valleys where good feed can be had all the year round, the Durham is the best strain to improve your cattle; but for hill pastures, the superior agility of the Hereford may give that breed the advantage, and Lux ought to know what is what, when he talks of beef cattle.

The Merino as a Mutton Sheep.

There is a great deal being said nowadays about the value of Merino sheep for mutton. Nobody claims that the breed is especially adapted to making mutton. It is preeminently a wool breed, but a writer of experience truly says that the finer and denser the wool, the finer the fibre of the mutton. The little Welch sheep, which bears the finest fleece of any sheep in the world, makes mutton that many are willing to pay several cents a pound more for than for larger breeds.

Still, in mutton-eating England the chop and legs from Merinos are quoted in the markets about 3 cents per pound, dressed weight, less than the favorite Downs. In England mutton is a favorite meat on the dinner table, and epicures are very particular about having the large English breeds that are peculiarly adapted for mutton production. If, therefore, we are to raise mutton for English markets, these facts are not to be ignored, but we do not need to send our Merino carcasses to England. We had better keep them at home, where they serve as good a purpose, as far as they go, as the large mutton breeds. What we need to do is to utilize what we have on hand. In the great wool growing districts of the South and West, particularly, raisers are largely of the opinion that it is of no use to think of realizing anything from the mutton of their sheep. But we want to impress upon their minds is that this idea is wrong. It is of great importance for wool growers to understand that it is feed more than breed that cuts the figure in the mutton market. The Merino sheep will not weigh out much more than half as much mutton as the Oxfords, Lincolns, Cotswolds, or even Southdowns and Shropshires, but how about the wool? The big and medium breeds, which excel as mutton sheep, also turn off a great deal of wool; but their specialty is mutton. The wool can be taken from a sheep's back every year; the mutton crop comes but once. For sheep ranching and herding in large flocks, the Merino is unquestionably the sheep. Farmers who grow the crack mutton sheep don't throw away their wool; but growers of Merino wool have largely heretofore thrown away their mutton. They should not do it any longer. Merino mutton is good.—*Chicago Drovers' Journal.*

A State register of pure blood sheep would help to keep our most valued strains pure, and would insure careful breeders legitim ate and deserved returns.

Jos. M. Wade, of Boston, writes to the *Wool Grower*: "I am told by an old manufacturer who is a large buyer of Texas wool, that during the present season fall wool has actually cost him from 50 to 55 cents clean, and that two lives months' growth has cost from 60 to 68 cents; this he has learned by a long series of actual tests in shrinking.

Some of the short fall wools are reported as shrinking all of 70 per cent., much of which is fine gravel, the result of carelessly sweeping the ground on which the sheep were clipped. This is an excellent way for growers to get a reputation, but unfortunately it will be poor.

The Australian wool trade may give us a lesson on the tariff reduction that we have not yet learned. Some of the wool bought is already on its way to this country. It is believed that nearly, if not quite, 200,000 bales will be purchased, which will average 400 pounds to the bale, and give an average shrinkage of about 52 per cent. It will not take much of a mathematician to figure out the effects of so much fine wool brought into a country that was about ready to grow every pound of wool necessary for its own consumption.

Protecting Wool.

Statesmen have considered the wool tariff as the best example of the benefits of protection; it is a support that costs the country least, produces a good revenue, and is paid by the wealthier classes wearing the best goods; it increases the supply of mutton, the cheapest food for the millions.

As wool growers we must follow the manufacturers, yet stand against them: our products are sold through their hands. When they advocate free wool we must advocate free goods; when they can compete with foreign nations using free wools, by using free wools, then we must submit, but until that time our protection must be the same. A high rate on wool than on the goods would result on wool growers in depression of business. A higher rate (comparatively) on goods would place prices of goods too much in the hands of the factory owners and react on the people. The subject, therefore, requires a proper adjustment of duties, that home industries be support d without the people paying a price that would not be justified by the general good to the country, and we hold that manufacturers and growers in any section are entitled to the same consideration, and that the people's interests are served by the independence of the country of any foreign ring or markets.

We believe that several changes must take place before fine wools can be produced in this country without a tariff, and those changes are surely coming to pass. Our population is becoming more dense and markets are getting closer, railroads are reaching all over the country, causing competition to lower freights, taxes are being gradually reduced, and as a consequence money is having greater purchasing power, and wool, too, is correspondingly lower. It is expected that wool will go lower until our prices are such as will compare even with the markets now competing and paying a duty, but it is not expected that the support now extended wool growing will be taken away while any protective duties remain, and exact justice to the industry demands that the old rates be restored.—*Texas Wool Grower.*

That the *Record-Union* is not, at heart in accord with the great majority of people in this State on the Chinese question.

Short Staple.

The next California Legislature should enact a good acab law for the protection of owners who have well-cared for and valuable flocks, from disease introduced and fostered by the carelessness of improvident neighbors. How would the Texas law, with modifications suggested by our varying circumstances, answer?

THE WOOL MARKET.

The local wool market has been decidedly quiet this week; some houses have hardly sold a bale and the others have done but a small business. Holders, however, are firm in asking prices as quoted below. The stock in speculative hands here does not justify any reduction in values.

The latest telegram from New York dated yesterday says:

Wool steady Spring fine, 22@28c ℔ lb; Burry, 10@13c; Pulled, 28@40c; Fall Clip, 15@20c; Burry, 9@10c.

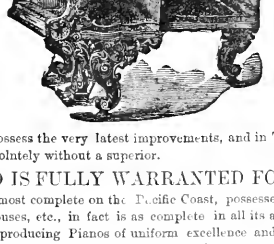
CALIFORNIA Piano Manufacturing Co.

INCORPORATED UNDER THE LAWS OF CALIFORNIA, MARCH 8, 1882.

Manufacturers of Strictly First Class

UPRIGHT PIANOS

Factory, 431 and 433 Fourth St., corner of Bryant.
Old Kimball Carriage Factory.



Salesroom, 30 New Montgomery St., under Palace Hotel.

Our instruments possess the very latest improvements, and in TONE, TOUCH DURABILITY are absolutely without a superior.

EVERY PIANO IS FULLY WARRANTED FOR 5 YEARS

Our factory is the most complete on the Pacific Coast, possesses every kind of chinery, steam, dry houses, etc., in fact is as complete in all its appointments as Eastern establishment, producing Pianos of uniform excellence and durability. An amination of our Piano-Fortes is earnestly solicited. Catalogues and full descrip mailed on application.

VOL. XI, NO. 11. SAN FRANCISCO, DECEMBER 21, 1883. PRICE TEN CENTS

The Movement for a National Bankrupt Law.

The call sent out some time ago by the New York Board of Trade and Transportation for a convention of business men at Washington next January, for the purpose of urging upon Congress the enactment of a national bankrupt law, has received a favorable response from sixty-five different organizations in various parts of the country. This is a cheering indication of the interest which has been awkened in the subject; and the fact that a good many of the responses are from points in the West and South shows that the proposed gathering will have, as it should have, a national character. It was wise and fitting that the Boston BankPresidents' Association's recent dinner should take up this subject for discussion, and it was fortunate that a majority of the Massachusetts delegation in Congress were present and expressed themselves strongly in favor of the proposed law. The Lowell bill is generally accepted by all who really desire practical and efficient legislation, as the best form upon which to concentrate the active support of the business community. Such imperfections as may be thought to exist in it, or such as may be developed in it when it is subjected to the test of the enforcement, may be easily reached by amendments; the main thing is to find a bill on which substantial agreement may be reached, and such a bill the Lowell draft certainly is. The discussion at the Bank Presidents' dinner could scarcely be called a discussion, so harmonious were the views expressed. The question when looked at from an honorable business point of view has actually but one side to it. The present confusion and conflict of bankrupt laws in the several States works to the advantage of none but those who have some trickery to accomplish.

We are not sure that there is suy greater boon which could come to the business interests of the country from legislation than the enactment of a just and uniform bankrupt law. All business relations are unsettled by the existing state of things. Debtors suffer as well as creditors, because at the first sign of anything wrong, some creditor, anxious to make himself whole, whatever may come to the rest, crowds the debtor to the wall. Credit is made more difficult to obtain, because creditors at s distance are aware of the disadvantage which they are put by most State laws in endeavoring to enforce their claims. Confidence is weakened, distrust promoted, and depression indefinitely prolonged in consequence. The adoption of a national bankruptcy law, just in its bearing upon debtor and creditor, would do more than any one thing to strengthen the stability of business relations. We are one country. State lines count for nothing in business intercourse, and they should count for nothing in altering the conditions of business responsibility, If the business interests throughout the country make it clear that they regard a national bankruptcy law as essential, it is scarcely possible that Congress will fail to enact such lnaw.—*New England Grocer.*

TRADE FICTIONS.

The *Grocer and Canner* of this city has an article on trade fiction and after noticing the well-known frauds in groceries, says:

One of the most flagrant instances of trade frauds being perpetrated to-day, is that one which is trying to make a market for California wines, not on their merits, but by dressing them up in French labels. This is inflicting a great injury upon the wine-growing interest of the country, as it is withdrawing our product from a position in which it would soon receive public recognition of its merits; while as it is, it is not enhancing their merits one whit. There is no question but that a doctoring process is being conducted to a large extent in France.

It is a well-known fact that for several years, while the production of French wine has been constantly falling off, its exportation has been continually increasing. It is as easy to-day to obtain well-known brands of French clarets, ostensibly, as it was ten or fifteen years since. While French wines have been retrograding California wines have been steadily improving in quality, and it is only requisite to establish the excellence of our vintage, that it should go out to consumers under its own name. It can challenge comparison with the better of the French clarets of the present day without fear, and is so superior to the great bulk of the doctored stuff which finds its way here from that country, that with a fair chance, it cannot fail to win the approval of consumers throughout the country. If our people express a preference for adulterated, mixed and spurious wines, and prefer to pay therefore double price—one for the wine and one for the French label—rather than have a pure article of California vintage, which is of superior flavor, and only one-half the cost, they certainly have a right to the exercise of that preference, and will have no difficulty in gratifying it, as they will find an abundance of dealers who will gladly supply them. Consumers should, on their own behalf, demand pure wines honestly named, and thus doctoring and selling of wines under fictitious labels would soon be numbered among the dying and dead industries. A patronage thus rendered to home production would also put California vintners upon their mettal, which would do much toward increasing the wonderful excellence our vintage has already attained, though beset with obstacles and prejudices on every hand.

"Is that gentleman a friend of yours?" asked a newly introduced lady of another at a reception. "Oh no, he's my husband," wss the reply.

American Oysters at the Fisheries Exhibition.

A curious instance of what want of appreciation of the value of new methods and appliances which is supposed to be characteristic of the English mind is given in the article on the oyster exhibit at the London Fisheries Exhibition in the August number of *Nature*. While over two columns are devoted to the advances made in Europe in oyster culture, scientific and practical, less than one-third of a column is occupied by a brief and inaccurate summary of the American exhibit and the present condition of the oyster question in the United States. Surely an exhibit the catalogue of which requires nearly twenty pages octavo merits a more extensive notice. Aside from the fact that it illustrates one of the most extensive and valuable fisheries in the world, the exhibit bears conclusive testimony to the advanced position occupied by Americans, who the ras scientific investigations or practical oyster culturists. The former have already determined such questions as the following: The sex of the oyster; the age at which it can reproduce its species; the effect of temperature upon reproduction and development; the influence of currents, the method of reproduction and fixation, the manner of formation of beds and the conditions necessary to their successful existence, many of which, according to *Nature*, are yet undetermined in Europe. As nearly all these points are shown in one way or another by the exhibit, the assertion of the English periodical that the North Islands department is the only one in which the scientific side comes to the front seems hardly just. The total failure to recognize the value of the labors of the practical oysterman in advancing oyster culture is no less surprising than the meager notice of the contributions of American scientific investigators. That the apparatus for canning and packing oysters and transporting them long distances, and the improvements in appliances for prosecuting the fishery, culminating in the steam dredging vessels, should escape all notice is astonishing; but when it is remembered that within the last ten years, through the exertions of practical men, the Connecticut oyster interest has expanded from the fishery of a few insignificant oyster beds to the systematic cultivation of nearly 100,000 acres of hitherto barren and unproductive bottoms, and that in place of a yield of native oysters to the annual rable to deserve notice, the oyster men of the state now breed hundreds of thousands of bushels it would seem as though a study of the causes which brought about such desirable results would have been more profitable and interesting than the enumeration of a few curious instances of oyster production or the abnormal circumstances with which *Nature* has favored its readers. *Bradstreet's*

SOME HINTS.

The editor of the *German American Grocer*, New York, did a heap of thinking on Thanksgiving day. Here are some of his thoughts:

That the social feeling existing among the retail grocers might steadily grow.

That the influence of the Grocers' Union spread itself till every grocer in the city has become a member thereof.

That a system be established which will protect retailers from bad customers.

That a standard for weights and measures be established by which all produce can be bought and sold.

That the present adulteration law be so amended that the guilty manufacturers, instead of innocent retailers, be punished.

That sugar be sold at a profit.

That all short ture should be allowed for.

That no manufacturers or wholesalers sell directly to consumers.

To which the MERCHANT would add: That every grocer should count, measure, weigh and gauge all the merchandise he receives and compare it with his invoice, and then check the arithmetic of the sellers clerk!

THE WINE PRESS AND THE CELLAR.

BY P. H. RIXFORD.

For particulars see advertisement in another column.

What in Lorraine is called Pinean Noir, is named on the Rhine, Clavner, Klebroth and Aszmannshauser, in Southern Germany the same variety is known as Black Riesling, Suszroth, Suszeled, Mohrchen, Red and Black Burgundy.

The grape of this variety known in California by the latter name or Pinot, is said to produce on the Rhine and chiefly in the Ahr valley a red wine which as to bouquet and alcoholic power and color may equal the best in Burgundy of that grape. Red wines, the *Weinbote* of Frier asserts are becoming more and more popular with German consumers, France not being equal to the occasion as to the quality desired, the production in Germany of these wines is increasing considerably and the Pinot is recommended for planting as a good variety. The same paper expresses its opinion regarding Riesling that not an inch of soil proper for the production of the same should be given over to that of the Pinot, but consider the heavy positions now growing Kleinberger to be more profitably dedicated to Pinot, and in general to select low locations with heavy soil for the red grape or hill-lands with loam, improper for Reisling cultivation

The Pinot has different sub-varieties, but the differences among them are chiefly visible in the wood, the leaf, and growth of the vines, and less in the grapes.

The Rulander and its gray grape and the white Burgundy of the Rhine are said to be near relations of the black Burgundy, and the three vines mature their fruit at the same time.

Dr. Adolf Blankenhorn in the viticultural paper, *Der Weinbau*, invites American grape-growers to send him to Blankenhornsburg, Germany, printed and written communications and publications relative to new experiments and results with grape-seedlings. The professor intends residing at the vineyard, in order to attend to the many interesting investigations of subjects scientifically connected with the nurseries at the property. To obtain as many items as possible about seedlings, he begs all interested in questions os propagating the vine, to furnish him with their experiences with seedlings, and their fruit. He finds it strange that in the periodical literature and the newest viticultural books nothing treating the seedling duestion is contained, and in the literature of America there is the same blank. Dr. Blankenhorn invites especially German-American grape-growers to communicate their recent experiendes, thereby rendering their old fatherland a service, for he foresees the prohibition of importation of cuttings before long.

A PEST DESTROYER.

A Los Angeles contemporary says: "Mr. J. De Barth Shorb, the well known orange grower and President of the San Gabriel Wine Company, thinks he has discovered a remedy for the phylloxera and red-scale bugs. He has filed a caveat at the Patent Office for a patent to his invention, which consists of a large glass cylinder filled with bi-chloride of mercury, which is inverted on the end of a root of the vine or tree infected, which root is cut off and inserted in the mouth of the cylinder. The root absorbs the liquid, which is carried upward in the veins of the tree, coming out through the pores of the bark and leaves, killing the larvæ of the insect pest mentioned." The southern counties have not hitherto suffered from phylloxera, the insect and its ravages being unknown to their vineyard men, except from examining specimens brought from other counties; but the red-scale bug has damaged the orange crop of some localities and threatens more serious disaster.

The Cloverdale *Sentinel* is doing good in pointing out that wine producers themselves pay too little attention to the popularizing of California wines as a daily table beverage.

PERSONAL.—The following well known wine makers and viticulturists have been in this city this week: Jacob Schram, Charles Krug and J. L. Beringer, of St. Helena; I. De Turk, of Santa Rosa; George West, of Stockton; Col. Geo. F. Hooper and W. McP. Hill, of Sonoma, J. H. Carroll, of Sacramento; besides R. B. Blowers, the known raisin producer of Yolo, and Dr. J. D. B. Stillman, of Lugonia.

VITICULTURAL.

Meeting of the Board of State Viticultural Commissioners.

The Board of State Viticultural Commissioners held their semi-annual meeting yesterday at 11 A. M., President Arpad Haraszthy presiding. Present, Commissioners Wetmore, Krug, De Turk, Blowers, West and the secretary, J. H. Wheeler. The Committee on vine pests and diseases of the vines reported an extensive loss in last year's crop, owing mostly to cuniure, which disease is attributed to the effects of the hot north wind—especially inland sections. It had affected badly nearly all sections subject to the north wind—especially inland sections. It had affected some varieties more than others. For instance, the Frauken and Johannisberg Riesling, together with the Malvoisie, were affected more than others.

The committee on horticulture was discharged. The committee on instructions for the office of the chief executive viticultural officer instructed said officer to announce that in connection with the next viticultural convention there will be held a special exhibition and convention for raisin makers and growers.

President Haraszthy called attention to the necessity of legislation to protect both producers and consumers against the practice of selling native wines under foreign labels, and, upon motion, the following were appointed a special committee to enter into communication with the Congressional delegation from this state, viz., Messrs. Haraszthy, Wetmore and De Turk. In discussing this subject, most of the members present assented to a suggestion to this effect, i. e., that the machinery of the internal revenue service should be utilized to protect the public against imposition and high

"THE WINE PRESS AND THE CELLAR."

A MANUAL FOR THE WINE MAKER AND THE CELLARMAN

A Few Press Notices.

[ST. HELENA STAR.]

"A glance through it discloses a vast amount of interesting information about wine-making, both in this country and in Europe * * * This is a subject on which our people should be especially informed, and we trust that the author's efforts in that direction may meet with liberal encouragement."

[PACIFIC RURAL PRESS.]

"Mr Rixford has made a very careful study and comparison of all means and methods described in the many good French works on wine-making, and has prepared a book which is a model of concise statement, very comprehensive in its scope, and still so skillfully condensed that the book is compact and concentrated, which is the secret of success in a manual. Mr. Rixford's book will supply a lack which the recent extension of the grape interest has made very great and will do much service in the advancement of the industry in this State."

Letter to the author from E. J. Wickson, Esq., editor of the *Pacific Rural Press* and Secretary of the State Horticultural Society:

"CALIFORNIA STATE HORTICULTURAL SOCIETY,
Secretary's Office.
SAN FRANCISCO, September 29, 1883.

E. H. RIXFORD, Esq.—*Dear Sir.* I have been much interested in a careful perusal of your manual, "The Wine Press and the Cellar,' and am pleased to announce that I find it exceedingly valuable as a source of information on practical wine-making. It seems to me a model of explicit statement and intelligent condensation. Certainly there is nothing in the English language which can be at all compared with it as a guide to the most correct and successful practice with the juice of the grape, from the vat to the bottle. The publication will be of invaluable benefit to the wine interest of the State.

Very truly yours,
E. J. WICKSON, Secretary.

SAN FRANCISCO MERCHANT, SEPT 13, 1883.

THE WINE PRESS AND THE CELLAR.—E. H. Rixford, a lawyer of this city, who like many of his profession has engaged in viticulture and takes a deep interest in the industry, has laid on our table a book of 240 pages with the above title. It shows unfatiguable labor and judgment on the author's part. While studying the works of other authors, mostly French, for his own instruction, he has compiled this brochure for the benefit of other young wine-makers There is probably nothing in it absolutely new or unknown to our older wine growers, but it will be a very useful manual for the vineyards's making wine for the first time, as it furnishes information in a handy form on matters simple enough when once learned, but which would bother a tyro if he had no near neighbor of more experience than himself to whom he could apply for a solution of his difficulties. We cordially recommend Mr. Rixford's work to all beginners. In the preface the author gives a short history of California Viticulture during the last seven years. The book is illustrated with 42 wood cuts and has an index for readier reference.

CRAPEVINE

CUTTINGS AND ROOTINGS.

THE FINEST FOREIGN VARIETIES FOR WINES, table use, brandy making and raisins from the Verba Buena Vineyard and Nursery, Santa Clara Co.; MATARO, CABERNET, GRENACHE, CHAUCHE-NOIR, CHARBONO and etc., warranted true to name and are passed through a disinfectant or wash before leaving the place. Fine varieties being scarce and in great demand this season, it is advisable to order early. Apply or address P. O. BURNS, proprietor, box 1193, San Jose, Cal.

prices by requiring that all wines sold in this country under any name or brand indicating a foreign origin should bear a stamp representing the full amount of the duty on imported wines. The same requirement should be applied to mixed, foreign and native wines.

Attention was also called to the legislation demanded by the board last year, and Messrs. West, Krug and Wetmore were appointed a committee to modify the same according to the present circumstances, and more especially to assert in the name of the legitimate producers of pure brandy that the government should not attempt to levy a tax on spirits that were not offered for sale or consumption; that the government had no right to claim revenue from products that were producing no revenue to the producers, and that no tax should be levied until the spirits were withdrawn from bond to be offered for sale. And, moreover, that the government was responsible for a large share of the evil effects of spirit drinking, by forcing producers to sell their goods before they were properly matured. Full particulars of the proposed laws will be given to the public soon.

Mr. Wetmore made an extended statement, showing the policy that should be pursued in this state by the vine-growers towards the hotels, restaurants and saloons, which persistently defraud their consumers. He advocated a vigorous organization to boycott all hotels, restaurants and saloons which undertake to sell California products under false labels and which overcharge the consumers. As chief executive officer, he submitted to the board the advance proofs of his annual report, in the form of appendices, preceding the report proper, which is not yet ready for print. These appendices are printed in separate illustrated pamphlets and will soon be ready for free distribution:

Appendix I.—Culture of the vine en chaintres (in chains), by A. Vias, instructor at Chassay. Translated from the French by Miss Annie Louise Wetmore. This is a treatise describing a system of pruning as yet comparatively new in California, but one extensively practiced in the department of Loir et Cher, in France, in which place the system combines many advantages over the ordinary systems, in conducing to the following important principles:

First—the vigor, longevity and fertility of the vine, increased in proportion to the development of its arborescence.

Second—The quality of the fruit decreases sensibly in proportion to its elevation from the level of the ground.

Third—The revenue of the vine-grower increases in direct proportion to the economy realized in hand labor, in fertilizing and accessory expenses.

It is by virtue of these principles that chaintre culture is now extolled in view of arresting the terrible plague which seems to mock the efforts made by science to put an end to its devastations. It is, therefore, believed necessary in this work, to devote a chapter to its excellence in assisting to combat the phylloxera.

Appendix II.—This is also a translation from the French, entitled, "Practical Manual of Pruning, as practiced near Bordeaux," which illustrates and discusses about all of the systems known and is especially devoted to the Cazenave and Guyot systems of training vines on trellises.

Appendix III.—Entitled, "Different Methods of Grafting the Vine," translated from the French work of Aime Champin, by John H. Wheeler, the secretary of the board. This work describes and illustrates fifty-one different methods of grafting, comprising in its numbers about all known methods.

These appendices are to supplement the report of the chief executive viticultural officer, who will review these methods and add others applicable to California culture.

The commission adjourned to the examination of sous instructive samples of wine—Johannisberg and Orleans Riesling blended, and Zinfandel, pure from the Orleans-Hill vineyards of Arpad Haraszthy & Co.; also a fine new Cuvee of extra-dry California natural champagne. There was a dry Zinfandel of good quality and fine quality from the Cajon Valley in San Diego County. J. J. Ayres of Mission San Jose sent in samples of Folle Blanche of vintage '82 and '83.

Olive Culture in San Diego County.

EDITOR MERCHANT: The movement on various sides to take advantage of possibilities of San Diego County for the production of fruit must be hailed with the pleasure of patriotism on the part of every Californian. Those possibilities are certainties. Witness the specimens of fruit on exhibition now for six weeks at the office of the Viticultural Commission on Leidesdorff street, where such fruit produced on lands neighboring the Cajon property, can be raised without irrigation, no doubts need be harbored any longer. Not for the purpose of extolling the Cajon colonization company, but in order to express my personal gratification at the carrying into effect the desires of many, on the part of the gentlemen who have taken the matter in hands, I wish to say a few words on the subject. Your readers will have followed the matter of olive growing, frequently advocated in your columns. There is an awakening to the fact of that cultivation being a necessity or rather that to neglect it would be unwise. Mr. Frank A. Kimball, of National City, San Diego County, wrote a short time ago that over 400 letters, all inquiring about olive-growing had of late been sent him and replied to. This is undoubtedly a proof that people in California are not indifferent to good advice. A few branches of the olives sent by Mr Kimball, not for show, but for the purpose of identifying and obtaining opinions on the same from Spain, give absolute proof of the excellent circumstances existing in San Diego County for the prosperity of that tree. Olives arrived at maturity in the first days of December together with a number near that stage to the number of sixteen on one ship not over twelve inches long, must dispel any doubt about success obtainable in San Diego County. The olives in Leidesdorff Street were gathered five weeks earlier, before attaining their maturity, and their present shrivelled aspect cannot testify so eloquently as what people can see on the spot now. There has been always the persuasion of great chances for the cultivation of the olive in San Diego County, and it needed hardly the testimony of the fruit of Mr. Kimball's, to awake in the writer the desire to partake of the benefits of the Cajon Company. The names and belief of the men who have taken the initiative in that Company were sufficient for me to take an interest in it. Mr. Wetmore's energetic action is sure to carry life into the enterprise. Mr. George West and Mr. Blowers, examining the estate of the Cajon Company, find their belief in the success with grape growing for raising there fully confirmed, and for the sake of that product, alone, which will in a few years return the investment, can advise participation with clear conscience, even if that were the only product. Olive planting will pay just as well in the Cajon lands; this is my firm persuasion. The prospect of rendering guava a California product in the Cajon lands and that a very remunerative one, is certainly very satisfactory, as thereby a new rural industry will be added.

It will surprise every one to see at the Leidesdorff Street office a number of varieties of apples and pears of perfect shape and in taste equal to any produced in latitudes presumably more favorable to the growth of those fruits, produced where the orange and lemon grow luxuriantly, as the San Diego specimens of the latter confirm.

In your last issue you announced the example of the Cajon Company, followed by the purchase on the part of a San Francisco gentleman of another San Diego property. May that property soon bear witness of that gentleman having followed the inspiration of others in setting out many an acre of olive trees.

It seems to me a unique opportunity for small settlers and people of a small capital to invest with absolute certainty in the Cajon Company, as a small tract, if properly managed, will yield a sure income. The names of the practical men who are the directors are a guarantee for honest dealing in this enterprise, distinct from the speculative operations by which people too often have been victimized. The owner of a tract of land may cultivate it at his pleasure, or several clubbing together may plant it by a common deputy, thus having in a few years a property the value of which cannot bnt be a rising one. RIVALRY IN RIPARIAS.

NAPA VALLEY NURSERY AND ORCHARD,
NAPA CITY, Cal., Dec. 15, 1883.

ED. MERCHANT: We notice the advertisement of C. A. Wetmore, on Page 148 of this week's MERCHANT. While we admit that Mr. Wetmore is perfectly justified in reducing the price of his Riparia cuttings from $10 (last week's adv.) to $7.50, the price at which, we would like to call attention to the fact that his statement, "This is the cheapest lot of Riparia cuttings ever offered in California" is not true, as our advertisement has appeared some weeks, offering Riparia cuttings from $4.50 to $7.50, according to size, as he well knows, for he wrote us last week regretting that he had not known sooner that so many Riparia cuttings could be obtained here, (we have about 300,000) or he would not have purchased so many in the East.

While, further, we are fully aware of the public good Mr. Wetmore is to the viticultural interests of the State, we protest against his using the position he occupies to misrepresent, and, in short, to "ride rough shod" over any who may seem to be in his way.

We would also say that our cuttings are being made fresh from the vineyard of Judge Jas. A. Stanly, (of Stanly, Storey and Hayes, N. W. Cor. Clay and Montgomery streets, S. F.) being heeled in every day, and that we can refer to Hon. M. M. Estee, Prof. E. W. Hilgard and others.

Prof. Hilgard visited this vineyard in company with Leonard Coates, and after close examination, expressed himself as being "agreably disappointed" in the growth the Riparias had made, being planted on a hill-side, and in hard, cold soil. The wood is much shorter jointed, and better ripened, than that which is imported, and of course, must be superior.

Respectfully,

COATES & TOOL.

Competition.

Competion is not to be avoided. When it is healthful and just, it is not desirable that it should be. Its aggregate constitutes the wealth of a land, and its wholsome and stimulating operation promotes the prosperity of the multitudes who are not directly engaged in the circle of its contest. But it creates frequent and great perplexities to the individual trader, and often embarrasses and breaks down a young man of business in the beginning of his career. Frequently, also, there is great injustice perpetrated under the garb of just and equitable competition. A large trader, with abundant capital, will adopt the nature and occupation of the tiger among flocks. He will devote himself to the oppressive persecution of competitors with smaller means. He will undersell them even at a loss to himself. He will even ascertain the main staple of their investment, that he may especially destroy them by a ruinous reduction of the market price for this one class of merchandise. His purpose is no longer honorable gain to himself, but a murderous ruin to others. Such a man, while far from an advantage to the trade, is no benefit to the community in which he trades.—*U. S. Economist.*

In San Francisco we have seen something of this folly, greed, or rascality would probably be a better name for it.

SEASON OF 1884!

VINES and VINE CUTTINGS

I take pleasure in informing my patrons that I shall be able to furnish, if called for soon, limited quantities of

GENUINE CUTTINGS

Of the following rare varieties:— FOLLE BLANCHE, COLOMBAR (Sauvignon vert) MATARO, CARIGNAN, GRENACHE, PETIT PINOT (Crabb's Black Burgundy) CHAUCHE NOIR, TROUSSEAU, MEUNIER (same as the so-called Franc-Pinot of Mr. Scheffler—misnamed), CHARBONO, FOLLE NOIRE, MALBECK (same as Lefranc's so-called Cabernet-Malbeck) MOSELLE RIESLING, WEST'S WHITE PROLIFIC, MUSCAT of FRONTIGNAN, SEEDLESS SULTANA, etc.

The prices of the foregoing are capricious and some of the varieties, particularly MATARO, MALBECK, CARIGNAN, MEUNIER and WEST'S WHITE PROLIFIC, MUSCAT of FRONTIGNAN, SEEDLESS SULTANA, etc., are nearly all engaged at the present time.

Price lists will be forwarded to those inquiring, as circumstances vary them.

Also, All the Well Known Varieties

such as ZINFANDEL, RIESLING, CHASSELAS, CHAUCHE GRIS, BERGER, MUSCATS (Gordo Blanco and Alexandris) FLAME TOKAY, etc., etc.

ROOTED VINES.

Particular care will be taken in respect to rooted vines to guard against infection by diseases. I can furnish rooted ZINFANDEL, MALVOISIE, VERDAL, FEHER ZAGAS, CHARBONO, etc; at varying prices, according to the demands of different producers.

Also a few thousand CALIFORNICA SEEDLINGS; RIPARIA SEEDLINGS all engaged.

RIPARIA CUTTINGS.

Having made necessary arrangements, I am prepared until January 15th to offer fresh RIPARIA CUTTINGS from the forests of Nebraska—car load already arrived in better condition than ever before received in this State, as follows:

36 INCH CUTTINGS at $10.00 per M.
42 " " " $12.00 " "

Ten per cent off for cash within 10 days after receipt and acceptance of ordera.

For those who desire shorter lengths I will furnish

10 to 15 inch cuttings at $3.00 per M.
15 to 18 " " " $5.00 " "
18 to 20 " " " $6.00 " "

But I advise purchasers to take the long cuttings and prepare them to suit themselves. This is the cheapest offering of Riparia cuttings ever made in California.

All of these Riparia stocks not sold before January 15th will be sold at public auction to the highest bidder.

SEED.

I have fresh Riparia seed (from Nebraska) to offer at

$2.50 per lb. for less than 5 lbs.
$2.00 " " " 5 lbs. and more.

Also, Fresh Californica Seed at

$1.50 per lb. for less than 5 lbs.
$1.00 " " " 5 lbs. and more.

CIRCULARS

will soon be ready to explain the importance of certain of the rarest varieties and will be furnished on demand.

A RIVAL RIPARIAN REPLIES.

SAN FRANCISCO, Dec. 19, 1883.

EDITOR MERCHANT: The letter of Messrs. Coates & Tool which you have submitted to me for "explanation," has been duly read. I do not know what is the matter with the gentlemen; certainly, I do not intend to "shut up shop," because they have concluded to compete with me in a business that I have been engaged in for four years. They seem offended because in my advertisement I say that my offering of RIPARIAS is the cheapest ever made in this State, viz,; 36 inches at $10 per M; 42 inches at $12 per M. If this is not the cheapest offering I am willing to be corrected, and in order to make my captions competitors feel better and to quiet their fears lest I may be deceiving the public, I will now agree to sell this consignment, which I have offered at 10 per cent discount for cash within ten days from receipt and acceptance of orders. In order not to compete unnecessarily against the prices fixed by Messrs. Coates & Tool I offered to cut up my long cuttings and furnish 15 to 20 inch cuttings at $7.50—the price asked by them for similar size; inasmuch as this courtesy does not please them I will now change my offer to the advantage of the public and will furnish cuttings 10 to 15 inches long for $3.50; 15 to 18 inches long for $5.00 and 18 to 20 inches ong for $6.00 per M. My clients are therefore referred to my revised price lists and they may be well assured that I do not mean to be run out of a legitimate business by the ill-natured complaints of my competitor.

But, Mr. Editor, I think it is time that the public should understand distinctly that, the fact that I hold a public office, the duties of which I have performed without fear, favor or partiality, to the best of my ability, is no reason why I should abandon a business which I had engaged in before I was called to fill such office. I have imported for several years large quantities of resistant stocks and taken large risks in doing so; last year I lost considerable money by the operation. This is, however, a legitimate branch of a necessary business, and I feel compelled to continue it, even if at a loss, to keep pace with my competitors, against whom I have never lifted any obstacle, unless they were practicing deception or leading planters into error.

Early this year I ordered a carload of RIPARIA cuttings to be made for me in Nebraska, knowing that when made immediately after the leaves fall, the chances of success in rooting them are increased. I have to pay for them all, whether I sell them or not; I have to advance the money, which including freight is nearly two thousand dollars, and I may have a lot of them left on my hands when the season is over. If I had known that any were to be had in this State in large quantity, (I did not know Judge Stanly had not grafted his vines) I should first have ascertained what could be done here, and so I would have saved my risks. Knowing now how many there are offered, (I do not, however, believe that Messrs C. & T. can make 300,000 *good* cuttings), I am naturally anxious to get rid of my stocks without loss, and so I have made "the cheapest offering of Riparias ever made in the State." My stocks are first-class and better than any ever before imported. If I do not sell all I have, at the revised price list now published, before January 15th, I shall put up the balance on hand for sale at public auction to the highest bidder. If Messrs. Coates & Tool don't like my way of doing business, let them plead the baby act, a thing which they will never find me fool enough to do.

Yours respectfully,

CHAS. A. WETMORE.

The Tobacco Outlook.

There has nothing transpired in Congress as yet to indicate whether any action or not will be taken this session in regard to internal revenue taxation. Mr. Carlisle, it is true, has been elected to the Speakership on a platform of tariff reform. His friends interpret this to mean that no legislation will be had in the House affecting internal taxes and that the bent of the House will solely be toward lowering the customs duties.

We have claimed that the discussion of the tariff will necessarily involve a discussion of the internal revenue. We think so now, but if Mr. Carlisle's friends' declarations are to be taken as true, no other hurt will injure to the tobacco interest other than incident to agitation. The trade can stand "agitation" so long as it is assured there will be no actual legislation. But we are not so sure that Mr. Carlisle's, or his friends', declarations will be carried out. The protectionists throughout the country are already becoming alarmists as to the effect of any further lowering of the tariff. Particularly is this the case with the iron and steel men. They are looking for the removal of the tobacco taxes as a necessity for their salvation, and there is no doubt that a great pressure will be made for their abolition. It remains to be seen how Mr. Carlisle and his followers in the House will withstand this pressure.

Judge Kelley can be relied upon to urge the abolition of the tobacco taxes unceasingly, and there may be enough protection Democrats to join a Republican policy to keep up the tariff by reducing or abolishing the internal revenue.

There will be no definite policy formulated until after the holidays, but then, without doubt, "the music will begin."—*U. S. Tobacco Journal.*

J. B. J. Portal, the well known viticul tur ist of San Jose, writes in reference to Rixford's "Wine Press and Cellar" obtained from this office. "I find it full of valuable information to wine growers." Every vineyard owner or wine maker in the State who has not a copy of this work should send us $1.50 by postal note or in one-cent stamps and we will mail him the book by return.

To Hawaiians.

After January 1st, 1884, postage of fifty cents will be added to the subscription price of the MERCHANT, making the cost to Hawiian Island subscribers $3.50. We do this in consequence of the change in the rate caused by the Hawaiian Kingdom entering the Postal Union.

Overdoing the Wine Business.

The Cloverdale *Sentinel* says: "The MERCHANT claims that there is an increased demand for our wines in the East. We some time ago pointed out a falling off in the demand instead of an increase, and we see that Colonel Clayton, in the last issue of the *Wine and Fruit Grower*, published in New York, shows that up to November 1st there was a falling off in receipts of California wine at New York, for the year ending at the date mentioned, of 100,000 gallons compared with 1882, and 175,000 gallons compared with 1881, and the Colonel also reiterates his assertion that California wines are being injured in the Eastern market by large quantities of "crooked," "split" and "pasturized" wines, and further points out that many Eastern wines are pure and good, of fine quality and color, and are easily sought after. So, we say, vine-planting is being overdone because vines are planted that will not produce good wines, because soils and situations are being used that nature never fitted for the production of grape vines; because men are planting vines who have not considered the cost of bringing these vines into bearing, and who will wake up some morning and find a big oil plant on their hands; because many men are planting vines without considering that the grower may have to make up his own crop to save it, and because in such a crisis, time, ignorance of wine-making, and finance may raise obstacles practically insurmountable; because many men are planting vines who cannot afford to hold a crop, and panic when it seizes them will spread to others; because our vintners do not consider the fact that wine is made in the East, or if they do they consider it all adulterated stuff, when in fact much really good wine is made there, and the quantity is increasing rapidly, because adulteration, imitation and fabrication are permitted by our laws; because the question, Where will we get the laborers to till our vineyards and to harvest our crops ere they spoil or deteriorate, remains to be answered; because there is such a thing as railway and steamship lines between our cellars and market, which by exorbitant freightage charges blockade the well-being of California viticulture; because wine is not a national beverage; because it will be a hard struggle and a long one to replace whisky and beer with wine; because such replacement must be the result of an education of the people to an appreciation of the merits of wine, and long before that education is realized the day of over production will have dawned; because no effort is being made by the grape-growers, the parties most interested, to make wine a national beverage, neither they nor their hired hands using it at table, nor at bar; because no wine is to be found free on the hotel tables of wine centres, and because exorbitant charges are made for a glass of native wine at all bars throughout the State, and in the majority of saloons only the inferior grades of native wine are carried in stock.

Our friend of the *Wine and Fruit Grower* is taking into account only the shipments by the Pacific Mail steamers to New York and overlooking the shipments by rail to other states. It will take some judgment, labor and capital to market the crop of the future but it will be accomplished.

Consumers charge all the faults of adulteration to the grocer, and yet the strongest advocates of purity of goods are the grocers. They are doing their best to put down the nefarious system, and were it not for their efforts matters would be worse. They refuse all articles suspected, but it is impossible for them to distinguish between good and bad at all times.—*Philadelphia Cash Grocer.*

AD MAJOREM
GLORIAM BONI VINI.

The undersigned having enlarged his business, has opened a branch office at No. 321 Montgomery Street, where information can be obtained concerning viticultural and horticultural lands, and where orders for vines and vine cuttings will be received, as well as at the old office, No. 111 Leidesdorff Street.

Having accomplished nearly all that is necessary to be done in establishing a flourishing colony of wine producers in the Livermore Valley, I shall now devote my attention especially to the development of the Viticultural and Horticultural resources of San Diego County, which county is one of the most promising in the State.

Information may be had at this office concerning the remarkable offering of the

EL CAJON LAND COMPANY.

And selections of land and subscriptions to the stock of the Company may be made through this agency. This Company controls 27,000 acres of land in the richest part of San Diego County, where the finest raisins in the State are now made, and where nearly all kinds of fruit, particularly the apricot, pear, apple and olive, are raised to perfection without irrigation, and where, in proper sites, the orange and lemon are successfully grown with such slight irrigation as may be provided by means of windmills. The property commands ample means for irrigation whenever its settlers may desire to use the same.

This property is being subscribed for at an average price of less than $10 per acre to the stockholders; 2500 acres of choice land, platted and laid out with broad avenues, will be immediately allotted to subscribers in severalty. This tract of platted land is worth and has been selling for $100 per acre, but it is included in the whole tract at the average price; 10,000 acres of the whole tract are arable; the balance grazing lands.

THE DIRECTORS

Of this Company will soon be announced officially, as follows:

ARPAD HARASZTHY, President,

DR. JOSEPH JARVIS, Vice-President,

GEORGE WEST,

GEORGE A. COWLES,

CHAS A. WETMORE.

The Trustee, during the subscription to the stock, is Mr. Bryant Howard, the cashier of the Consolidated Bank of San Diego. Wm. B. West, Esq., who has made special studies in viticulture and horticulture and who has studied raisin-making in Spain, as well as in this State, is a subscriber to the stock of the Company and will devote considerable time during the coming Winter at the San Francisco office of the Company, for the purpose of giving information to those who may desire the same, concerning the prospects of this enterprise. Prof. Frederico Pohndorff has engaged a portion of the land and stock with the object of establishing an olive orchard.

Those who subscribe early and make early selections of the platted land will never regret doing so. It is expected that all the land will soon be taken up. Samples of fruit, raisins and wine, raised in the El Cajon Valley, can be seen at this office; also maps and the plan of the subdivided tract.

Those desirous of purchasing a large tract of land—say 10,000 acres, part grazing and part arable—partly the finest alfalfa land, can find a good opportunity, if applied for soon, as the company can dispose of that much for each in one body in terms that will be most advantageous.

CHAS. A. WETMORE,
No. 111 Leidesdorff street,
Branch office:
No. 321 Montgomery st.,
San Francisco.

For information address also:
GEO. WEST, Stockton.
DR. JOSEPH JARVIS, San Diego.

THE WINE MARKET.

There have been more sales of cellars made this season than ever before at this period of the year. Indeed it would appear that three-fourths of the cellars in the Bay counties as well as Fresno and Sacramento, are sold, and certainly three-fourths of the larger ones are already contracted for. Some St. Helena men say the prices paid this year have been from one to two cents higher than last year, but where here can only get positive information of a few cellars fetching one cent higher than last year, and none of more. Some have sold same as last year and none at less excepting where the quality was inferior. The average price so far we judge has been fully a cent more than '82. If we are wrong, the fault lies with our subscribers, who in spite of our repeated invitations will not report exactly the prices at which they have sold.

Landsberger & Curtis, wine brokers of this city, have obtained for R. Wheeler, of St. Helena, the highest price to our knowledge paid this season, but Mr. Wheeler's wines consisted of choicest varieties only.

Judging by the actions of the largest importers merchants and manufacturers in other lines of business, we believe our wine makers would do well to place their merchandise in the hands of competent and conscientious brokers, who would realize more for them net, that is after deducting commission, than they could obtain themselves. These most useful middlemen would also attend to collection and delivery, and being posted in business forms and witnesses as to transaction, would in case of differences be found most useful. The large coffee, sugar, rice, coal, and iron importers and those in twenty other lines always employ brokers and find it to their advantage. The broker better than any one else knows the wants of buyers and is a better judge of values. This practice obtains not only in San Francisco, but in New York, London, Hamburg and every other commercial center.

Brandy continues in light demand without sales of any magnitude. In the sale of some wine cellars where owners had small lots of brandy, these were included at about 70 cts per gallon for a fair new article in half barrels.

NAPA VALLEY.

A gentleman who had occasion to make a hasty business trip through the Napa Valley last week, writes for the MERCHANT as follows. It was his first visit to a wine district, and it is needless to say that, though familiar from reading the papers with the general facts concerning our wine product, he was astounded at the extent of the vineyards and the substantial buildings and cellars connected with them.

The first vineyard met with on leaving St. Helena is that of Beringer Brothers These gentlemen have fine rock cellars and are adding substantial improvements to their property. They produced during the past season some 75,000 gallons of wine and about 2,000 gallons of brandy. They have 55 acres of old vines, Zinfandels, Rieslings, Chasselas, etc., and are planting extensively.

Chas. Krug's fine place is next met with. He has some 225 acres planted in vines, 150 acres of which are producing, and intends this season to set out 100 acres additional. He has 50 acres in Riesling, 30 acres in Zinfandel, and the remainder in Golden Chasselas, Sauvignon Vert, etc. Mr. Krug has a very large and well-appointed wine cellar, to which he will shortly make large additions. In it are at present stored about 400,000 gallons of wine, of various ages and many varieties. The wine yield this year was 209,500 gallons. Mr. Krug does a very large business direct with dealers throughout the Union.

Mrs. J. C. Weinberger is the owner of a fine vineyard a little north of Mr. Krug, on the opposite side of the valley. Here are 100 acres in vines, about one-half being productive. Preparations are being made to put in 30 acres more. The wine product amounted to 40,000 gallons and that of brandy to 1,000 gallons.

Across the road is the cellar of J. Laurent, with a record of 70,000 gallons of wine and a few hundred of brandy. His vineyard consists of 50 acres, about one-half bearing.

The next vineyard of any consequence is that of Mr. W. W. Lyman, several miles north. He has a vineyard of 65 acres, chiefly young vines, planted in the standard varieties.

A short distance farther on we take a very pleasant and picturesque side road to the left, and a ride of a couple of miles brings us to the mountain vineyard of Jacob Schram. This gentleman has in his rock-excavated wine cellar some 100,000 gallons of wine, 35,000 gallons of which are from this year's vintage. He does a large business direct from his cellar with jobbers, hotels, clubs, etc., and his prosperity is shown by many solid improvements he is making. He is talking of putting in an orange orchard, as fruit has been obtained from one of his few trees that measured seventeen inches in circumference. The persimmon and other fine fruits grow readily at this place, which is situate at quite an elevation above the valley.

Surrounding Calistoga the vineyards are mostly small, a notable exception, however, being in the vineyard of A. L. Tubbs, President of the Napa Valley Wine Company, who has now 135 acres in young vines, all being of the finest European varieties.
